

Overall design overview

FoodChain JZ | AI food systems & community food-learning belt

FOODCHAIN JZ

Three districts • three kitchens • two wings • two markets • one food-learning loop

CONCEPT / PROVISIONAL

All boundaries, nodes and values are provisional concept models; recalculate after official data release.

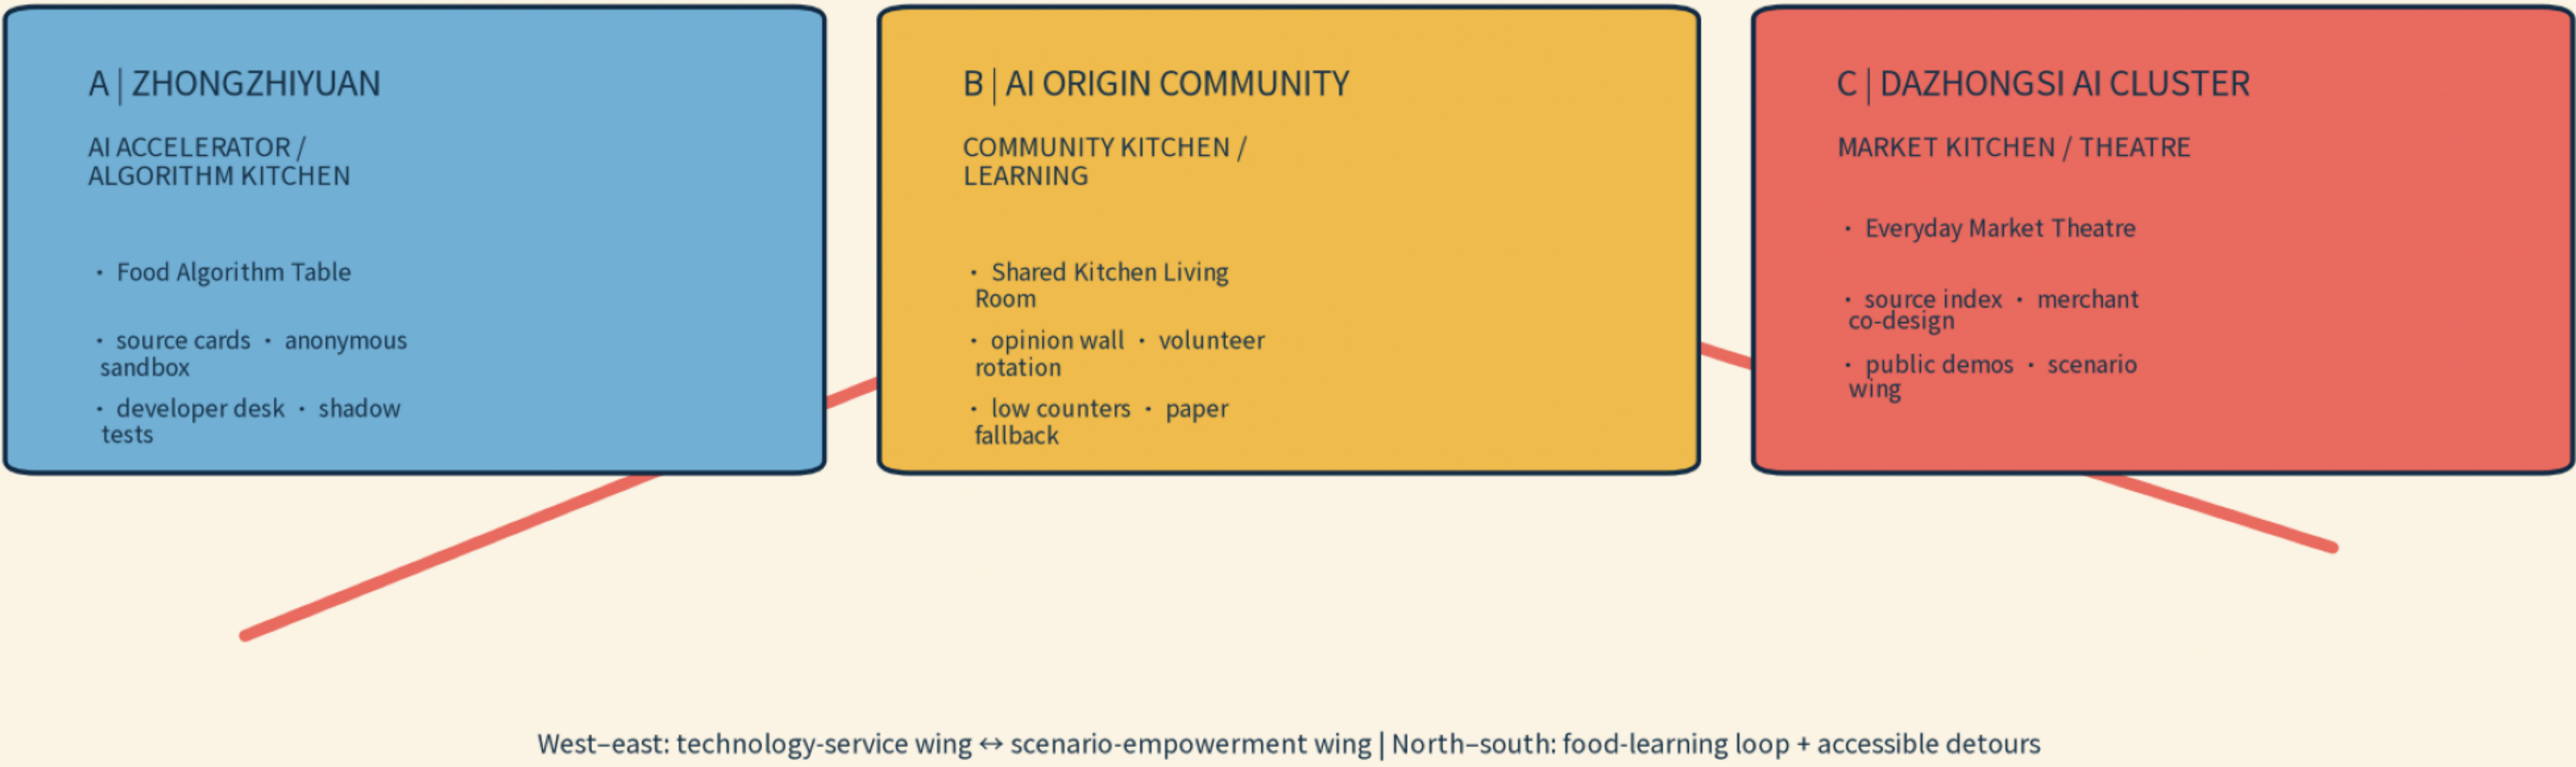

Key areas and three kitchens

Key areas | three districts, three kitchens

FOODCHAIN JZ

Differentiated program: algorithm testing • community learning • market demonstration

CONCEPT / PROVISIONAL

Three key areas are candidate concept locations; not statutory boundaries, title, site decisions or control indicators.

Concept land-use structure

Spatial structure / evidence loop

FOODCHAIN JZ

Strategic • coordinated • validation

CONCEPT / PROVISIONAL

STRATEGY

Culture + everyday AI + integration

Source → human review → public feedback → recalculation

COORDINATION

3 districts / 2 wings / 2 markets

Source → human review → public feedback → recalculation

VALIDATION

12 cards / 3 protocols / a nnuual notice

Source → human review → public feedback → recalculation

One food-learning loop keeps offline, accessible and reversible alternatives.

Slow travel and blue-green space

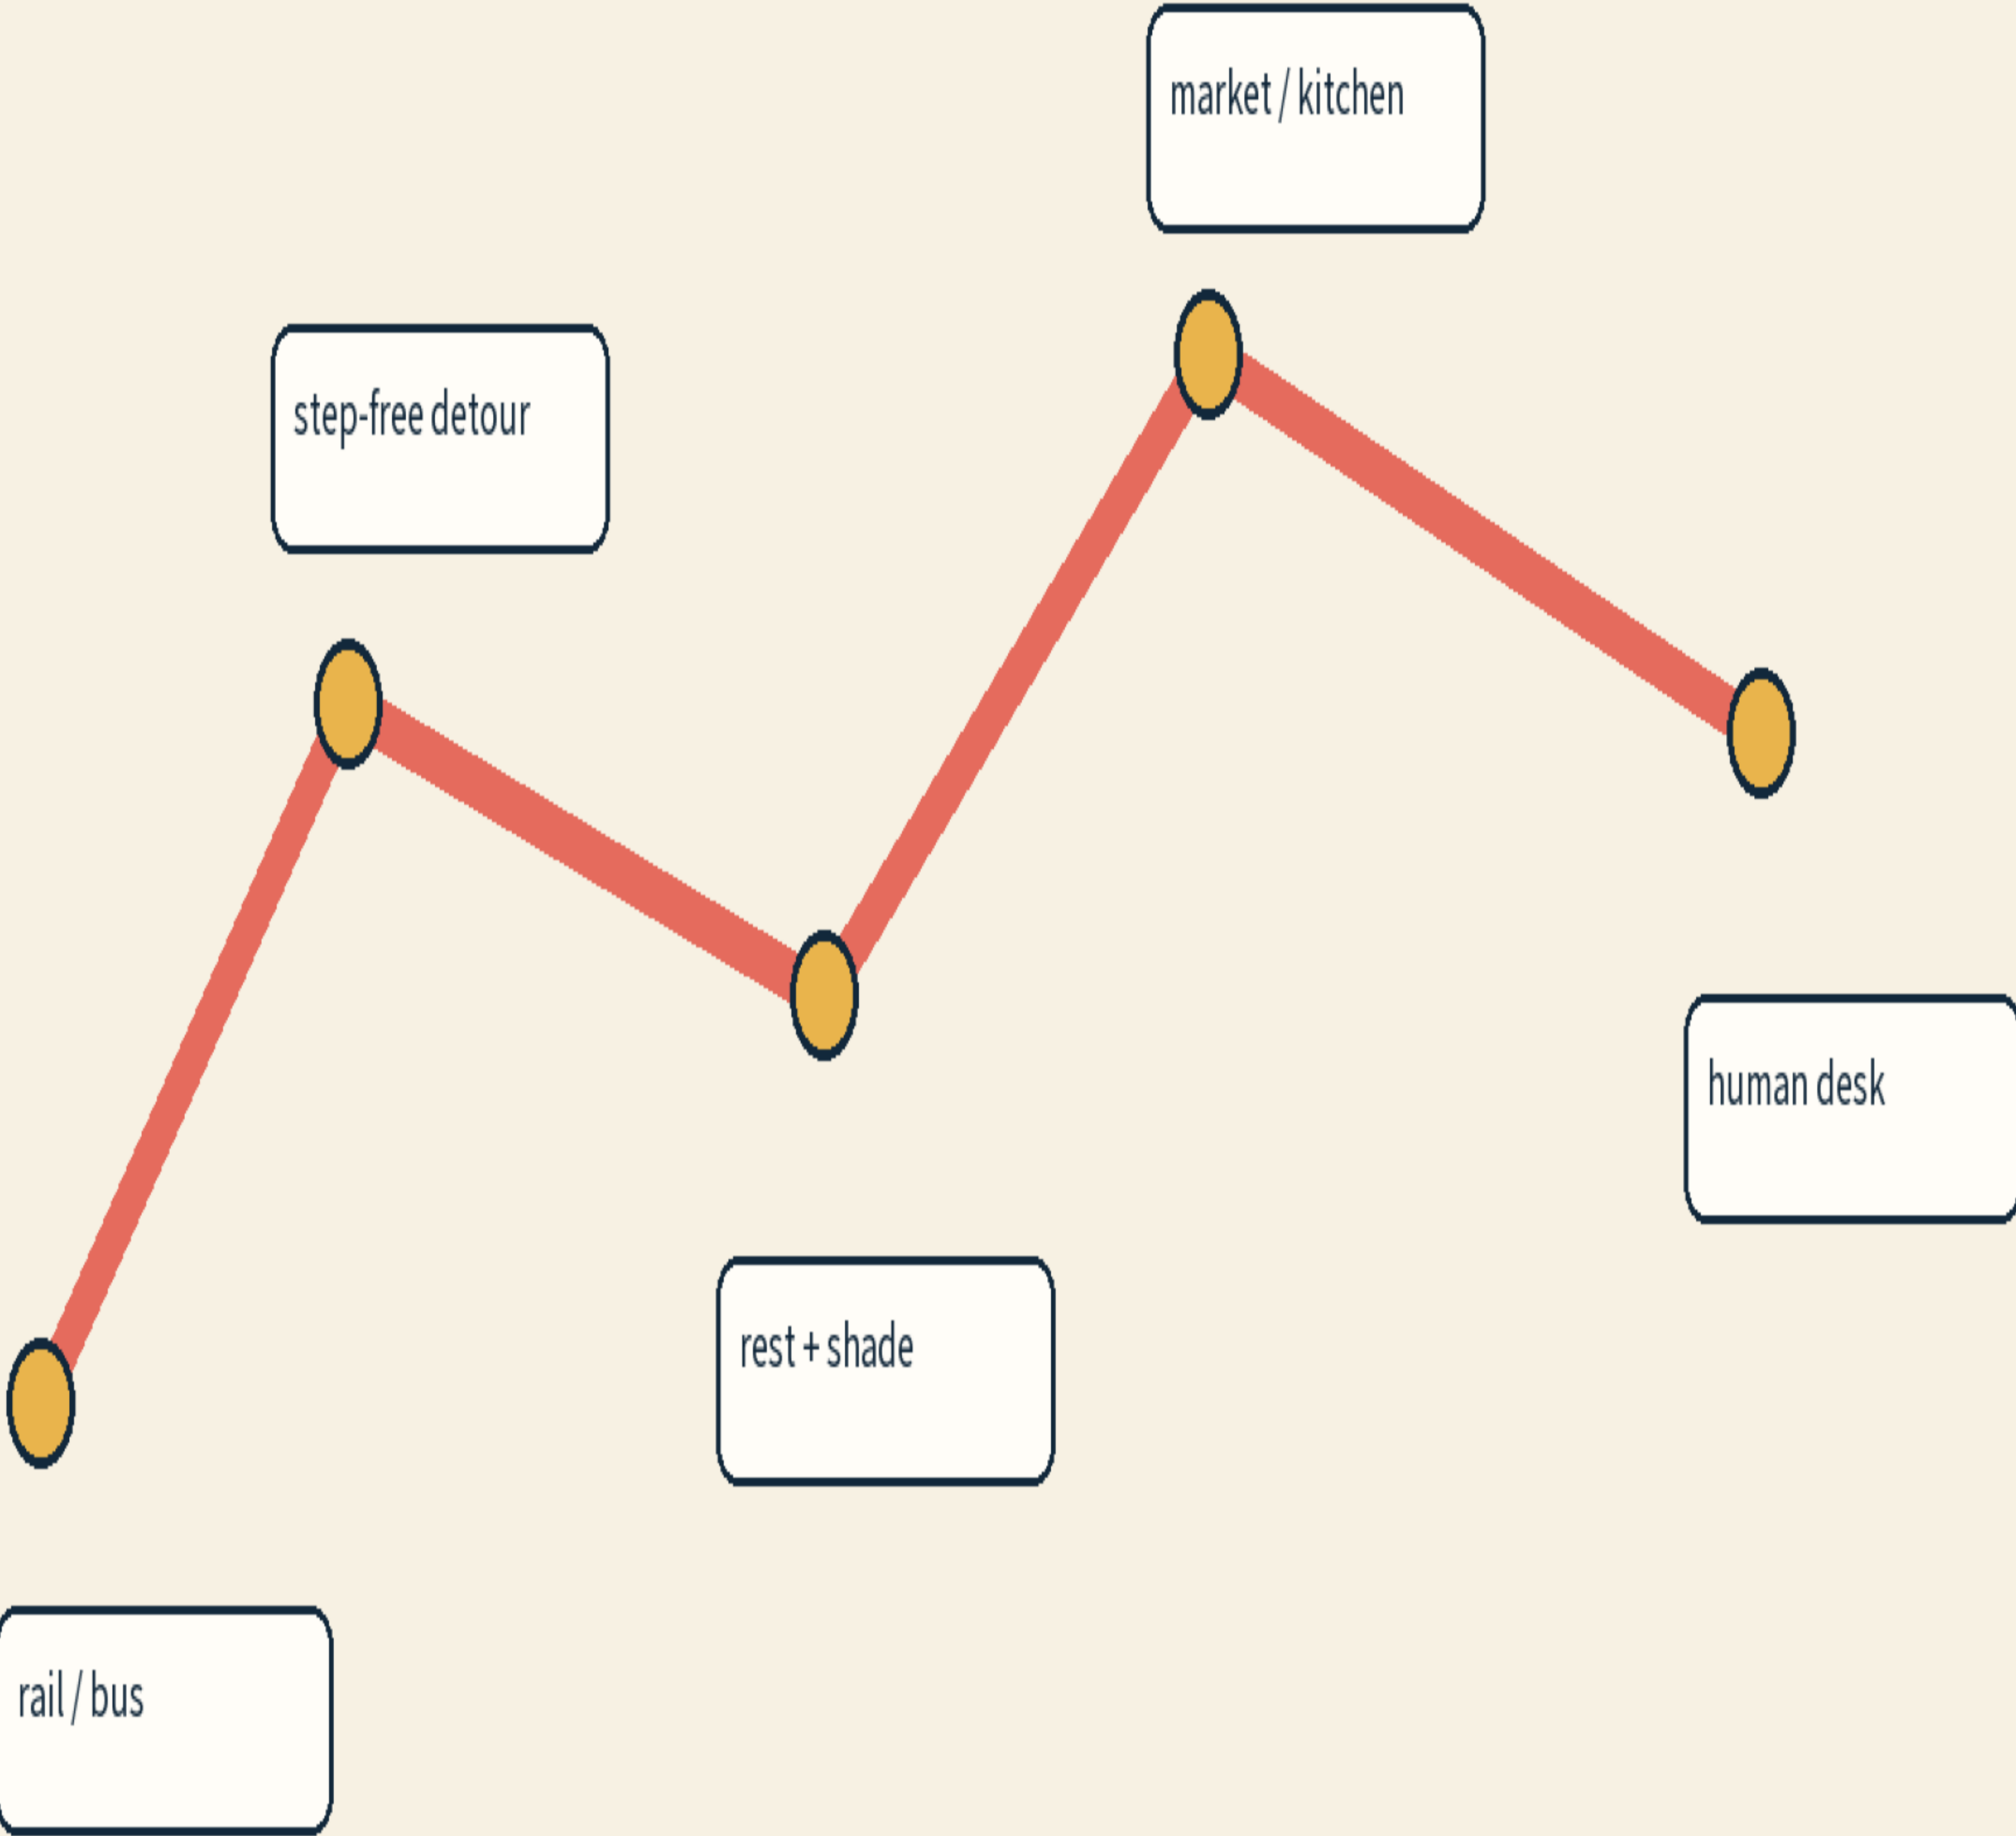

Learning loop / access and municipal interfaces

Walking first • transit legible • human assistance • offline fallback

FOODCHAIN JZ

CONCEPT / PROVISIONAL

Municipal checklist: power • water • drainage • ventilation • refrigeration • waste • fire • network

Candidate distances and nodes require survey and professional review.

Core metric evidence chain

Formal metrics / recalculation contract

Geometry, visual data-value and metrics.json share one provisional input set

FOODCHAIN JZ

CONCEPT / PROVISIONAL

site_area_sqm	11412825.386
green_ratio	0.110044
public_space_ratio	0.003167

official boundary / survey / land category → recalculate
