

THE UNFINISHED CITY

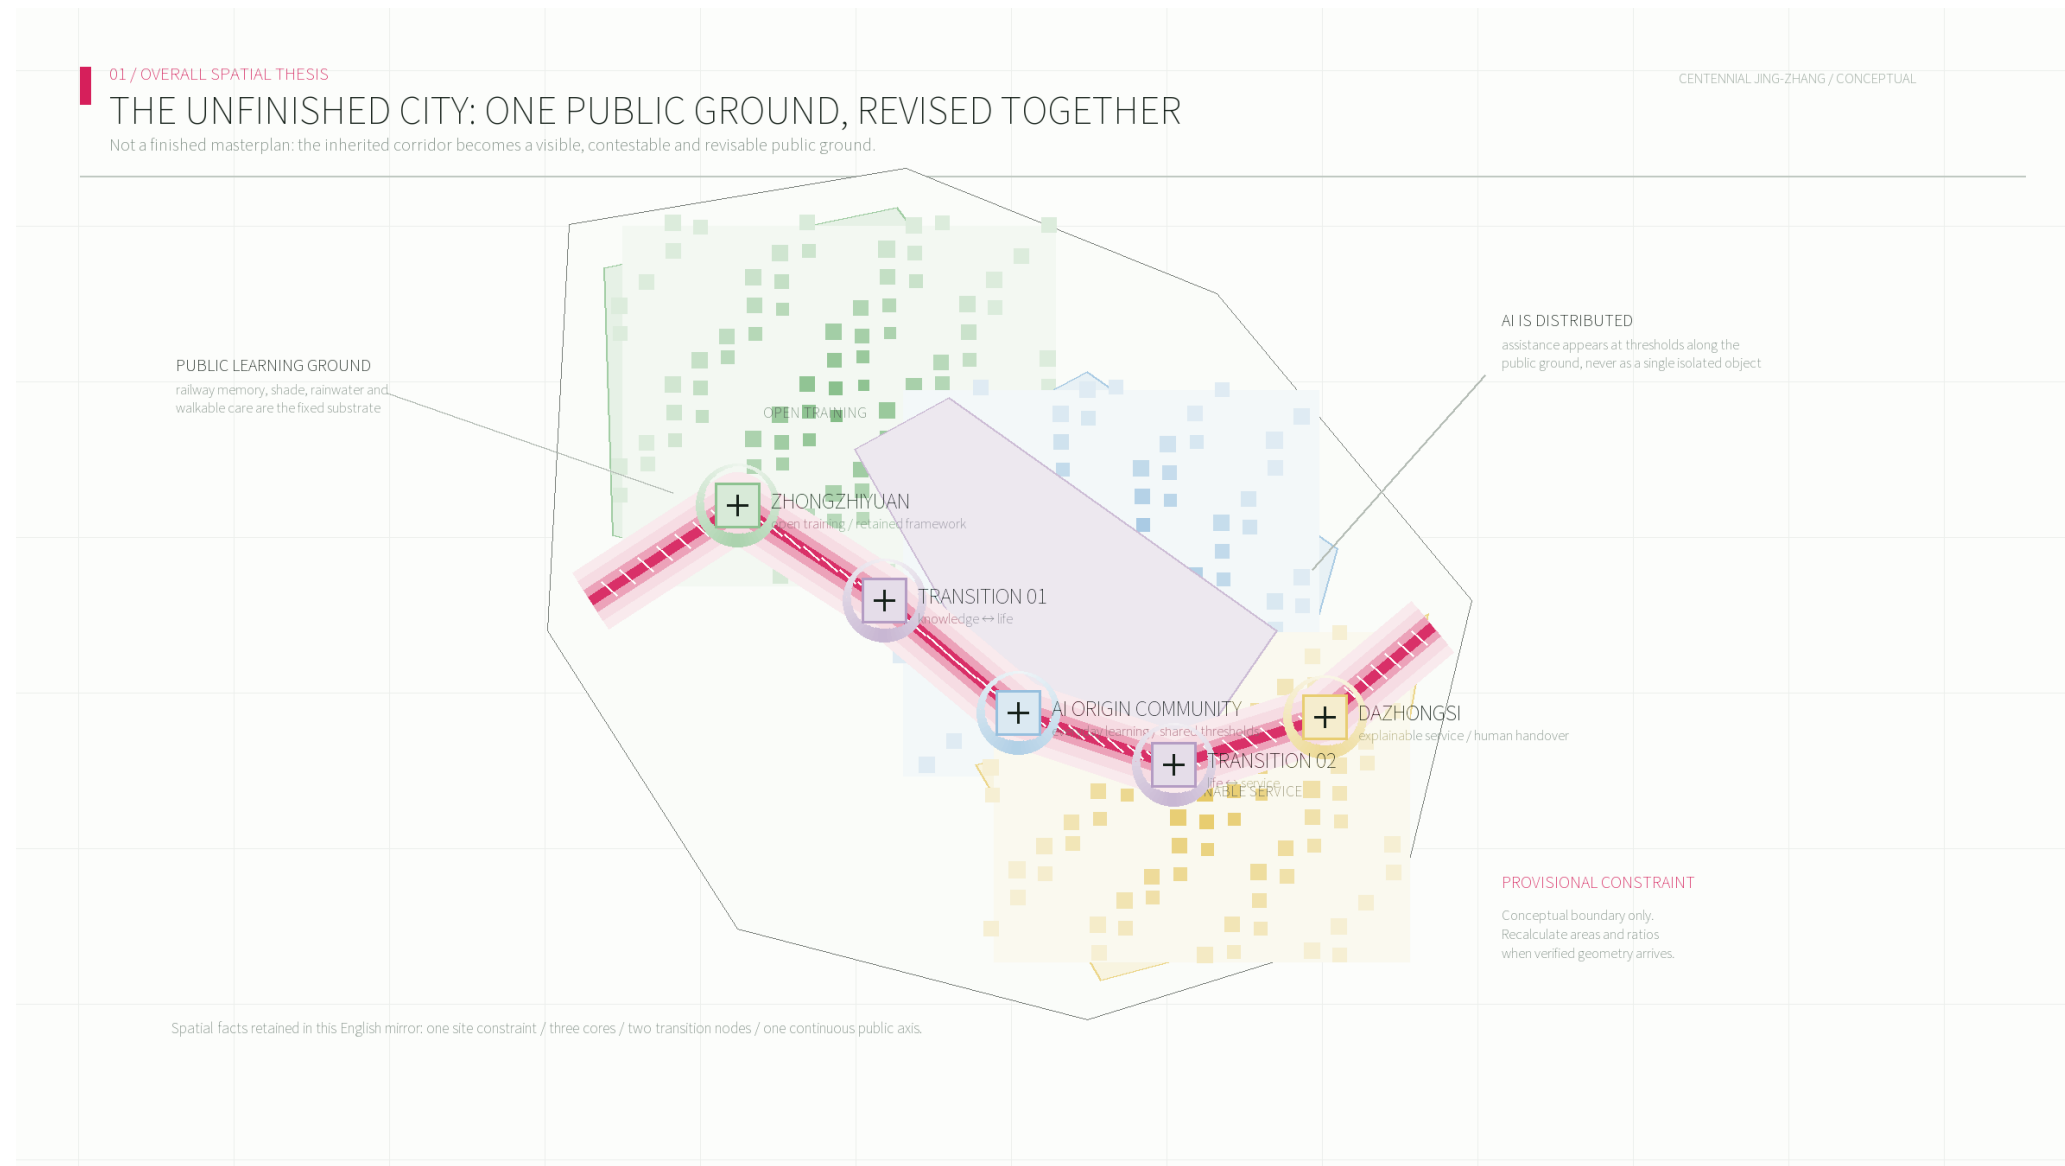

CENTENNIAL JING-ZHANG AI INNOVATION BELT / FORMAL CONCEPTUAL SUBMISSION

From urbanization to urban co-intelligence: this is not a one-time masterplan, but a conceptual renewal protocol that keeps inherited space visible, contestable and revisable.

Overall structure: one public learning ground

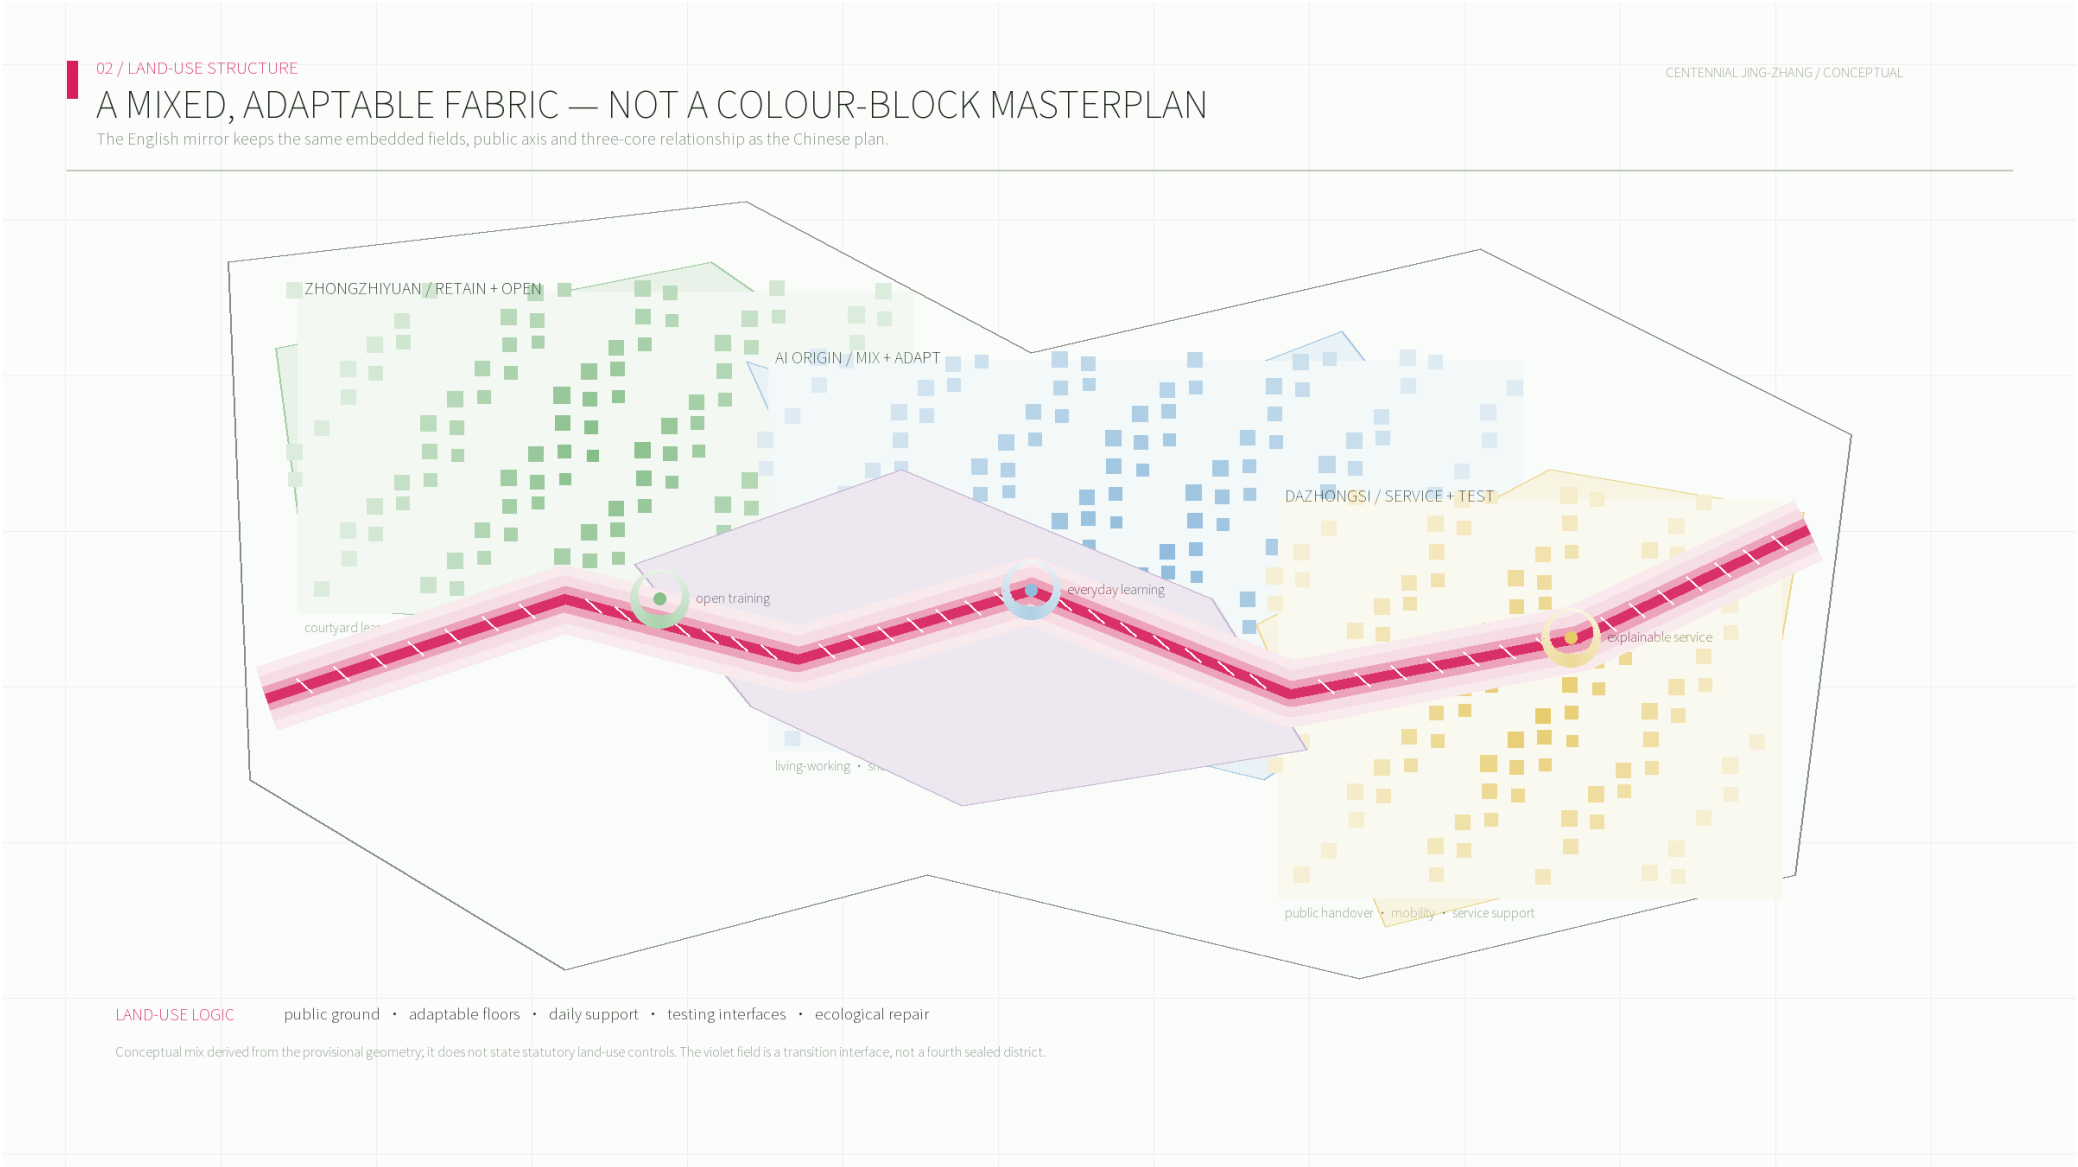

CENTENNIAL JING-ZHANG AI INNOVATION BELT / FORMAL CONCEPTUAL SUBMISSION

One continuous public learning ground links the three key areas: open training at Zhongzhiyuan, everyday learning at AI Origin Community, and explainable service at Dazhongsi. Two violet transition nodes make knowledge, life and service a reversible spatial process.

A mixed conceptual land-use fabric

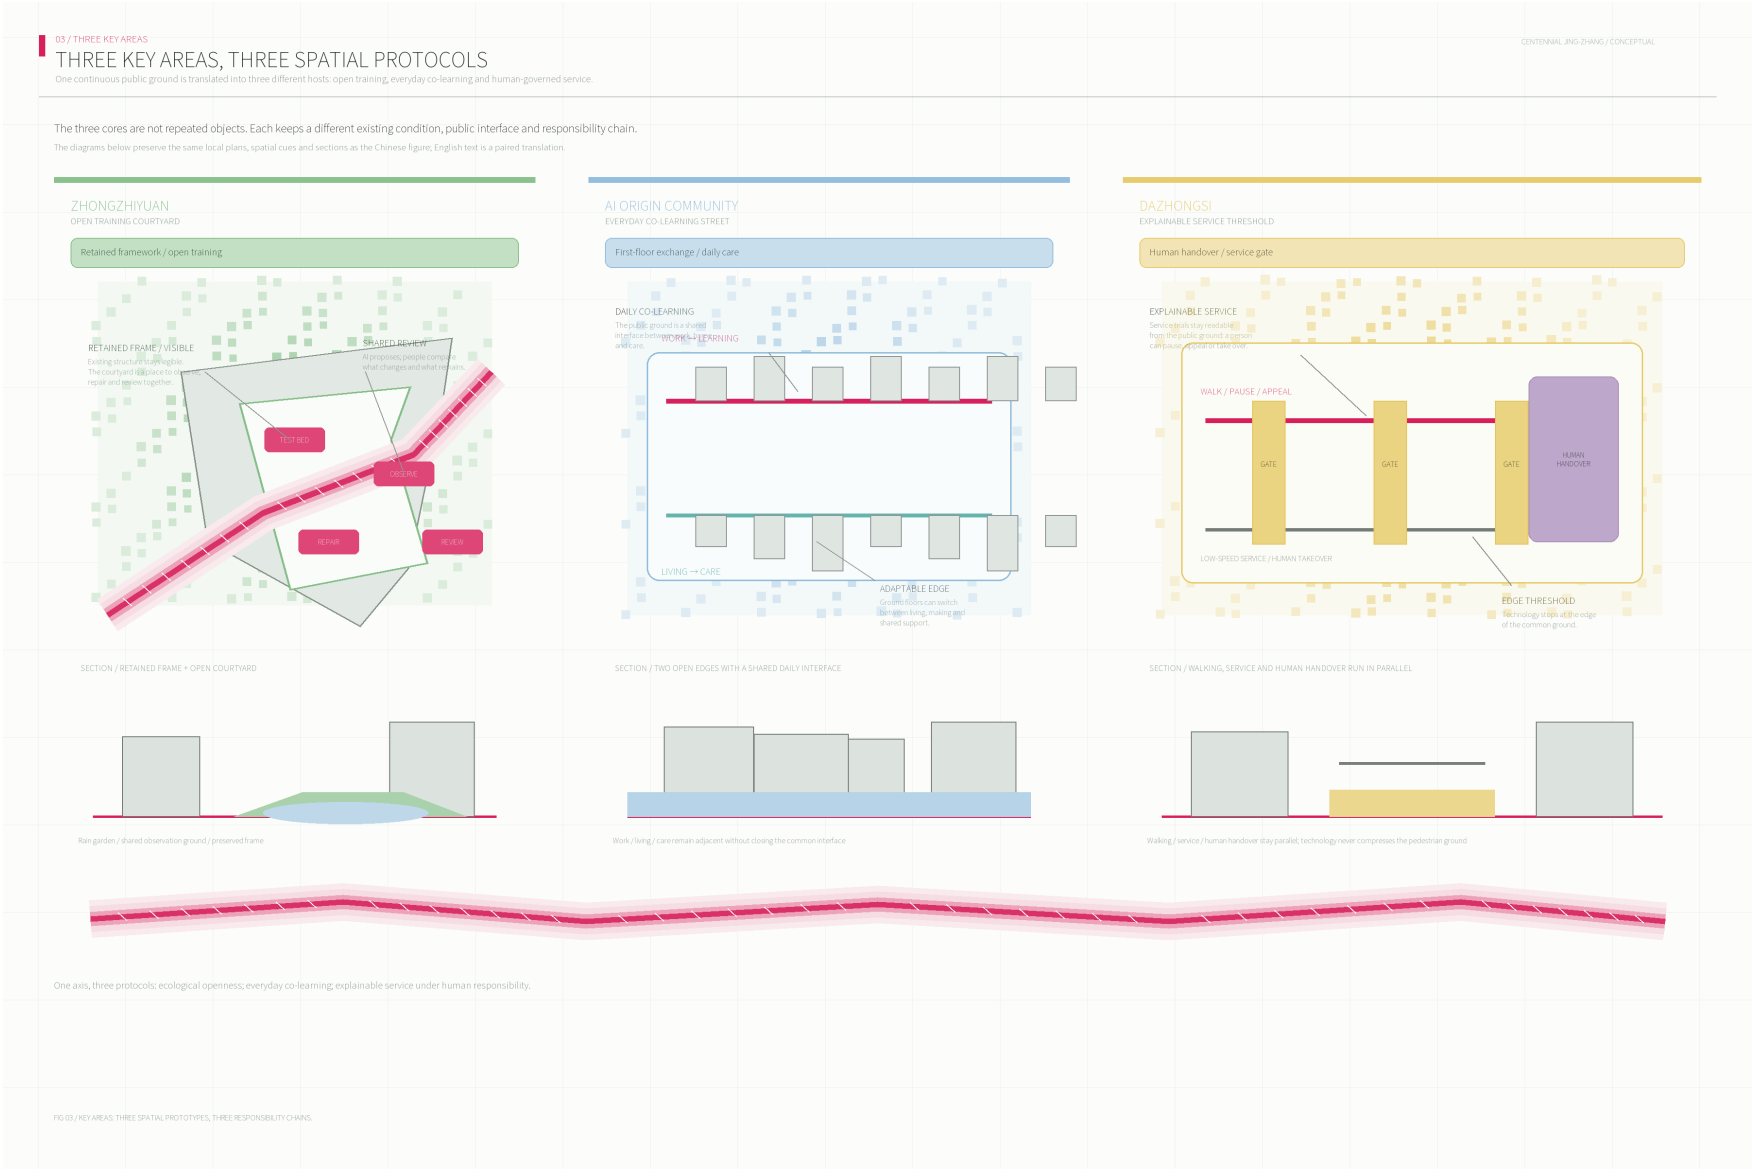

CENTENNIAL JING-ZHANG AI INNOVATION BELT / FORMAL CONCEPTUAL SUBMISSION

Land use is mixed, interwoven and adaptable. All ratios are internal calculations from the provisional constraint and do not state statutory land-use controls, intensity or approval outcomes.

Three key areas, three urban protocols

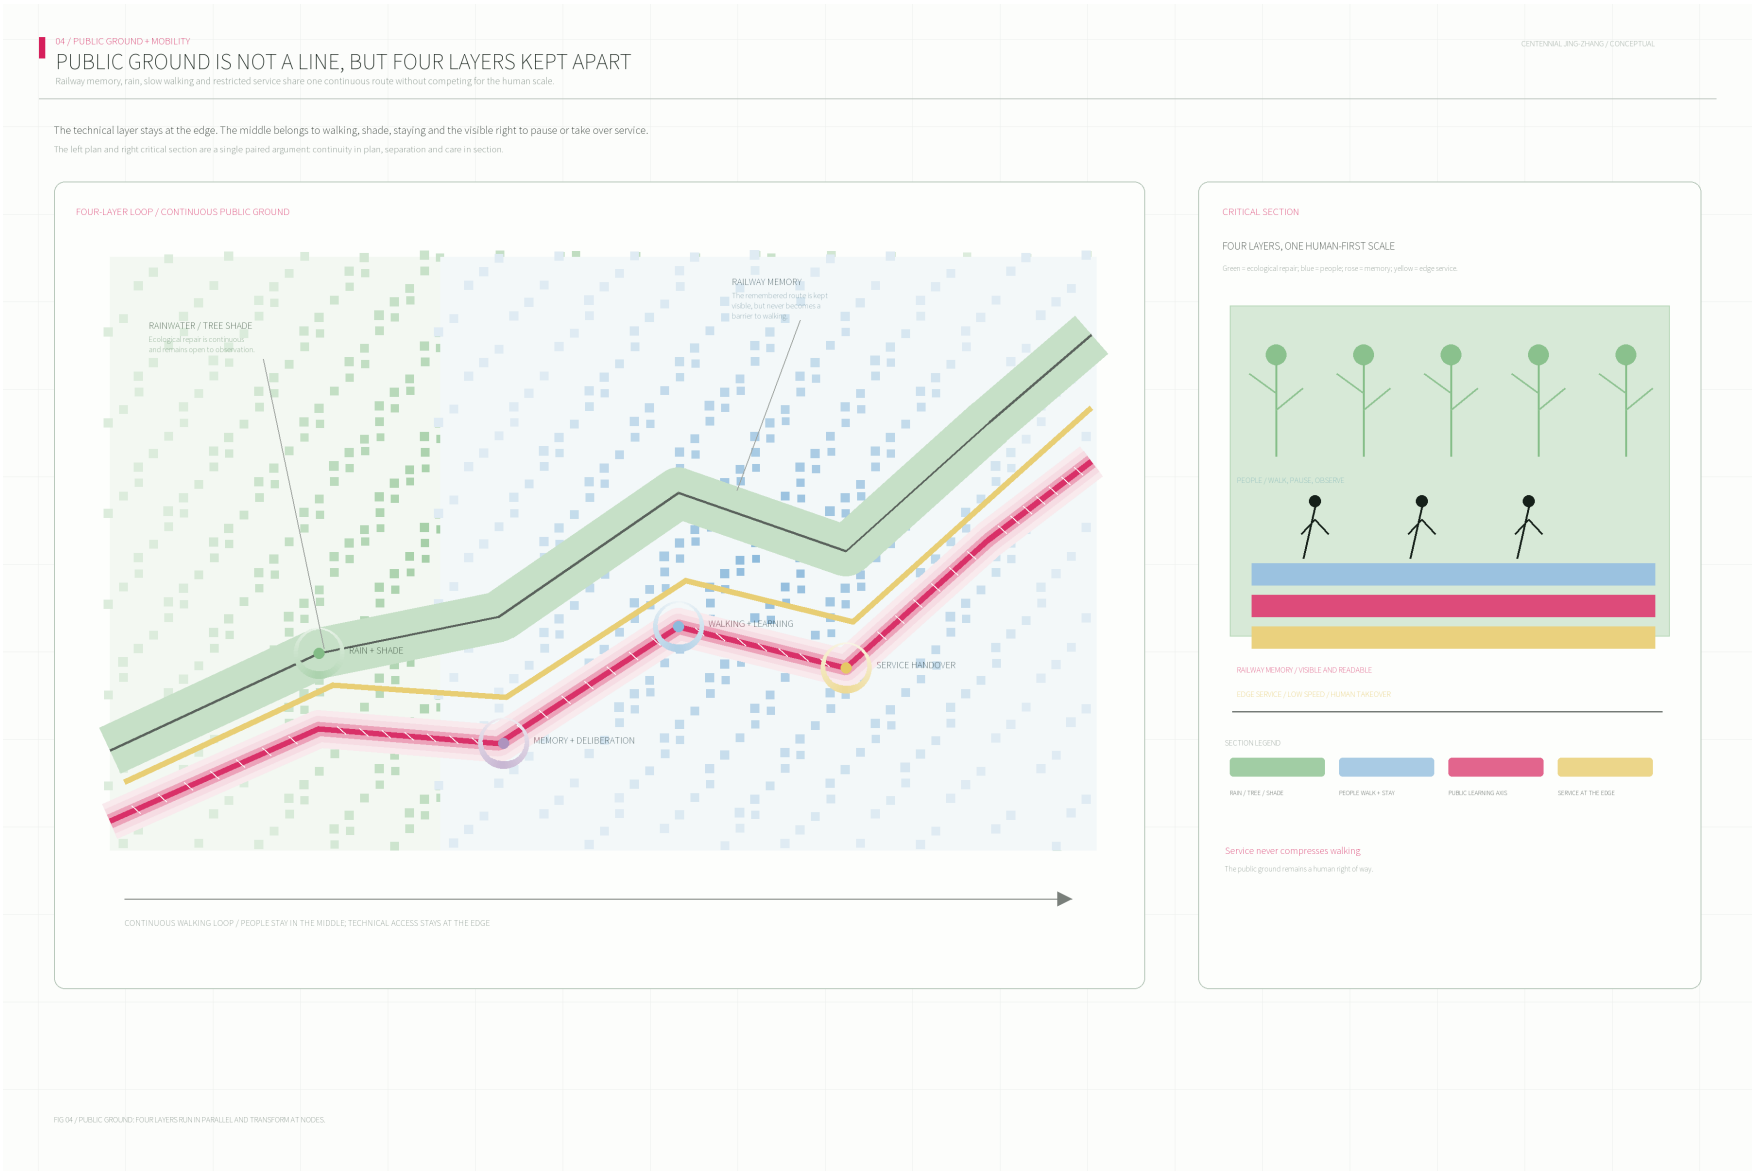

CENTENNIAL JING-ZHANG AI INNOVATION BELT / FORMAL CONCEPTUAL SUBMISSION

The three key areas are not generic AI hubs. They work as three different urban protocols: an open training court, an everyday learning street and an explainable service threshold.

Public ground and service corridor

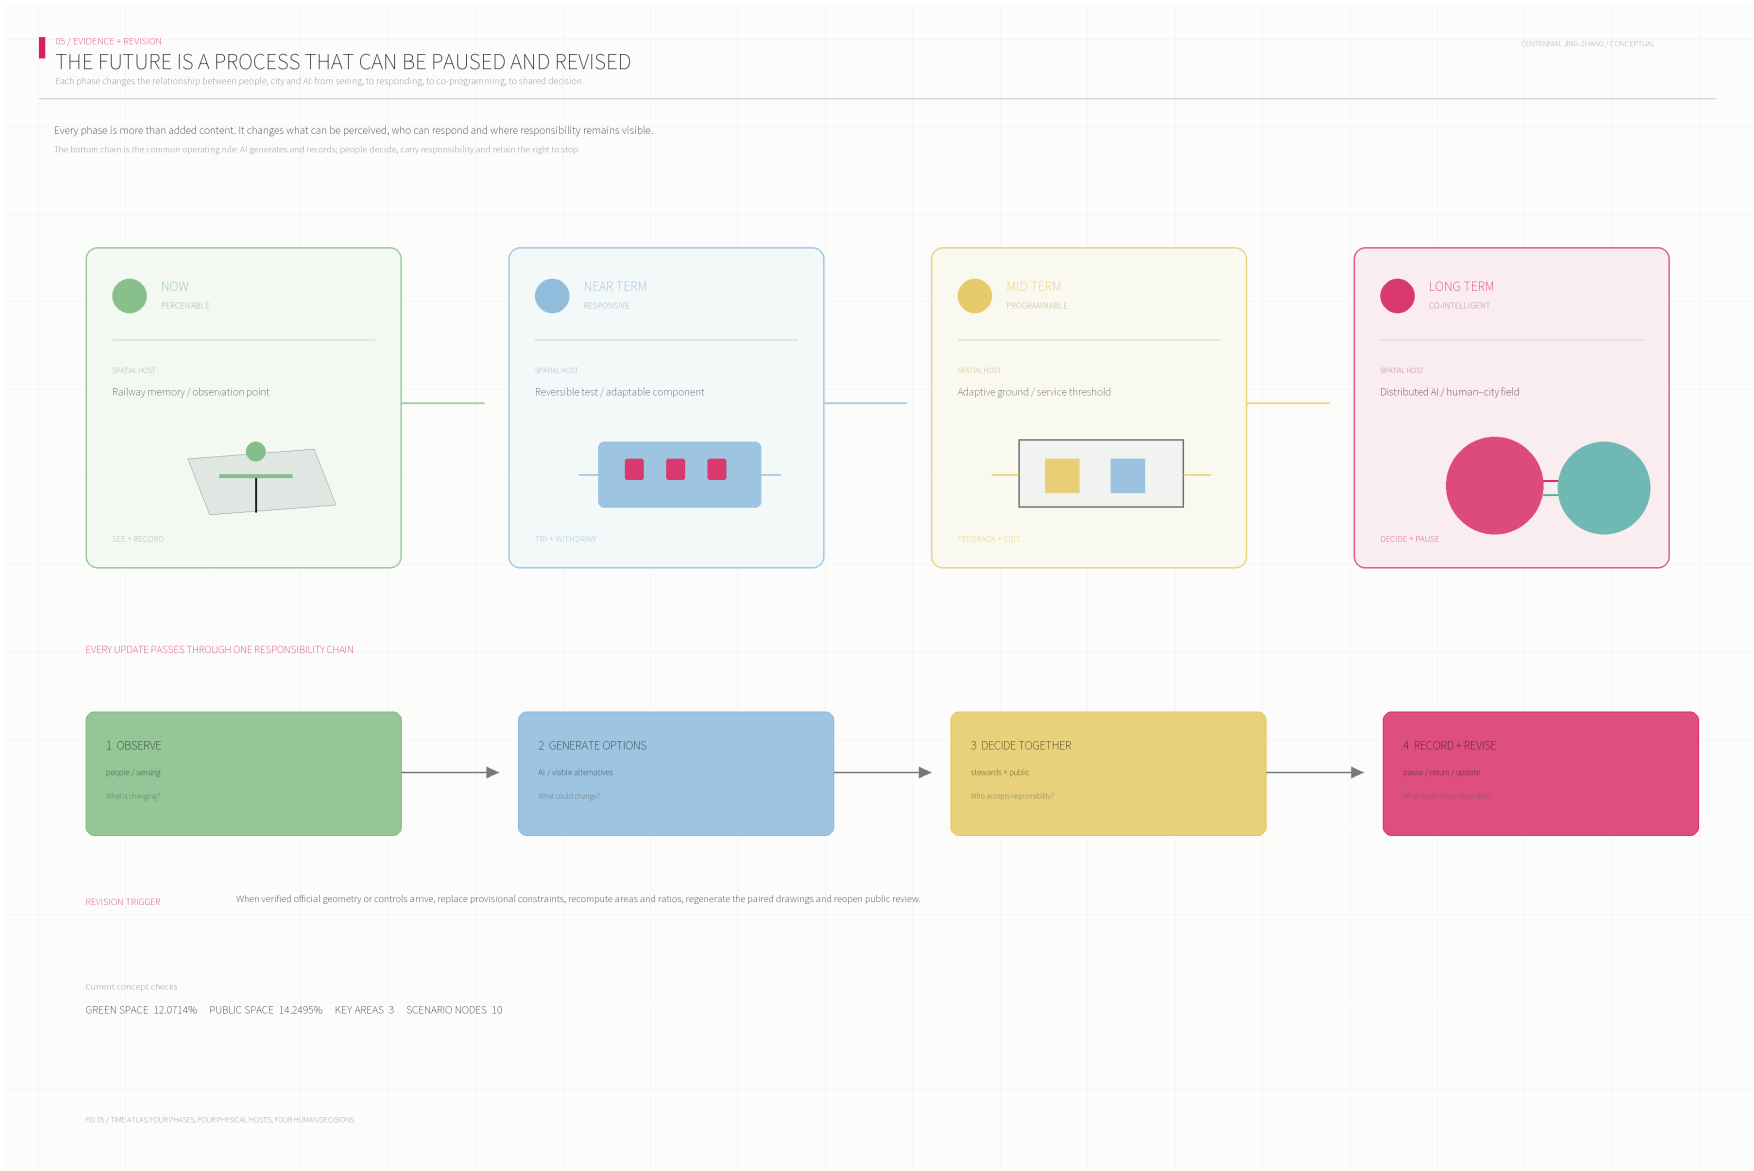

CENTENNIAL JING-ZHANG AI INNOVATION BELT / FORMAL CONCEPTUAL SUBMISSION

Railway memory, walking, rainwater, shade and the service edge form one public ground. Technical service cannot displace walking, staying or human takeover.

Scenarios, identity and long-term operation

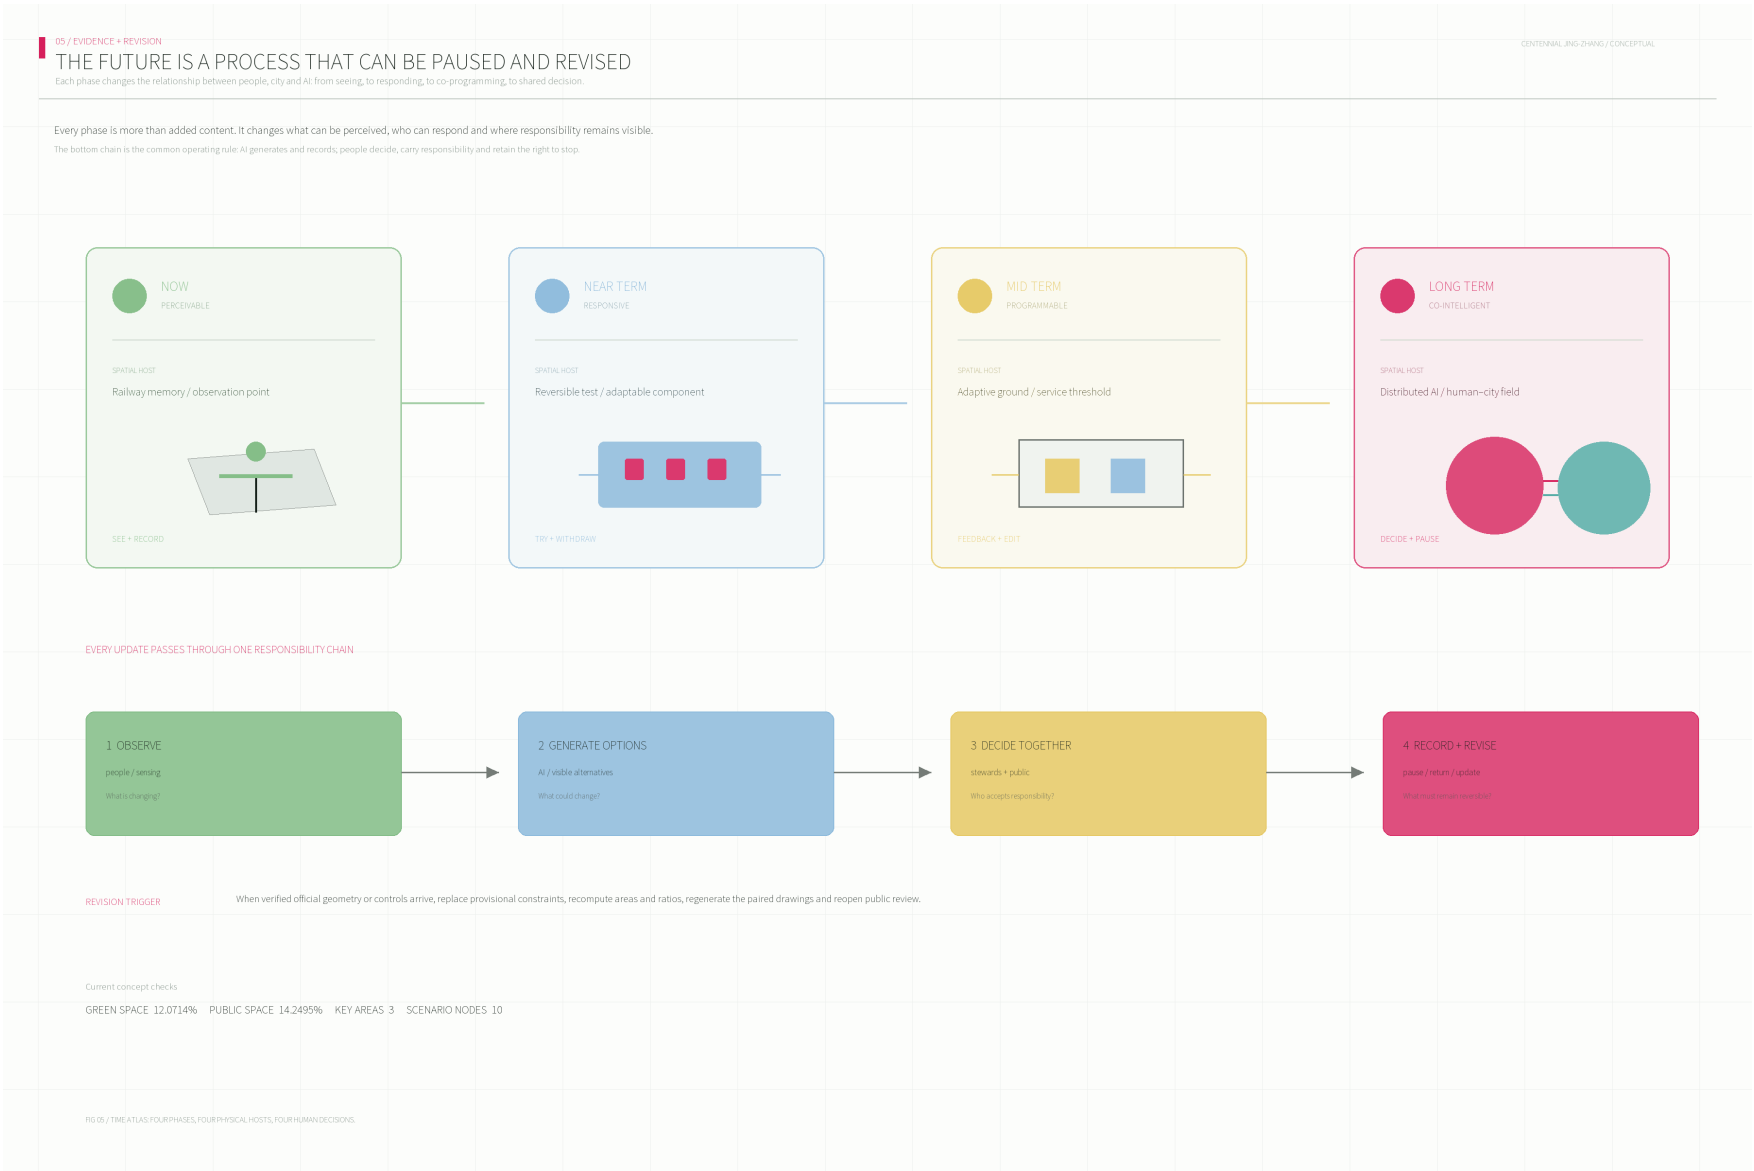

CENTENNIAL JING-ZHANG AI INNOVATION BELT / FORMAL CONCEPTUAL SUBMISSION

Unfinishedness is made operational through ten scenario cards, visible pause-and-appeal interfaces, annual open days and cross-city retrospectives. The identity system — The Unfinished City — combines a revisable rose public axis, three coloured fields and violet transition nodes.

Metrics, recalculation and risk boundaries

CENTENNIAL JING-ZHANG AI INNOVATION BELT / FORMAL CONCEPTUAL SUBMISSION

The 12.0714% green-space and 14.2495% public-space ratios are recalculated from the submitted provisional geometry. When verified geometry or controls are released, layers, metrics, drawings and the visual page must be regenerated.
