

Overall and key areas

One line, three nodes, three key areas

- Key areas use the taskbook names and repository provisional polygons.
- Three AI pilgrimage landmarks: Seasonal Ring Gate, One-Minute Echo Station and Shift-Scale Wall.

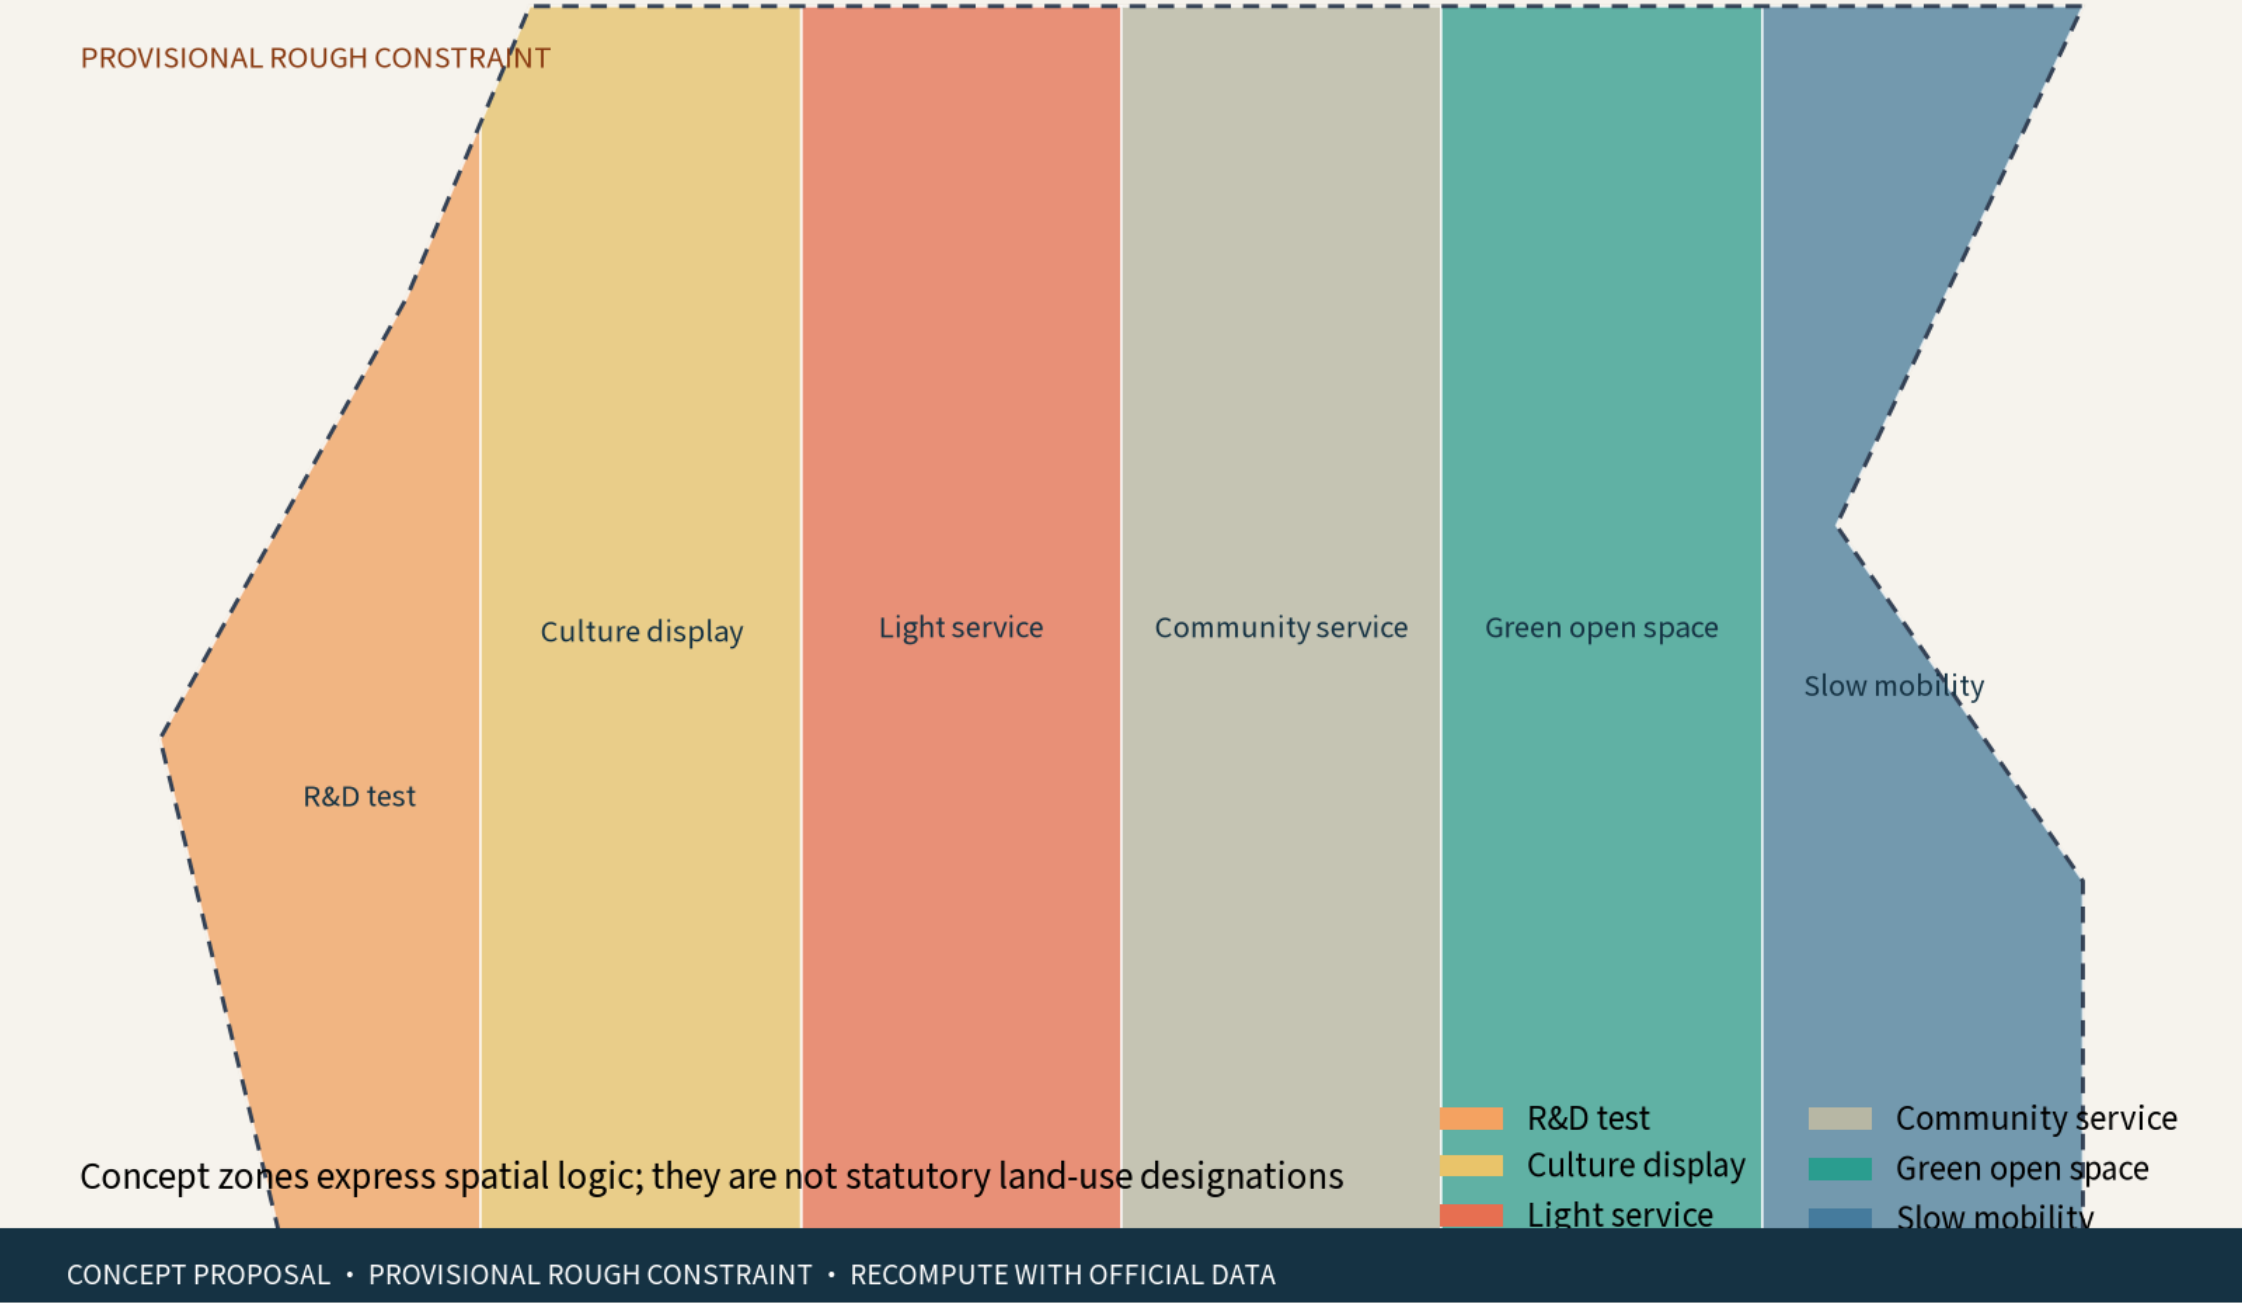

CONCEPT PROPOSAL • PROVISIONAL ROUGH CONSTRAINT • RECOMPUTE WITH OFFICIAL DATA

Land-use and blue-green public space

Concept zones, public rooms and slow links

- Six zones express spatial relationships, not statutory designations.
- Green and public-space ratios are recomputed from GeoJSON and must be recalculated with official geometry.

AI scenarios and seasonal operation

Four-Season Calibration Covenant: listen, review, rotate, disclose/withdraw

- Six domains: industry, space, transport, public services, culture and governance.
- Real services use only necessary fields; controller, proposed legal basis, access, retention/deletion, withdrawal and incident response remain to verify; anonymization/aggregation applies only to statistics; human review governs key decisions.

12 AI scenario cards / 4 industry test protocols

Phasing and metric evidence

Near 1-3 years / mid 3-5 years / long 5-10 years, all conceptual

- site_area_sqm, green_ratio and public_space_ratio are provisional design-model values.
- FAR, height, intensity, road redline, investment, footfall and capacity remain unknown/null.

Geometry-recomputable provisional design-model metrics

All three core metrics come from this package GeoJSON; recompute after official geometry is released

confidence: low / status: known / role: provisional design model
