

CRAFT-JZ AI MAKER FOUNDRY NETWORK

Three zones, two wings, an AI maker ecosystem, and an open testbed / concept proposal, reference scheme, provisional
Official boundary, cooperation, approvals, funding, ownership, trademarks, and real-world data are not fabricated; this is not statutory planning, engineering, or an implementation commitment.

CRAFT-JZ AI MAKER FOUNDRY NETWORK

One spine / three foundries / two wings / spatial-AI-operations loop

EAST-WEST STITCH / NORTH-SOUTH CONNECT

Conceptual cooperation and public-realm loop; no new road, rail, bridge or tunnel conclusion

THREE ZONES / TWO WINGS / THREE NODES

Node cards connect public interface, AI boundary, operator role, evidence and exit

FORMAL VISUAL METRICS / RECOMPUTATION EVIDENCE

Finite values come from package geometry; other official-control metrics remain unknown

Reader-facing area and ratios are rounded: about 11.41 sq km, about 12.3%, and about 7.3%; metrics.json retains raw geometry values and formulas.

THREE ZONES / TWO WINGS / THREE NODES

Node cards connect public interface, AI boundary, operator role, evidence and exit

LAND AND SPACE COMPATIBILITY MODEL

Conceptual compatibility only; no statutory land-use or development control

Scenes and test protocols

Twelve S01-S12 cards cover booking, tools, courses, mentors, accessibility, history interpretation, exhibition, merchants, anonymous feedback, the testbed, and volunteers. T01-T04 cover benchmarks, data quality, staffed runtime, and reversible making.

FORMAL VISUAL METRICS / RECOMPUTATION EVIDENCE

Finite values come from package geometry; other official-control metrics remain unknown

Spatial-AI-operations loop

A space card defines access, an AI card defines minimal service and the human gate, an operations card defines staffing, notice, and appeal, an evidence card records aggregates, a forum card reviews, and an exit card pauses the prototype when risk, ownership, funding, or baselines change.

WALKING, RAIL, BLUE-GREEN, STAFFED FALLBACK

SPATIAL CARD -> AI CARD -> OPERATIONS CARD -> EVIDENCE CARD -> FORUM CARD -> EXIT CARD

No new alignment or individual tracking; concept interface only

Phasing and boundaries

P0 near term 1-3 years establishes rules, paper routes, and low-risk prototypes; P1 mid term 3-5 years proposes a limited test after written permission; P2 long term 5-10 years discusses a network only when official data, ownership, approvals, funding, and operating evidence are available. All such facts remain provisional, to_verify, or unknown.
