

CENTENNIAL JING-ZHANG × CIVIC AI

Centennial Jing-Zhang · Civic AI Loop

JING-ZHANG CIVIC AI LOOP

Grow AI intelligence from local issues, and let the city become intelligent through place.

Along the century-old Jing-Zhang corridor, continuous public space links problem framing, idea generation, R&D review, bounded validation, value transformation, and public return—forming an urban co-intelligence loop for youth, enterprises, communities, and public services.

02 Overall Concept & Spatial Structure

One Spine · Three Cores · Two Wings · Dual Gates · Dual Fields · One Network · Three Flows

Starting from current urban issues and local resources, this page establishes the three-layer scope, spatial structure, and urban-renewal framework of the Centennial Jing-Zhang Civic AI Loop.

03 Urban Space & Renewal Strategies

01 Urban innovation occurs through the transfer of spatial carriers

- Repurpose underutilized spaces such as rail corridors, streets, and public facilities
- Transform idle space into innovation carriers and development displays
- Build conditions for structural innovation through scenario-driven design

02 Openness and control coexist

- Open public space, but manage sensitive and strategic zones
- Open interfaces, but enforce rules and conditions
- Embrace diversity, but maintain appropriate order and quality

03 Public space is the foundation of innovation

- Activate public spaces and create diverse settings for use and retention
- Encourage spontaneous activity and ensure pedestrian delight
- Use digital technology to support refined operations and enable AI

04 Urban renewal begins with real-world use

- Ensure spaces are shaped by real needs and used in real life
- Use iterative, low-cost interventions to enable gradual improvement
- Guide projects with market feedback and adaptive adjustments

05 Railways, slow mobility, and blue-green spaces together repair the public interface

- Link railway nodes, urban streets, and small waterways
- Separate and integrate slow mobility systems
- Connect communities and public spaces along the corridor

These five principles form the the overall spatial foundation and the four renewal actions shelow.
They provide the conceptual basis for design and implemenation, ensuring continuity from overall strategy to local interventions and outcomes.

Jing-Zhang Civic AI Loop | Slow Mobility, Blue-Green, and Heritage Spatial Framework

Length: 4.8 km | Width: 114 m | Multi-modal integration: slow mobility + blue-green + heritage

Four Renewal Actions | Existing Terrain & Renewal Location Map

LOCATION INDEX

Renewal Action Index

Key sites and recommended actions

- 01 Ecological & Blue-Green Restoration
Restore rivers & green corridors
Improve habitats & water quality
Build ecological resilience
- 02 Mobility & Public Interface Enhancement
Complete slow mobility network
Enhance street interfaces
Strengthen station connections
- 03 Cultural & Heritage Activation
Activate rail heritage
Reuse historic buildings
Enhance cultural experiences
- 04 Community Vitality & Place-Making
Improve public spaces & services
Support recovery to culture
Foster community participation

Centennial Jing-Zhang · Civic AI Loop | Project Overview

From local issues, we extend AI intelligence to empower the city and connect neighborhoods.

AI Origin Community | Co-Intelligence Origin

A hub for AI literacy and co-innovation. From concept incubation to real-world application, we co-create the future.

Zhongzhi Park | Verification Lighthouse

From AI prototypes to real-world validation. We test concepts, verify outcomes, and turn ideas into trusted value.

Dazhongsi | Public Return Plaza

Rooted in millennia of history, open to everyone. A place for public gatherings, shared events, and collective well-being.

05 Composite of Twelve Scenarios

From public entry to public return, AI completes a full growth cycle in the real city. The twelve scenarios are not isolated activities, but together form a continuous process of entry, R&D, validation, and transformation. Six user groups repeatedly overlap across the system: living communities, moving communities, creative communities, cultural communities, industry communities, and operations communities. Youth are not treated as a separate isolated group, but as a core creative force running through all six communities.

01 Jing-Zhang Co-created Interpretation Cultural Community  Phase: Entry & Mobilization SCN-001 Community: Cultural Community Description: Youth co-create interpretations of place and stories.	02 City Problem Clinic Industry Community  Phase: Problem Discovery SCN-002 Community: Industry Community Description: Youth identify real urban challenges and needs.	03 Youth Collaboration Commons Creative Community  Phase: Co-creation & Collaboration SCN-003 Community: Creative Community Description: Youth collaborate across disciplines to ideate solutions.	04 Accessible Slow Mobility + Transfer Assistant Moving Community  Phase: Solution Testing SCN-004 Community: Moving Community Description: Prototypes tested in real mobility environments.
05 Low-speed Robot Shared-path Test Moving Community  Phase: Solution Testing SCN-005 Community: Moving Community Description: Robots tested on shared paths with people.	06 Event-day Slow Mobility + Shuttle Coordination Moving Community  Phase: Operational Validation SCN-005 Community: Moving Community Description: Coordinated slow mobility and shuttle operations.	07 Park Ecology Maintenance Assistant Living Community  Phase: Operational Validation SCN-007 Community: Living Community Description: AI tools assist ecological monitoring and care.	08 Youth Night Learning + Public Events Cultural Community  Phase: Engagement & Education SCN-008 Community: Cultural Community Description: Public events and learning nights engage the community.
09 Open Test Week Moving Community  Phase: Open Testing SCN-009 Community: Moving Community Description: Open week for public testing and feedback.	10 Public AI Sustainability Review Industry Community  Phase: Evaluation & Review SCN-010 Community: Industry Community Description: Public review of AI impact and sustainability.	11 AI-native Business with Public Return Industry Community  Phase: Business Incubation SCN-011 Community: Industry Community Description: AI-native ventures develop and pilot solutions.	12 Public Return + Transfer Gateway Operations Community  Phase: Transformation & Handover SCN-012 Community: Operations Community Description: Solutions transferred and returned to the public.

06 AI Return Flow, Four Gates & Metrics Estimation

From node operations to public return, this page organizes space, governance, investment, and renewal into a transferable pathway.

01

Four Gates & the Public Return Mechanism

From experimentation to replication, this urban AI governance loop includes four gates:

01 Problem Entry Gate · 02 Bounded Testing Gate
03 Scale-Tracking Gate · 04 Return & Renewal Gate.

Three-Tier & A Two-Gate Structure | Not Three Levels, but Three Public Commitments
The "question → solution → return" loop links experimentation to public value.

STRUCTURE DIAGRAM 01

Value Propositions → Confirm direction with small-scale pilots → Validate outcomes within boundaries → Scale value → Return to public

Cross-Cutting Enablers → Inclusive Governance · Technology Neutrality · Public Benefit First · Open Collaboration · Transparent Accountability

CONCEPTUAL PROTOTYPE · NON-OFFICIAL · FOR INTERNAL USE ONLY

02

Phased Implementation Path

Use a rolling path instead of full rollout at once. Light launch activates 25% of scenarios (CNY 283 million); standard implementation activates 50% (CNY 1.114 billion); full implementation activates 100% (CNY 2.603 billion). Prioritize visible, usable and operable nodes, then expand only when operating data supports it. Indicative values; professional review required.

Dual-Gate Governance Transformation | From Segmentation, Connection, to Adaptive Adjustment
From alignment to activation, from pilots to replication.

GOVERNANCE DIAGRAM 02 (GATE FLOW EXAMPLE)

This diagram illustrates a conceptual framework. Figures and structure are for internal planning reference only.

CONCEPTUAL PROTOTYPE · NON-OFFICIAL · FOR INTERNAL USE ONLY

03

Spatial Structure Metrics

Continuously review whether the structure of one spine, two gates, two fields, one network, and three flows is functioning properly—from node operations to public return. Maintain active flow across spaces, ensure people, data, and resources are integrated into the system, and drive ongoing improvement in value.
