

Brand Identity Concept: PAR-JZ Participation Loop

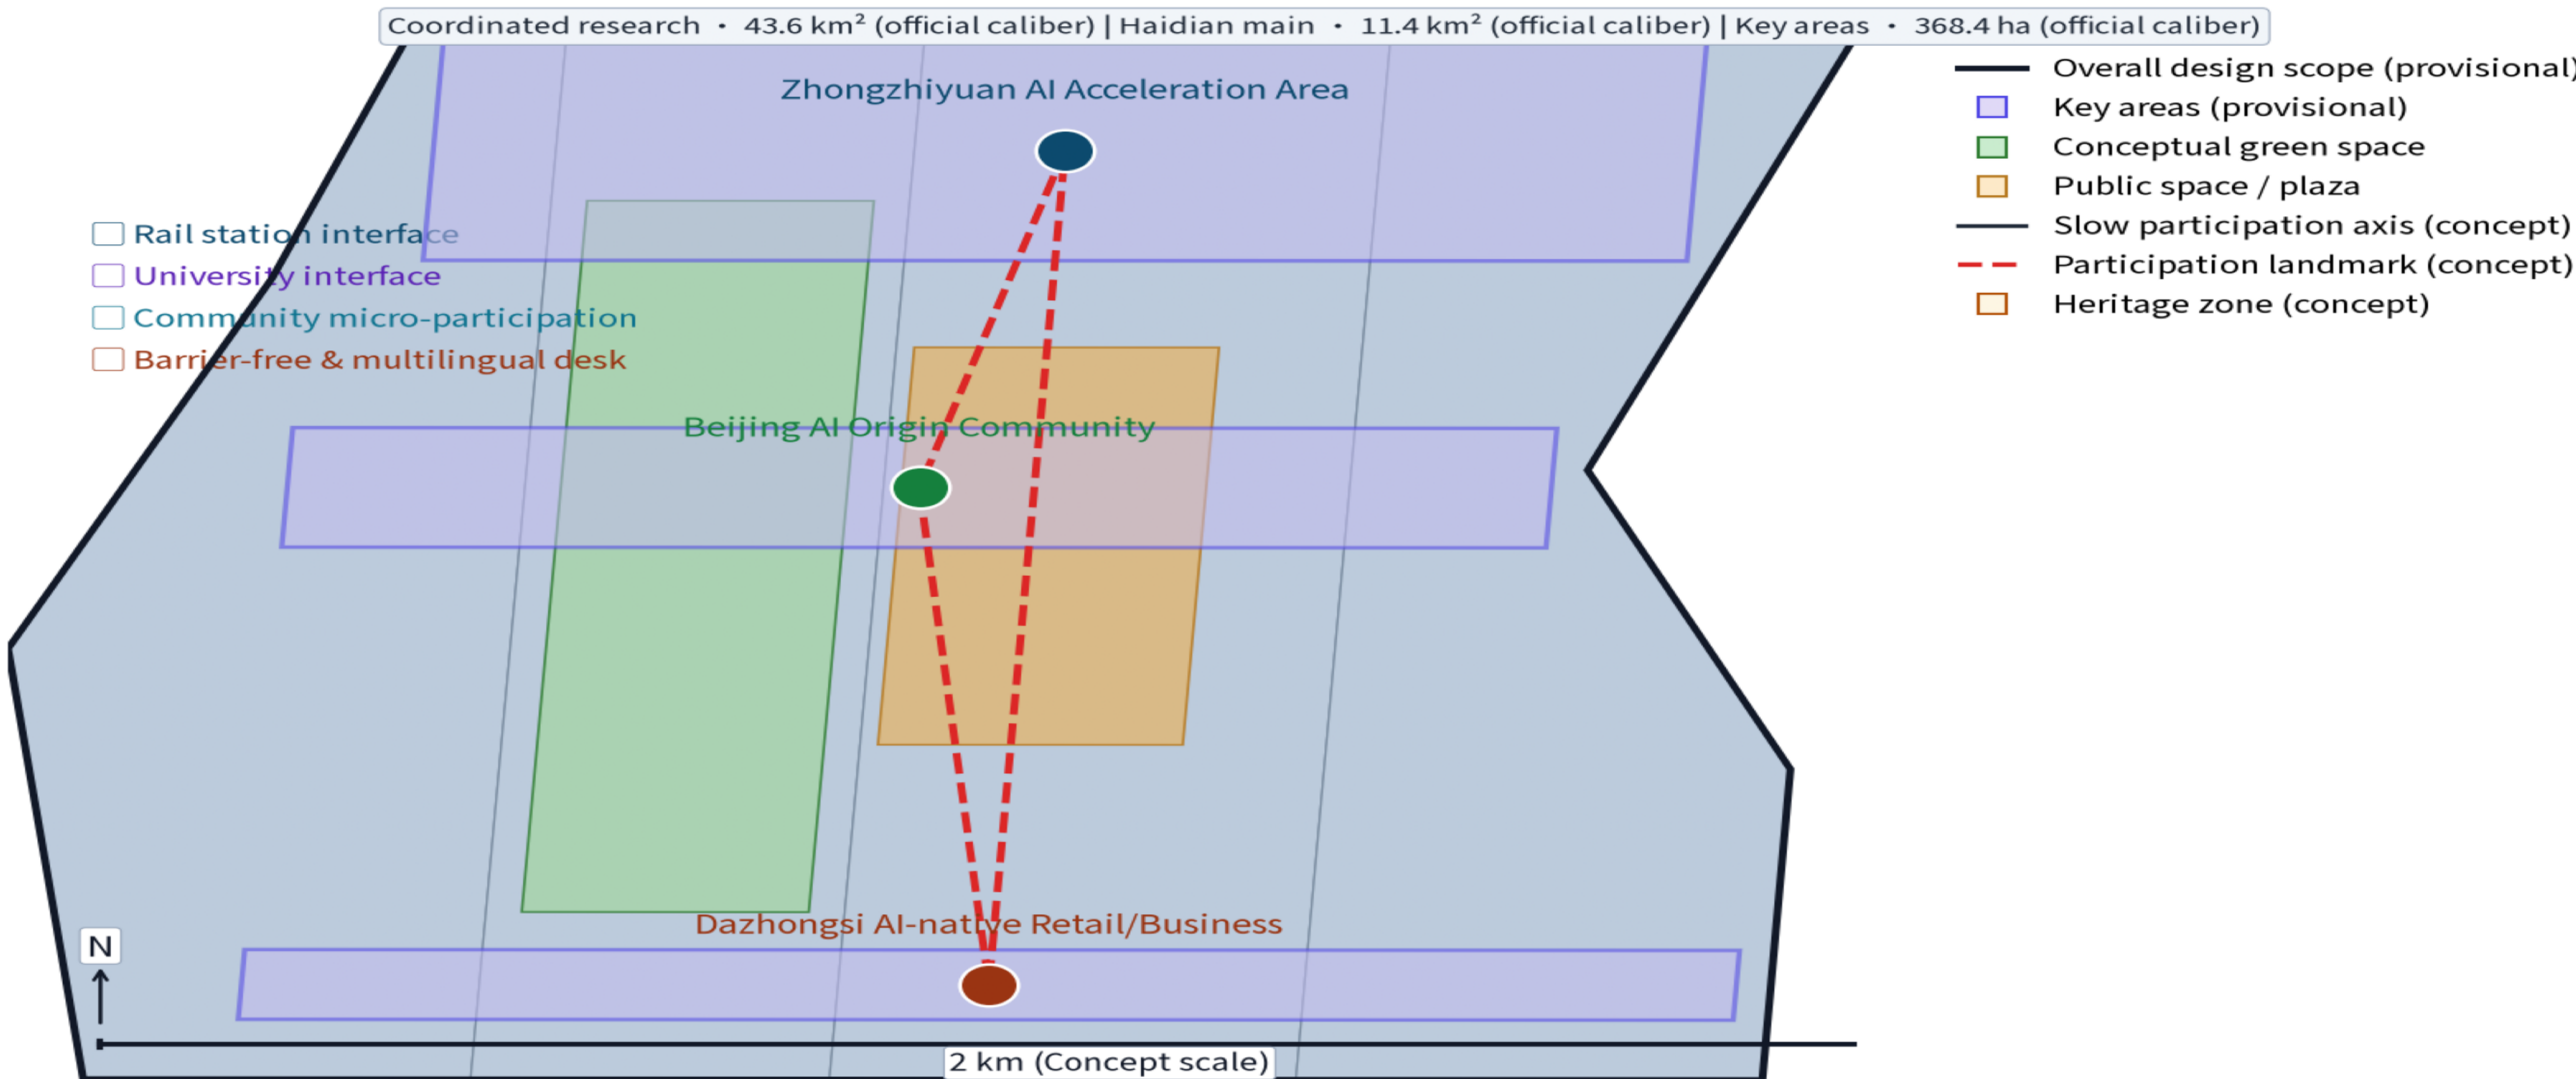

PAR-JZ = Participation • Jing-Zhang

PROVISIONAL boundary • not an official redline • recalculate after official data

Overall Design Overview — Public Participation Sub-Scope (provisional)

Overall Design Overview — Public Participation Sub-Scope (provisional)

PROVISIONAL boundary • not an official redline • recalculate after official data

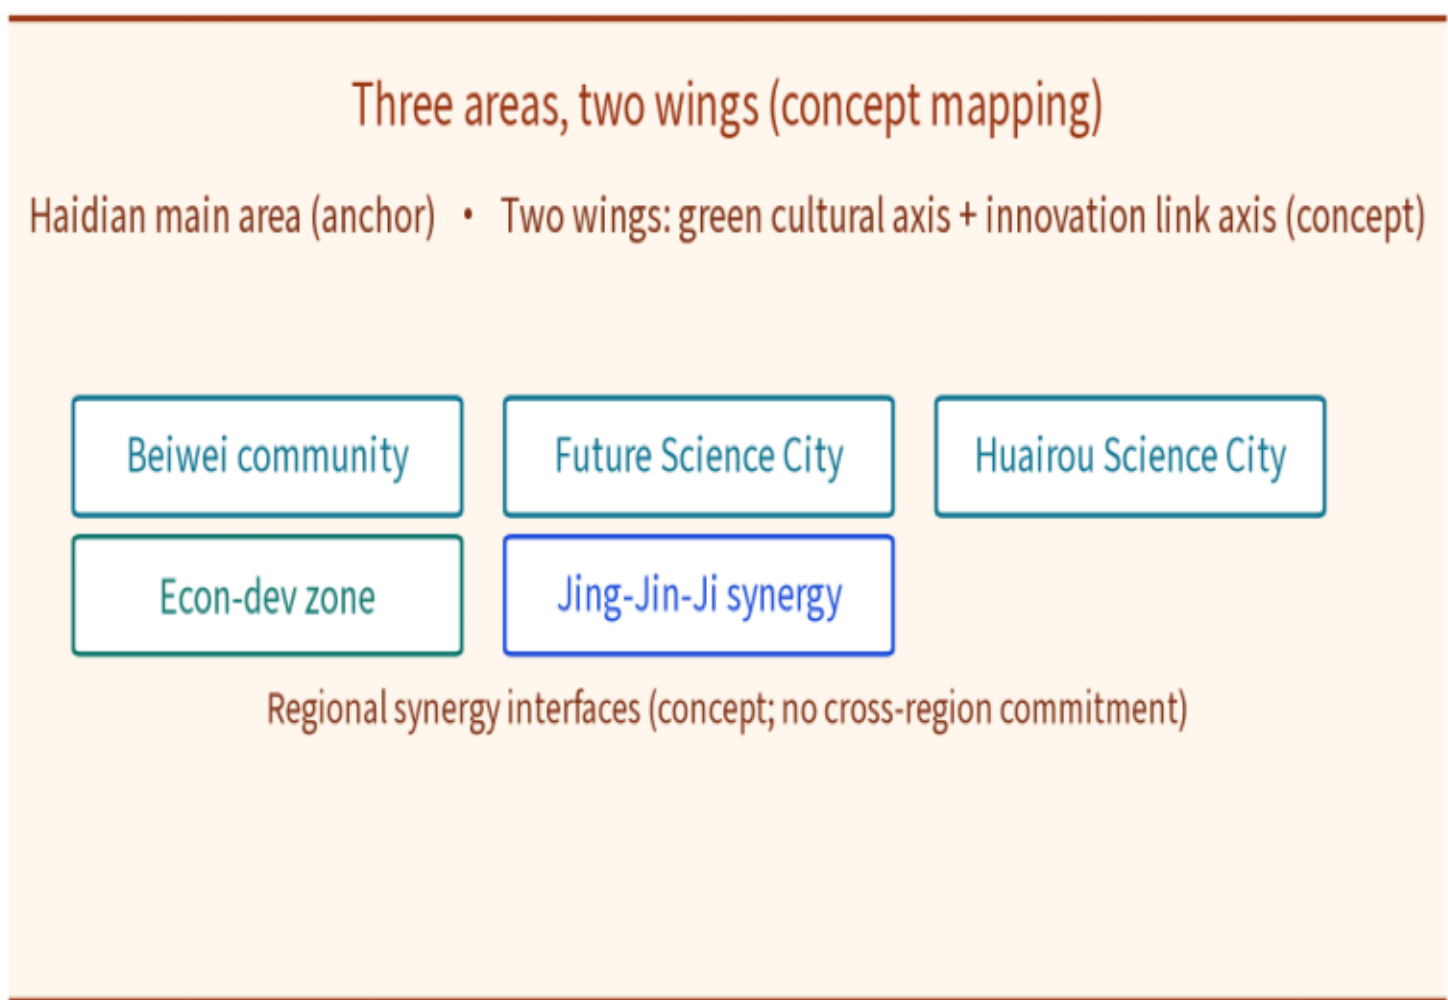

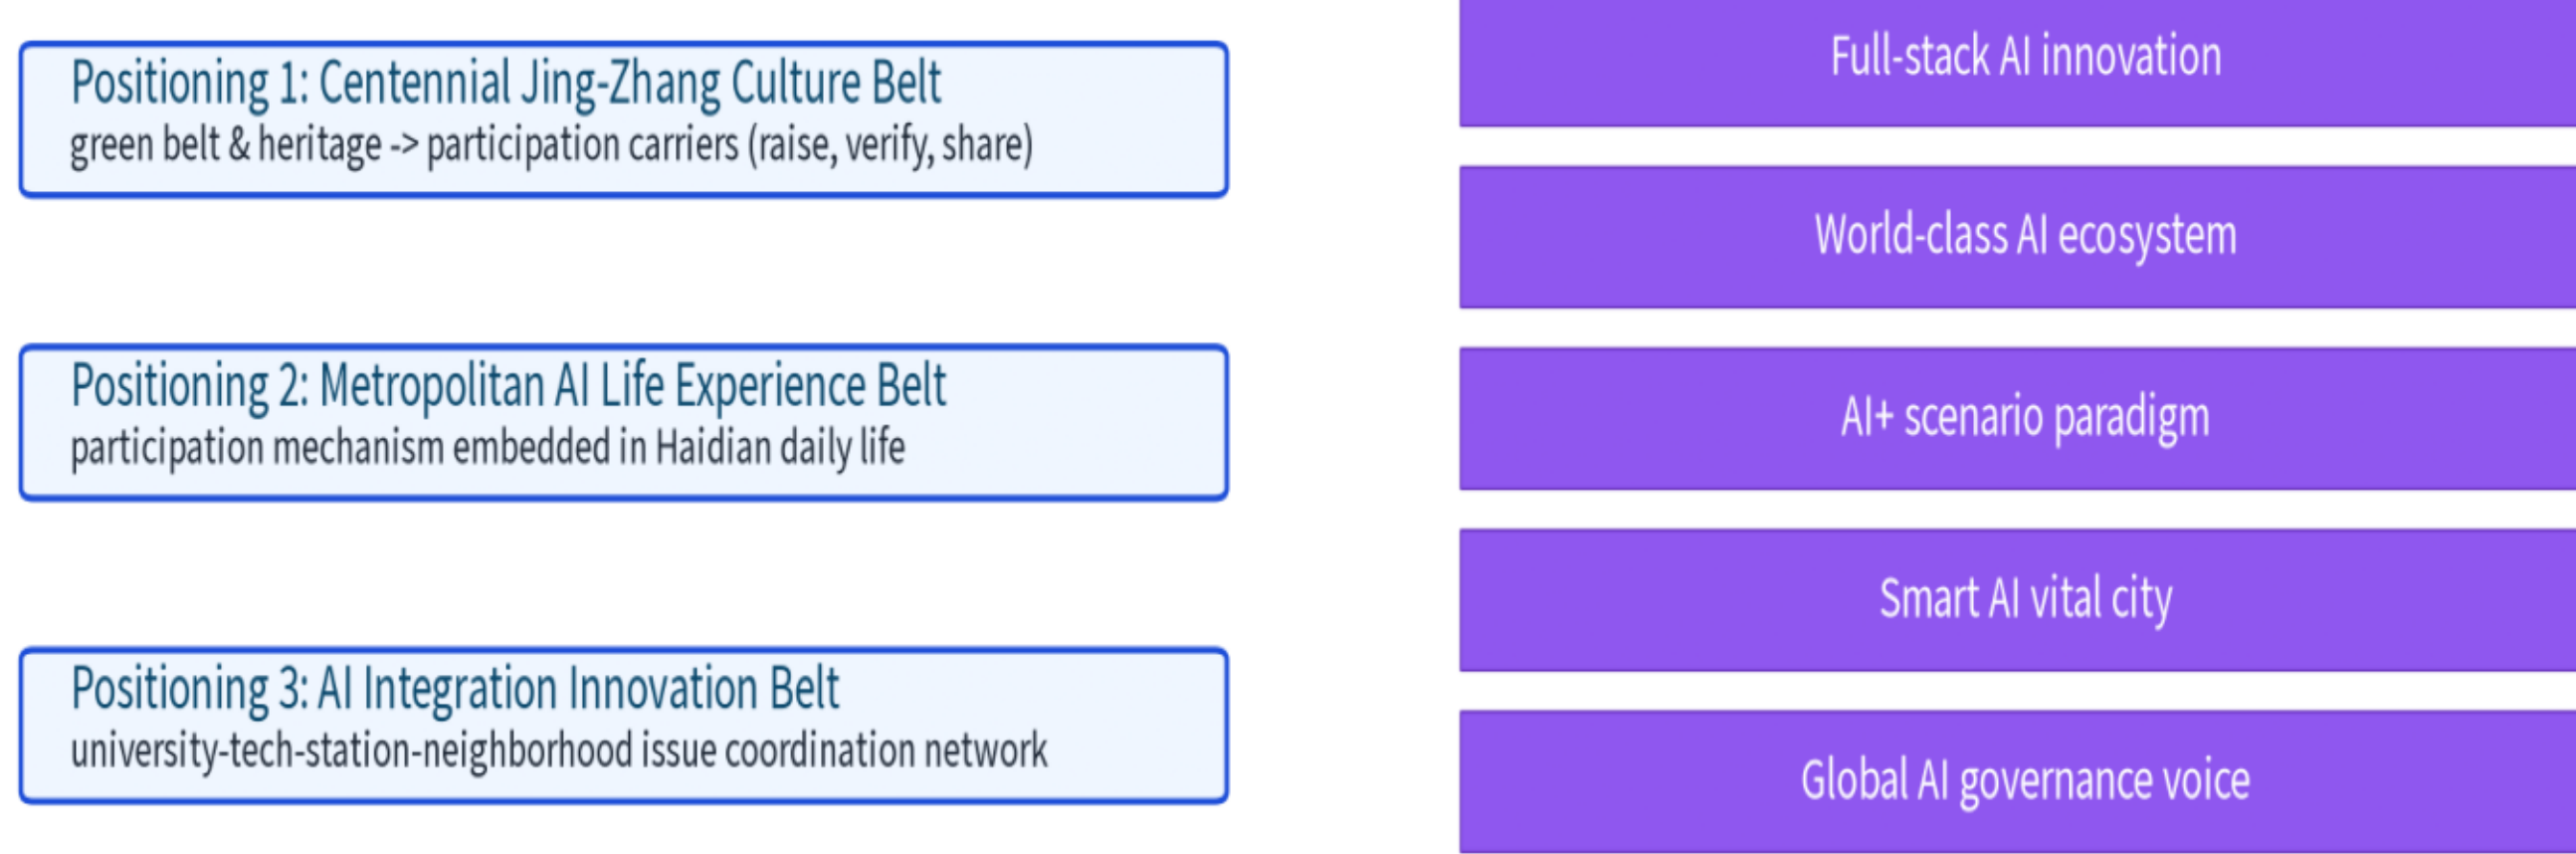

Geometry based on the package's provisional polygons; recalculate when official data is published.

Three-Areas-Two-Wings, Three Positionings & Five Functions Framework

Three-Areas-Two-Wings, Three Positionings & Five Functions Framework

PROVISIONAL boundary • not an official redline • recalculate after official data

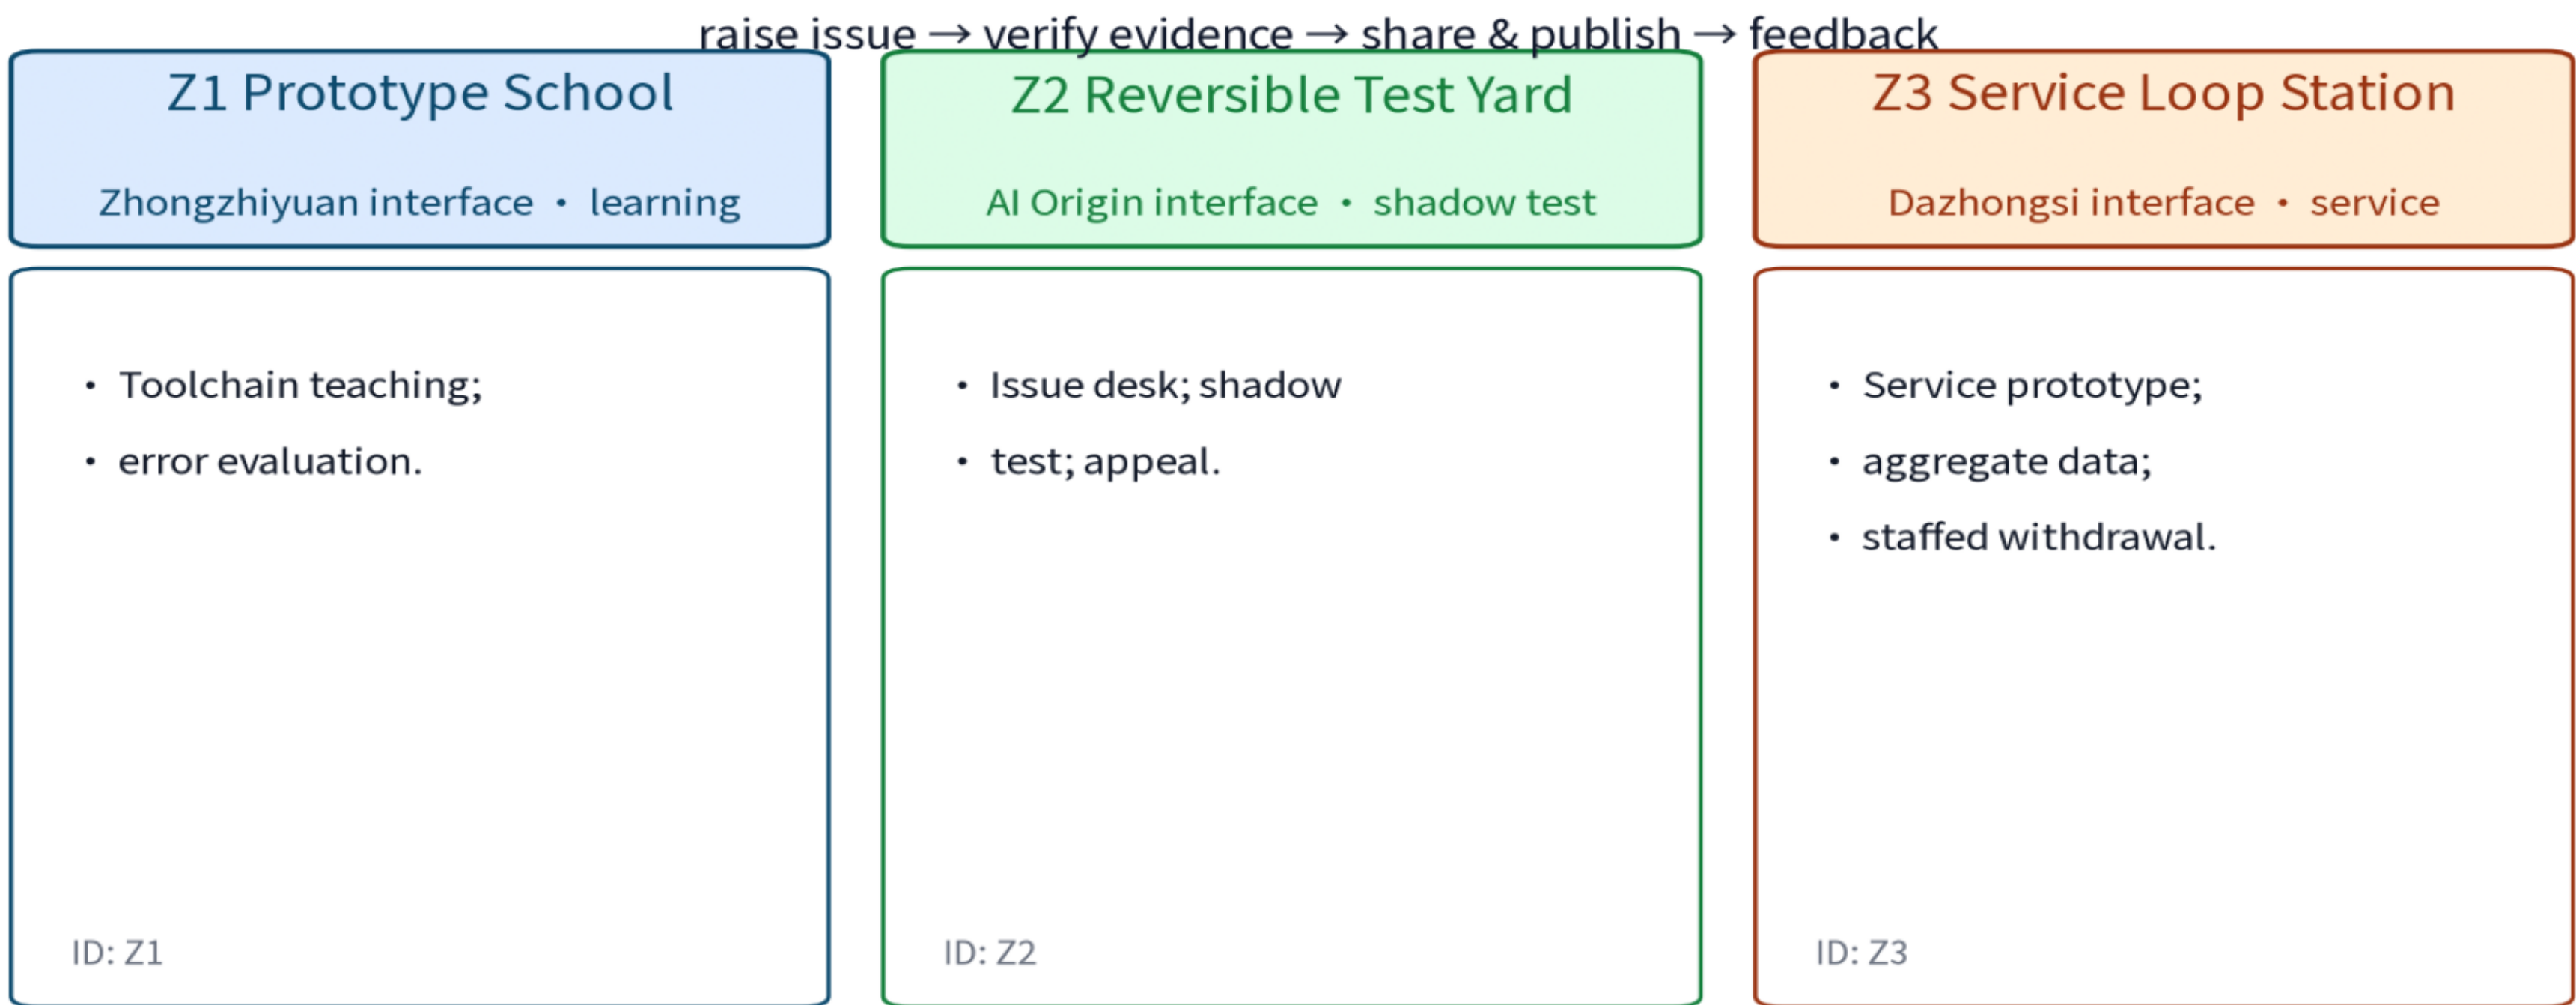

- Inside the overall design area (~11.4 km²)
- Three nodes + continuous slow participation axis
- covenant/assembly/points/publicity/filing
- alliance/volunteer/booking/rotation/grading
- official geometry, heritage/green lines, controls pending
- all pending survey and official-data recompute

Three-Node Index with Differentiated Design Tasks

PROVISIONAL boundary • not an official redline • recalculate after official data

Three-Node Index with Differentiated Design Tasks

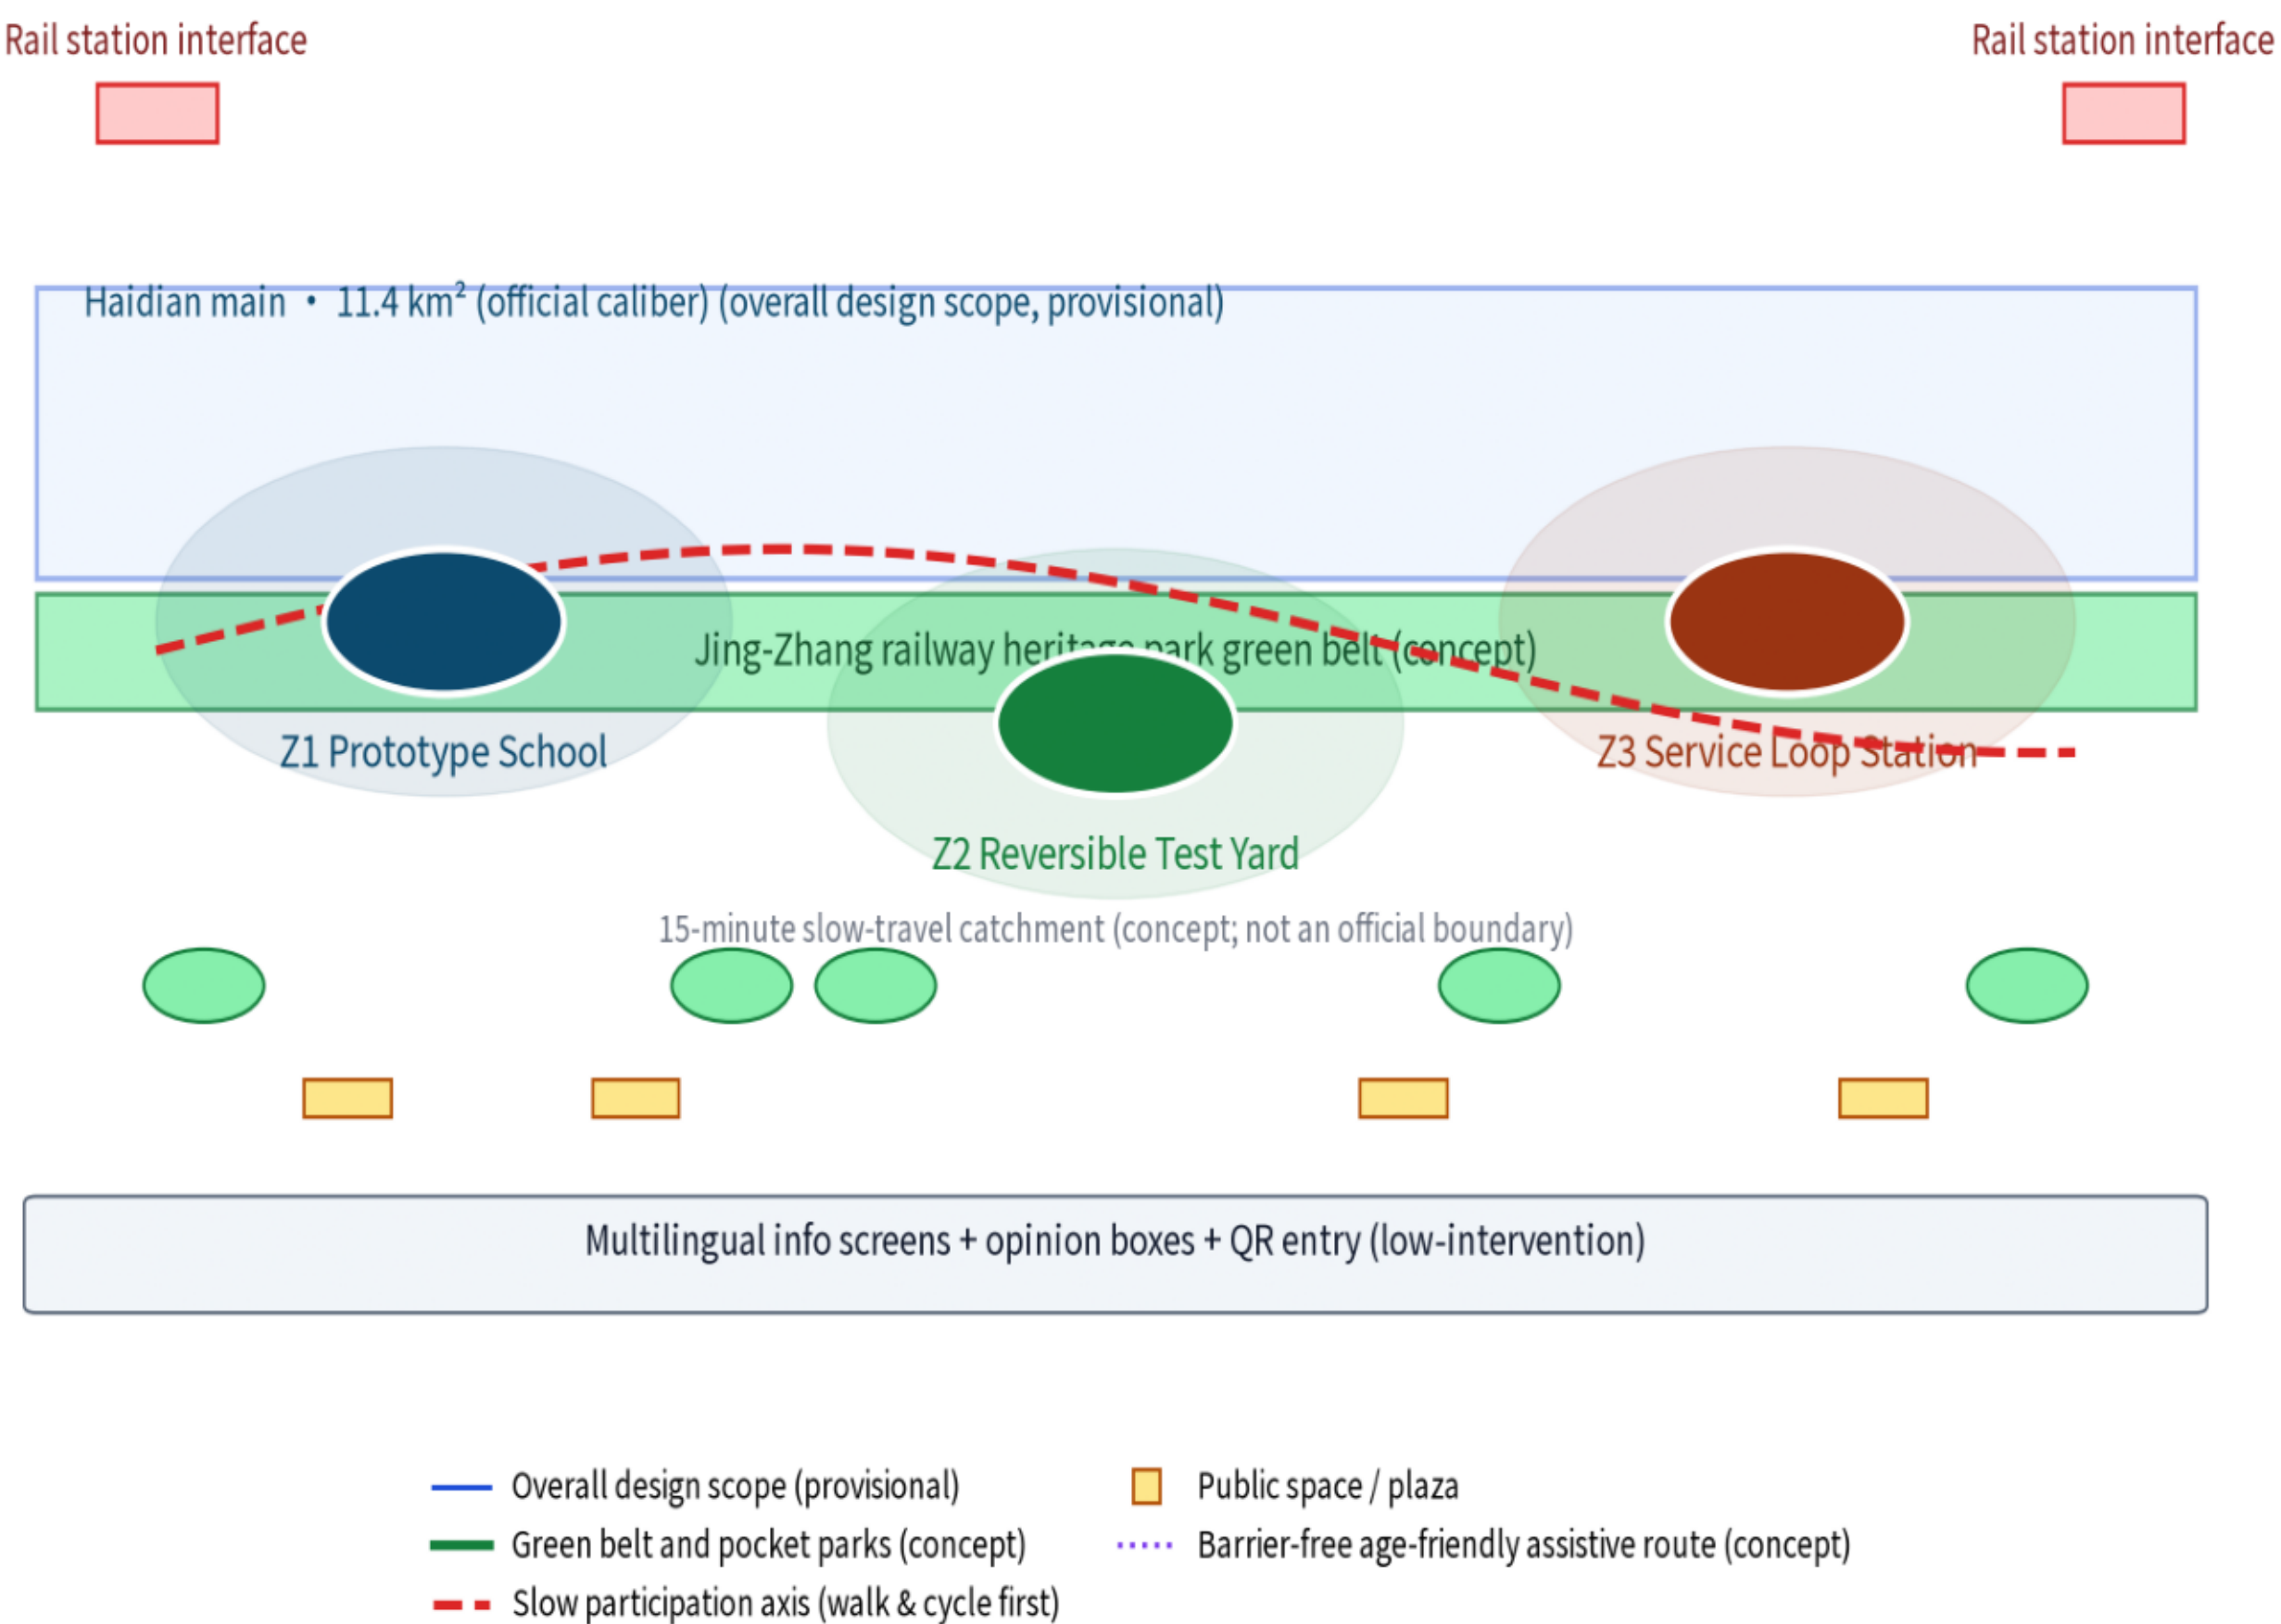

Three nodes differentiated by the three key areas: Zhongzhiyuan, Beijing AI Origin, Dazhongsi; conceptual sites pending official boundary confirmation.

Slow Participation Axis and Blue-Green Network Concept Analysis

PROVISIONAL boundary • not an official redline • recalculate after official data

Slow Participation Axis and Blue-Green Network Concept Analysis

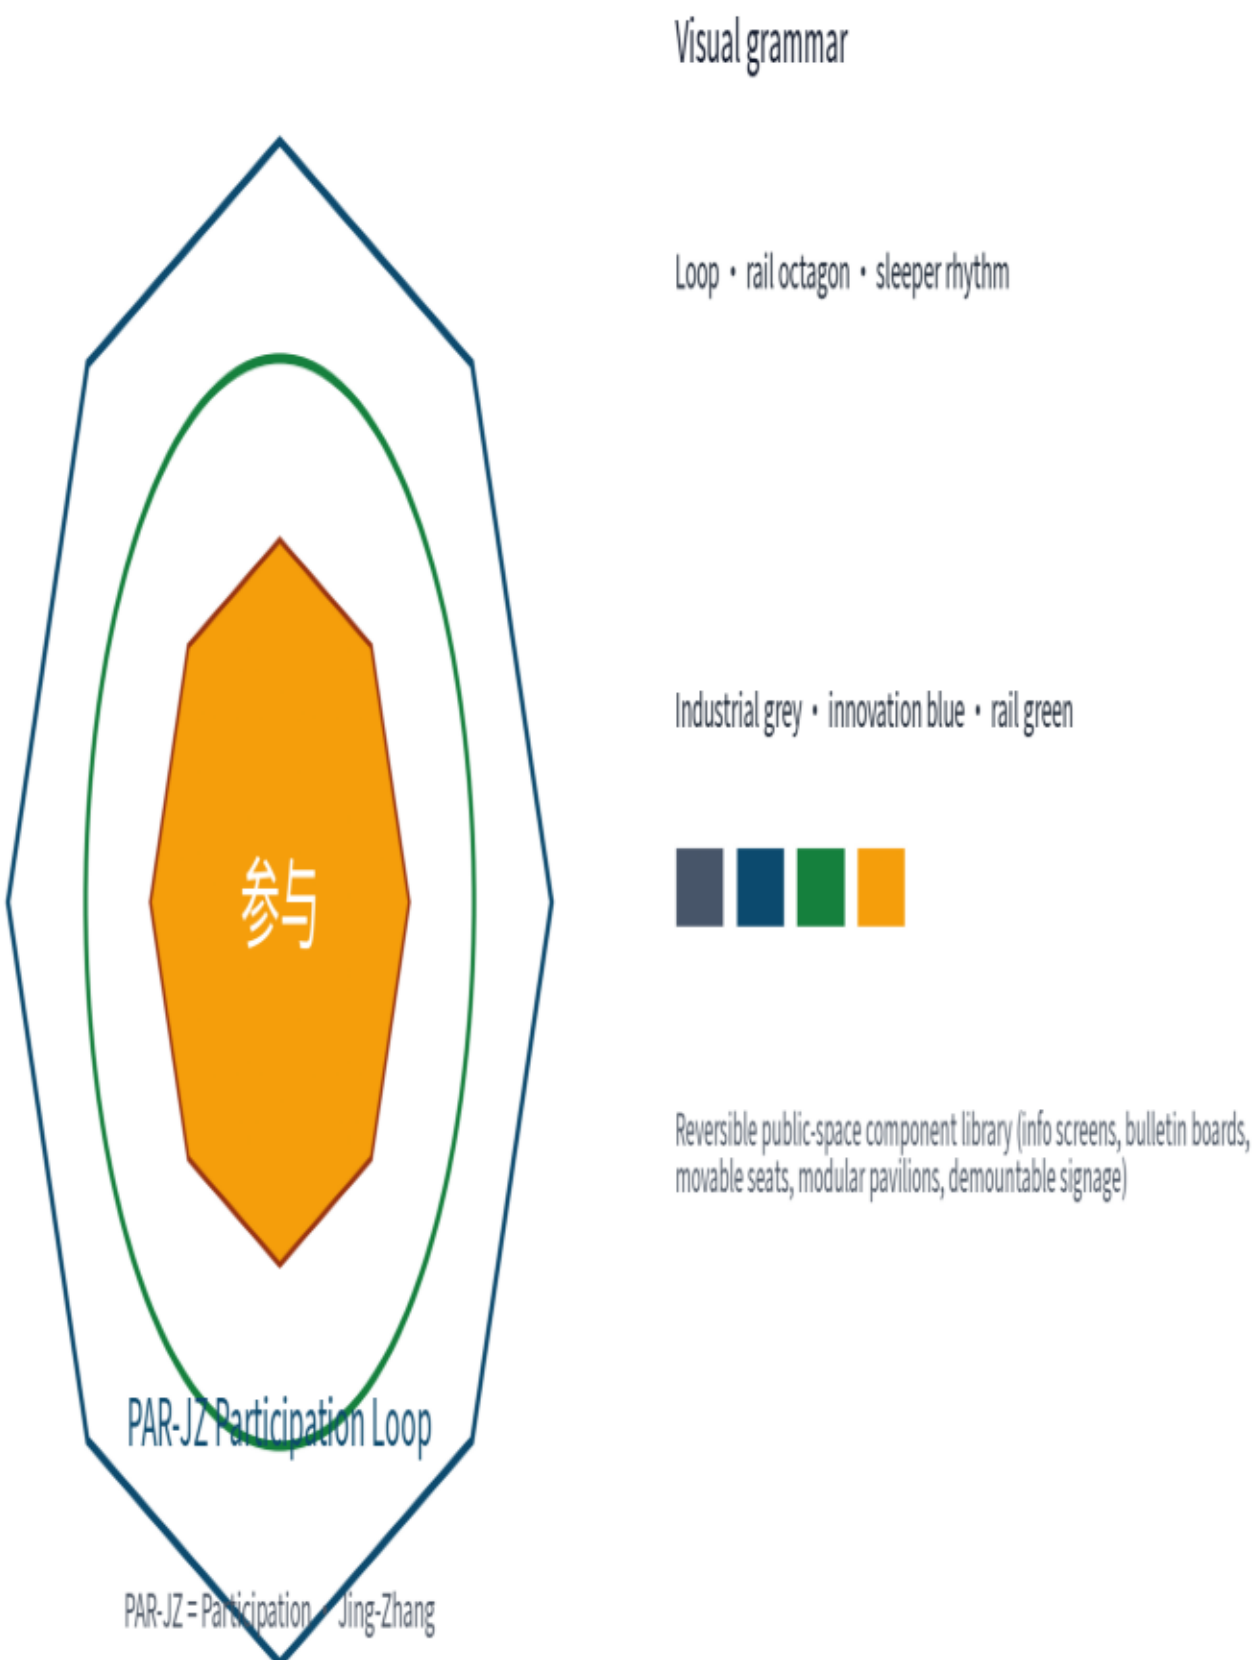

Slow axis threads three nodes; blue-green nodes anchor on the Jing-Zhang heritage park green belt; reversible low-intervention facilities.

Primary palette

Brand Identity Concept: PAR-JZ Participation Loop

PROVISIONAL boundary • not an official redline • recalculate after official data

Logo uses participation loop + railway-spoke octagon (concept); no trademark search completed; treated as internal working codename.

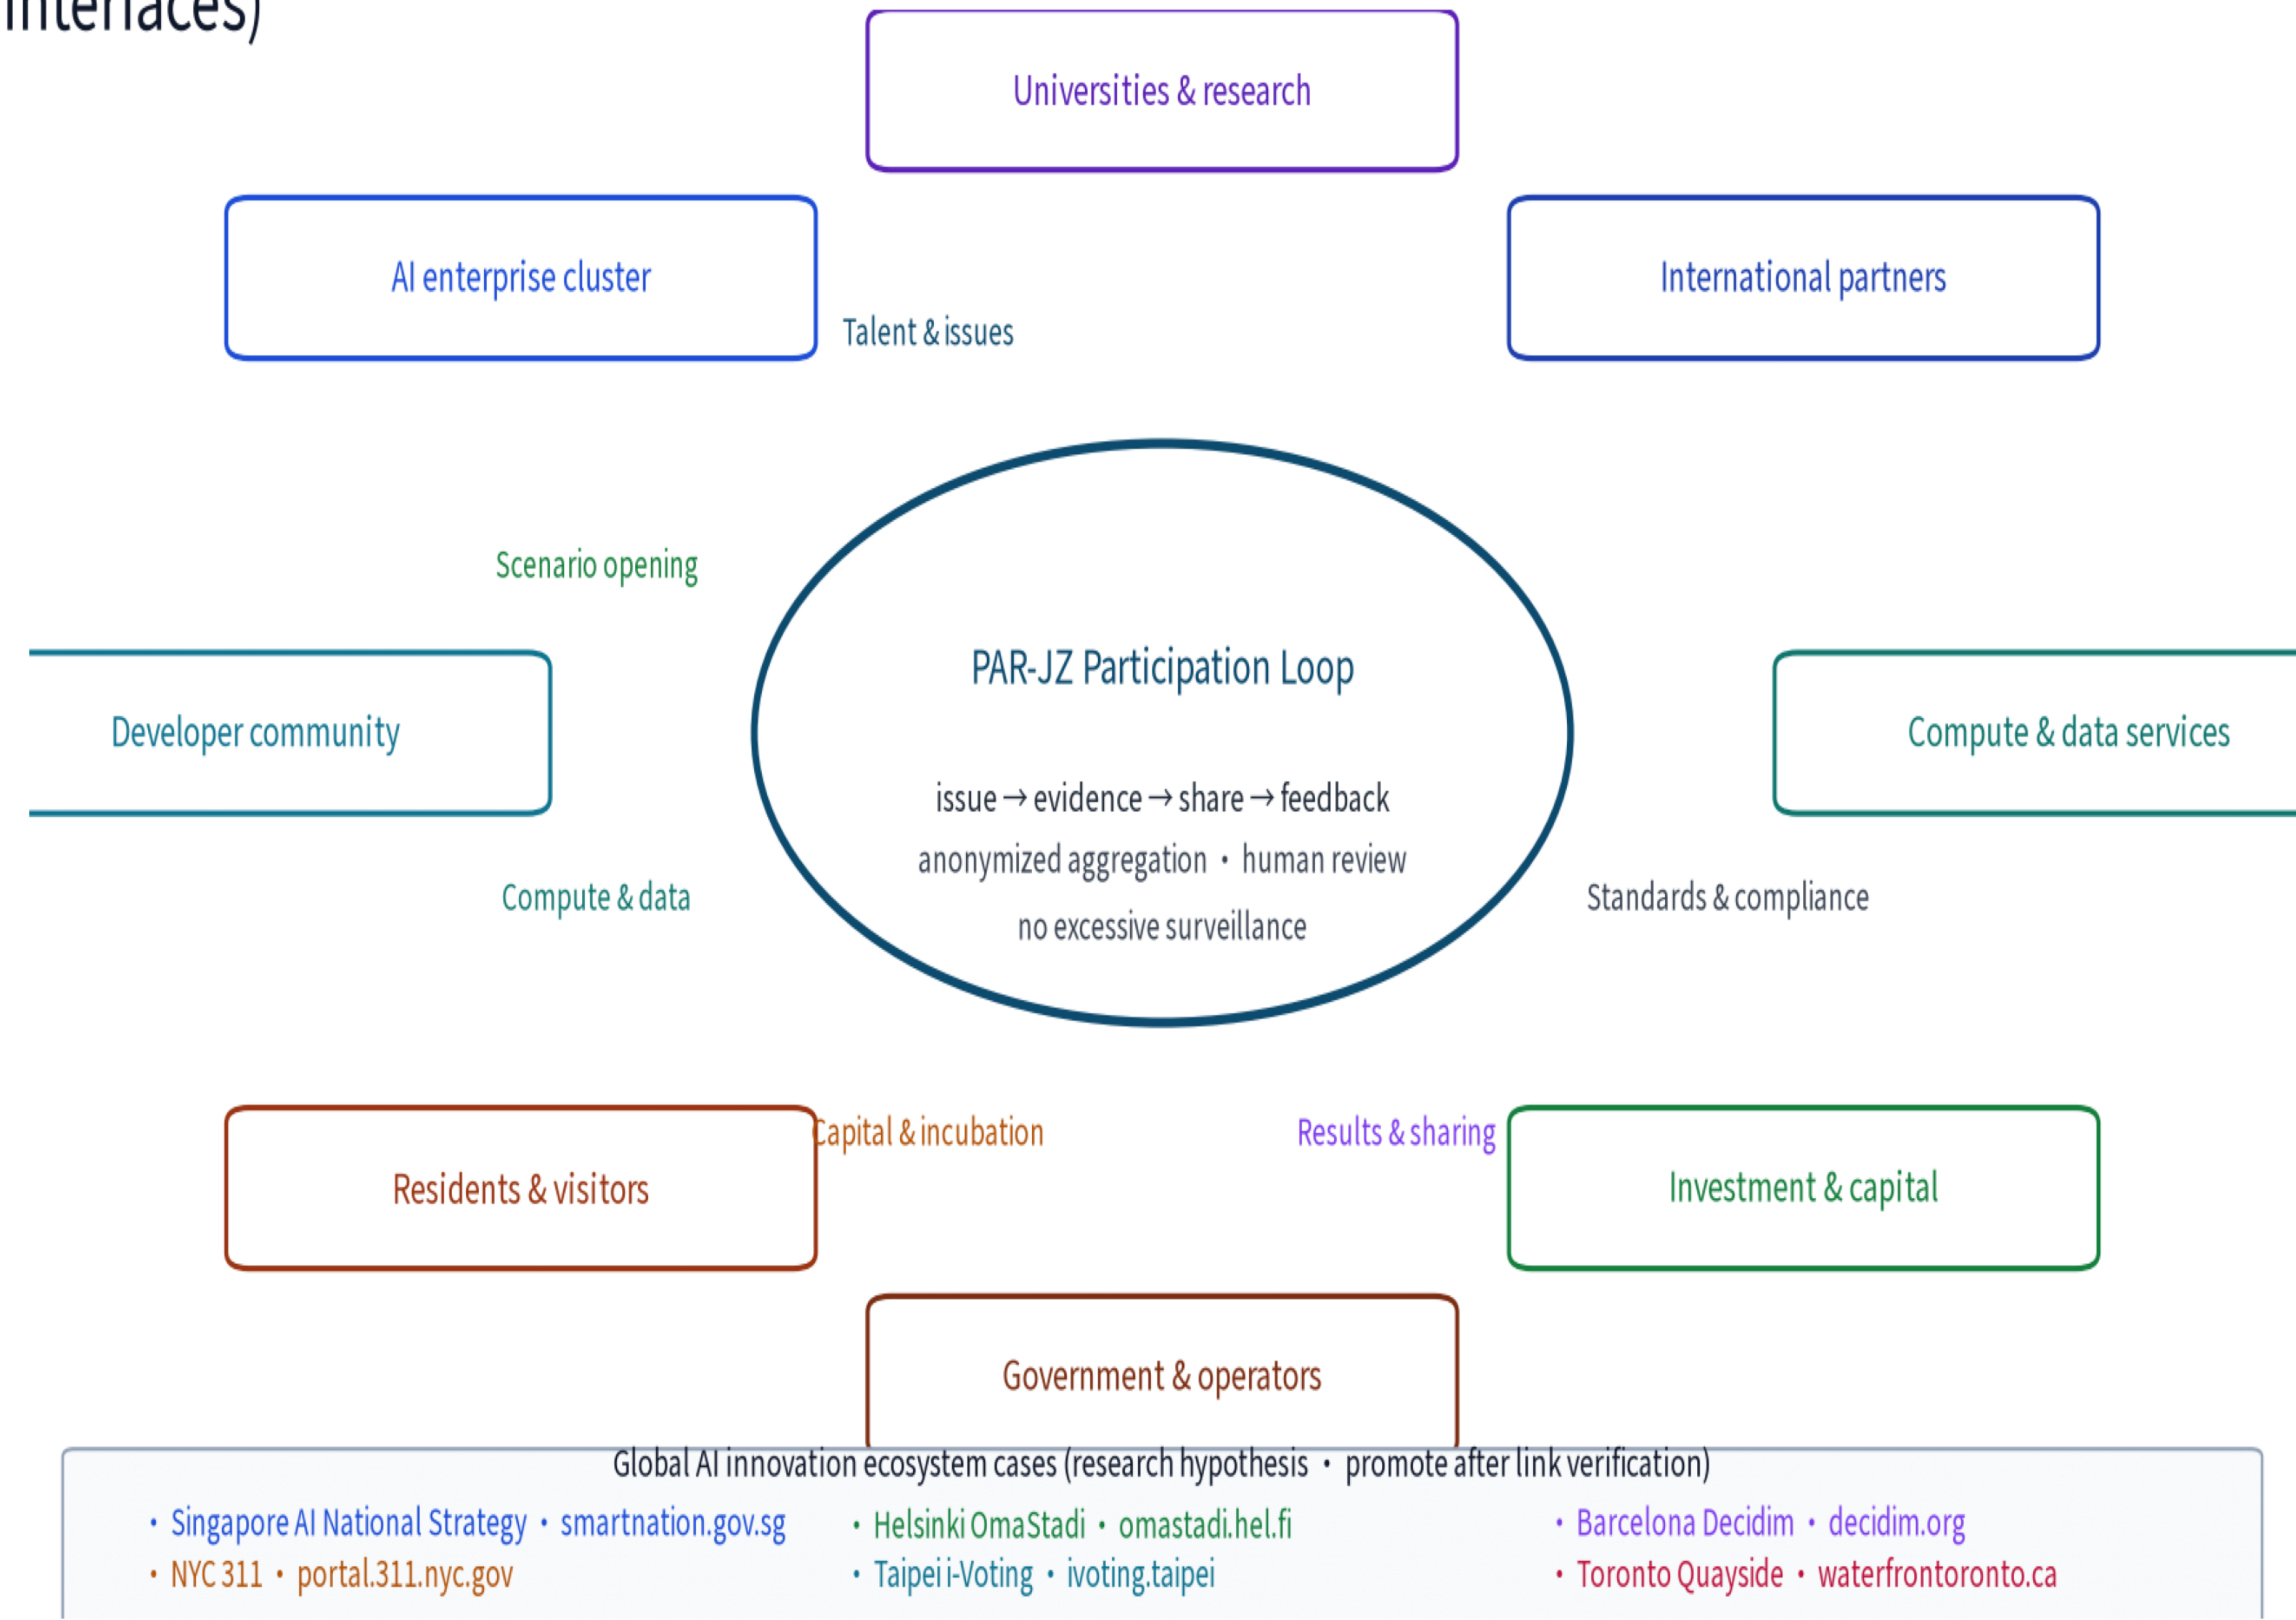

AI Innovation Ecosystem Atlas (actors, flows, open interfaces)

PROVISIONAL boundary • not an official redline • recalculate after official data

AI Innovation Ecosystem Atlas (actors, flows, open interfaces)

Core Metric Evidence Chain (single caliber • recompute trigger)

Core Metric Evidence Chain
(single caliber • recompute
trigger)

PROVISIONAL boundary • not an official redline • recalculate after official data

geometry layer -> formula recompute -> reduced-precision display (provisional)

Metric	Formula / source (conf)	Displayed value (reduced)	Recompute trigger
site_area_sqm	polygon area (provisional, EPSG:4540) conf: low	about 11.4 km ² (participant provisional model)	on official geometry
green_ratio	green_space_area / site_area conf: low	about 12.3%	on official green-line data
public_space_ratio	public_space_area / site_area conf: low	about 7.3%	on official land-use data
Issue response rate	issues answered / issues raised (process) conf: low	no hard target	at annual review
Feedback handling rate	opinions answered / opinions received (process) conf: low	no hard target	at annual review
Share compliance rate	compliant shares / all shares (human sample) conf: low	no hard target	at annual review

All displayed values are reduced-precision concept calibers (participant provisional model data, not authoritative); ratios and counts use separate axes; this is an evidence chain, not a value comparison.
