

Overview map

One bus connects three stations and five segments

Rendered from package GeoJSON; not a statutory redline, survey or navigation map

Scope + evidence state

43.6 km²
study scope | official announcement

11.4 km²
design scope | official announcement

368.4 ha
three key areas | official announcement

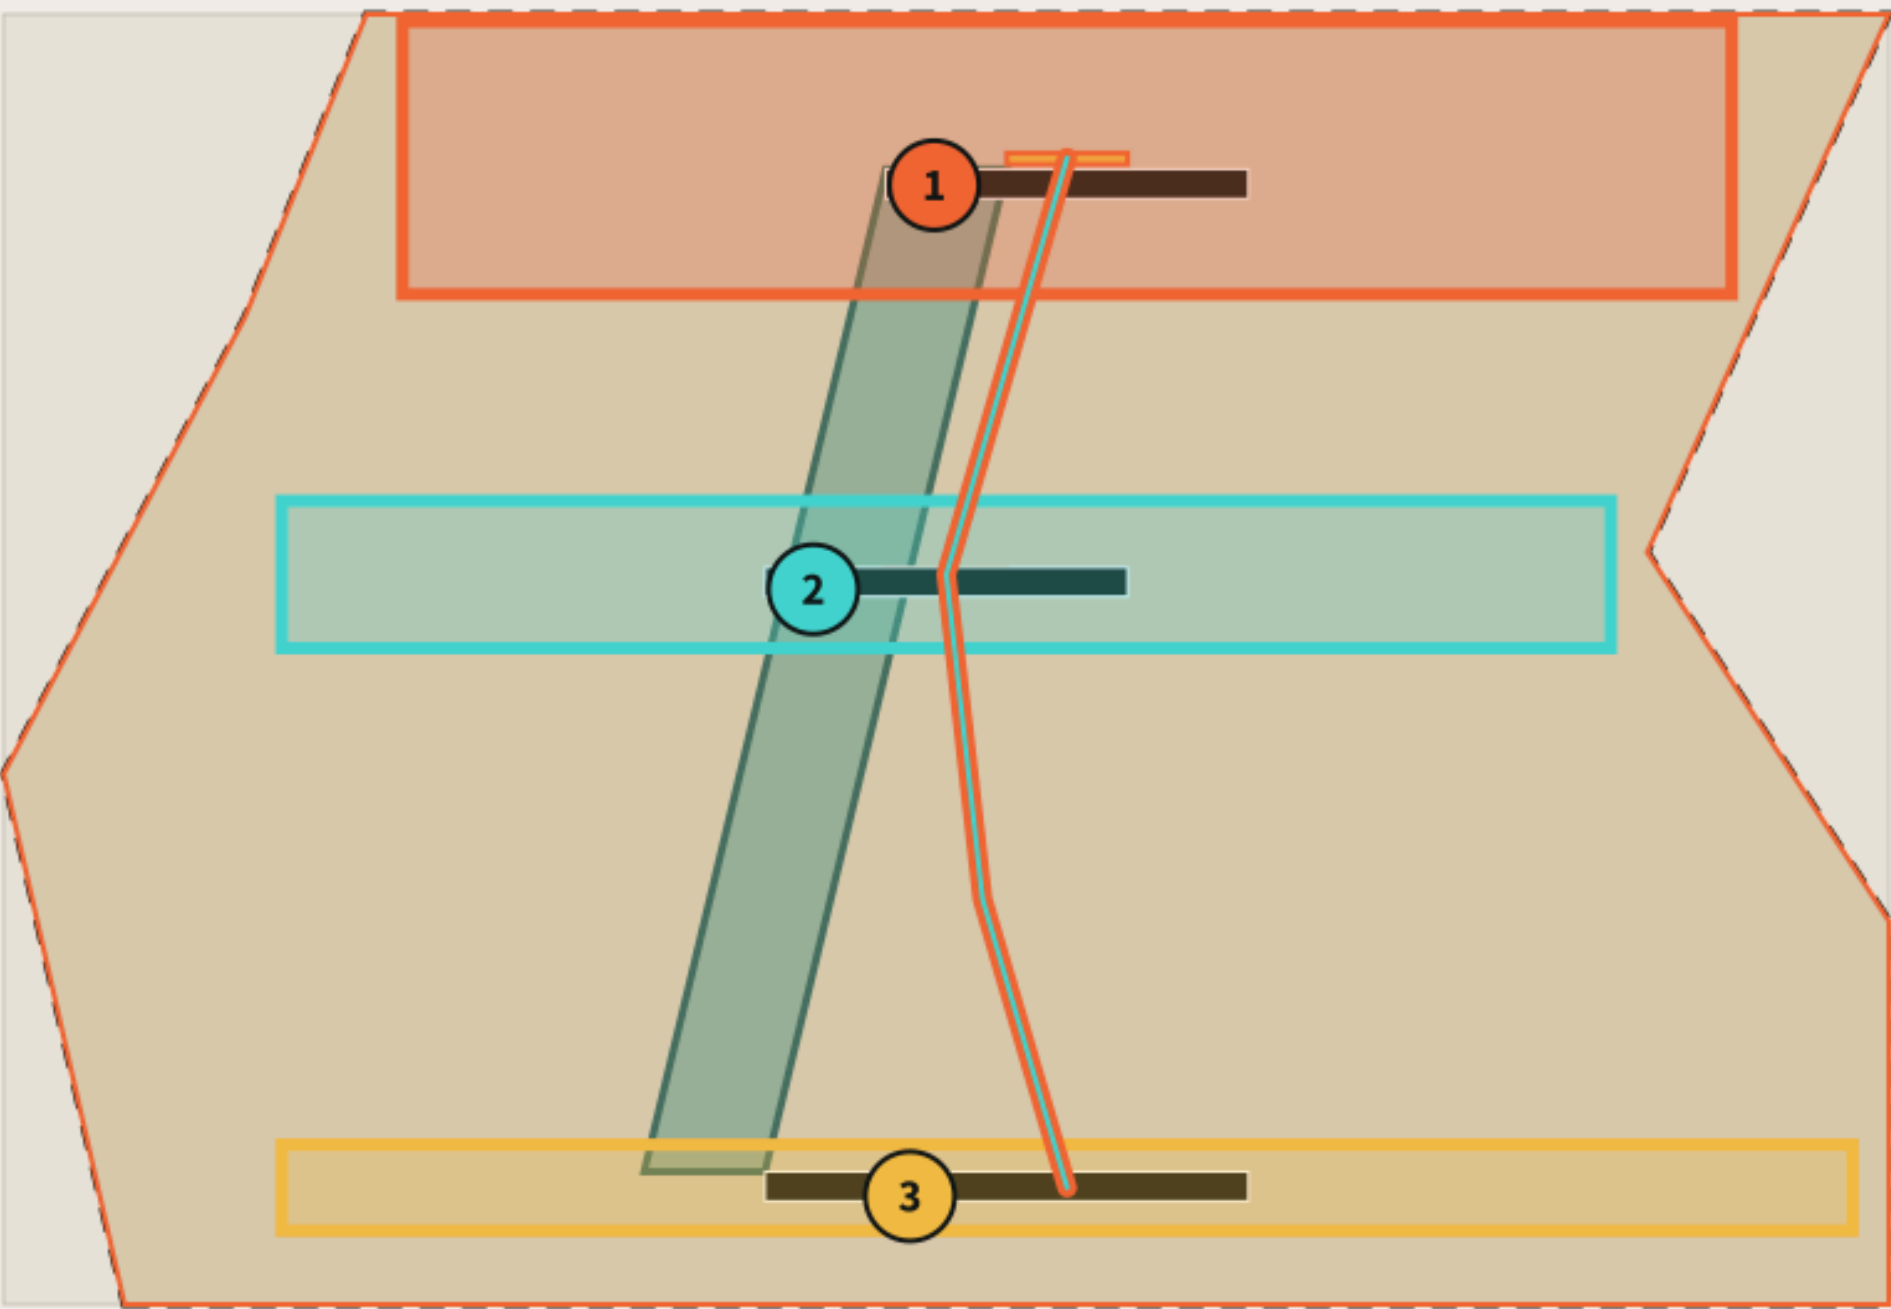

- Zhongzhiyuan | verify
- AI Origin | commons
- Dazhongsi | translate

Provisional rough geometry. Recalculate after formal polygons.

Spatial base

Concepts evolve; geometry does not drift

Technical foundation and conceptual expression are managed separately

FROZEN
9 GeoJSON layers
no redraw or coordinate change

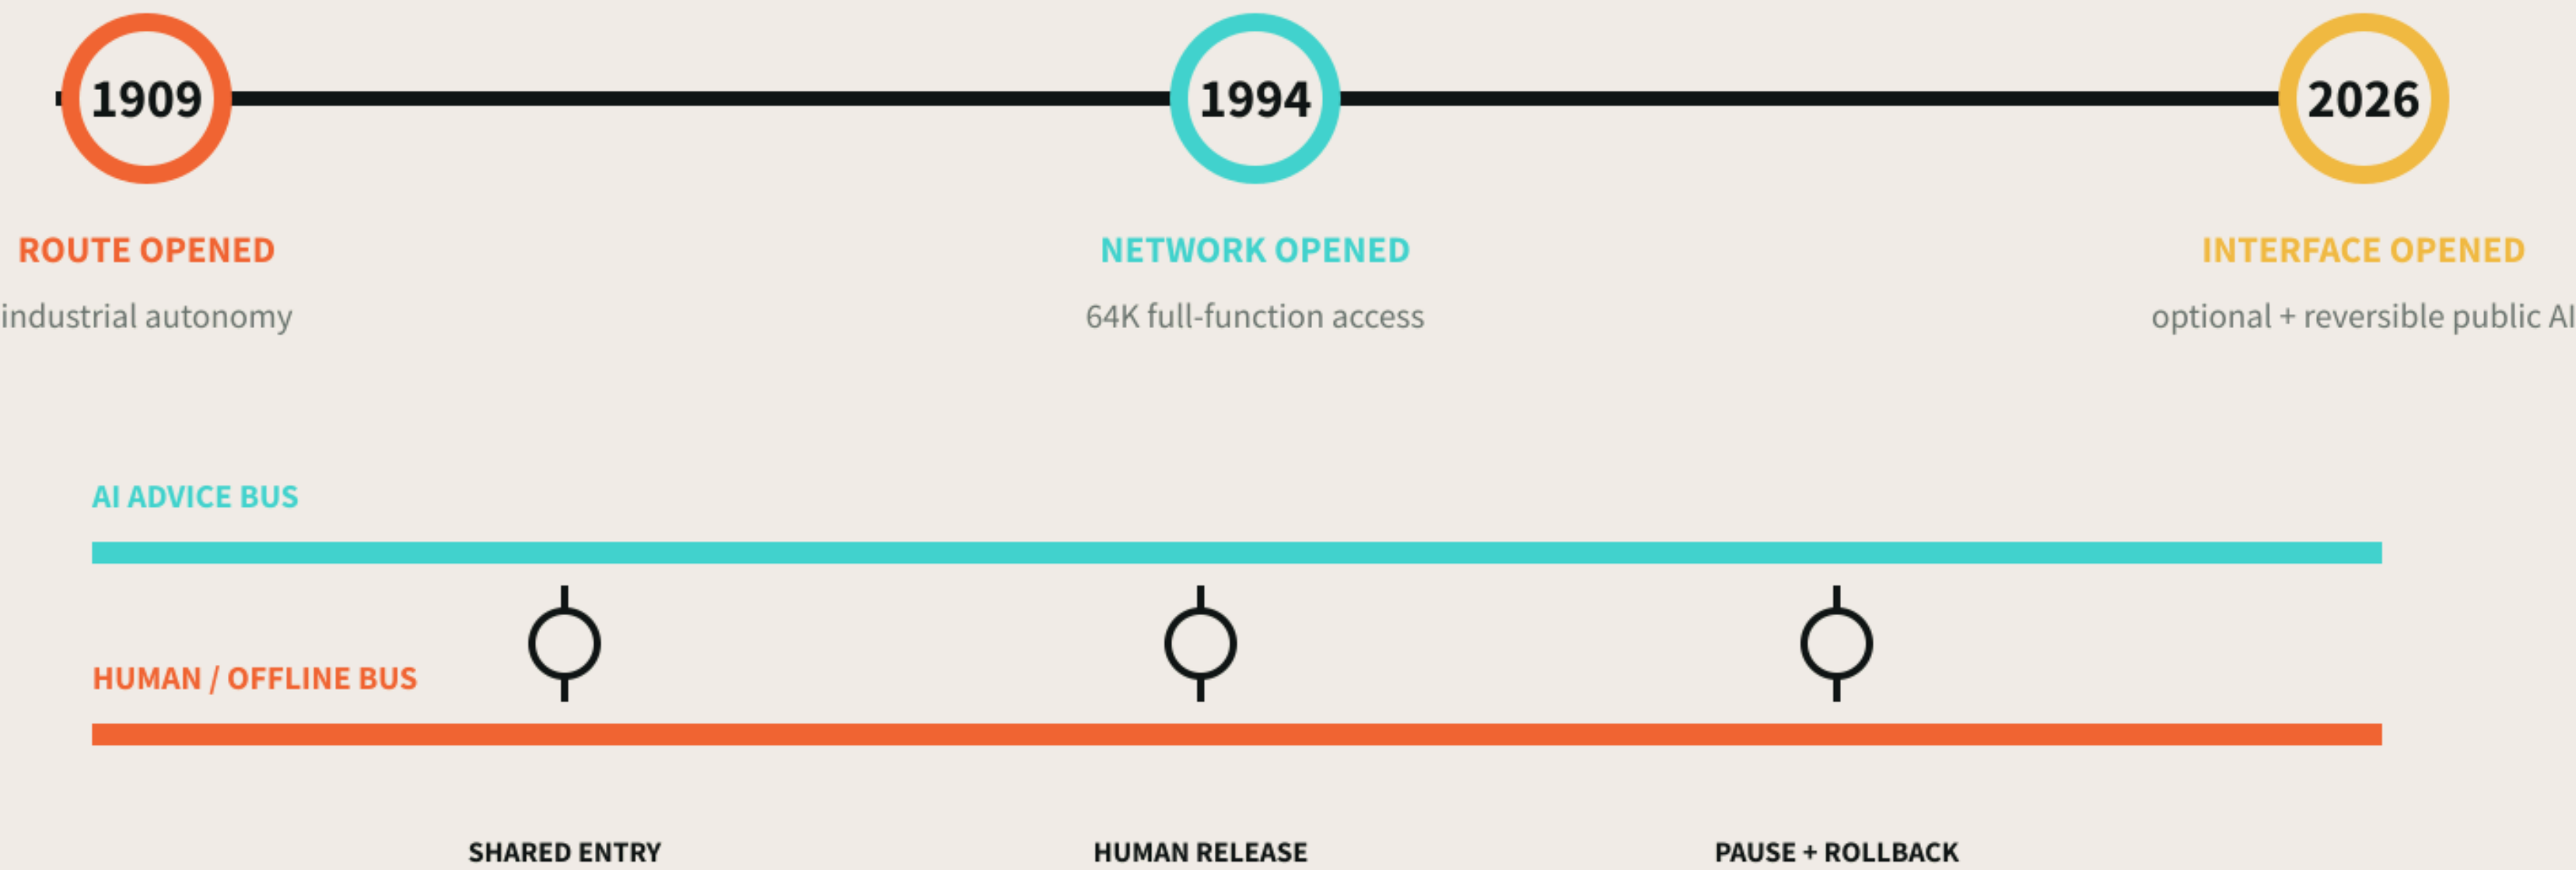

ITERABLE
64K narrative + public interface
no statutory inference

UNKNOWN
FAR / height / ownership / utilities
await formal evidence

Dual-origin bus

1909 route • 1994 network • 2026 public interface

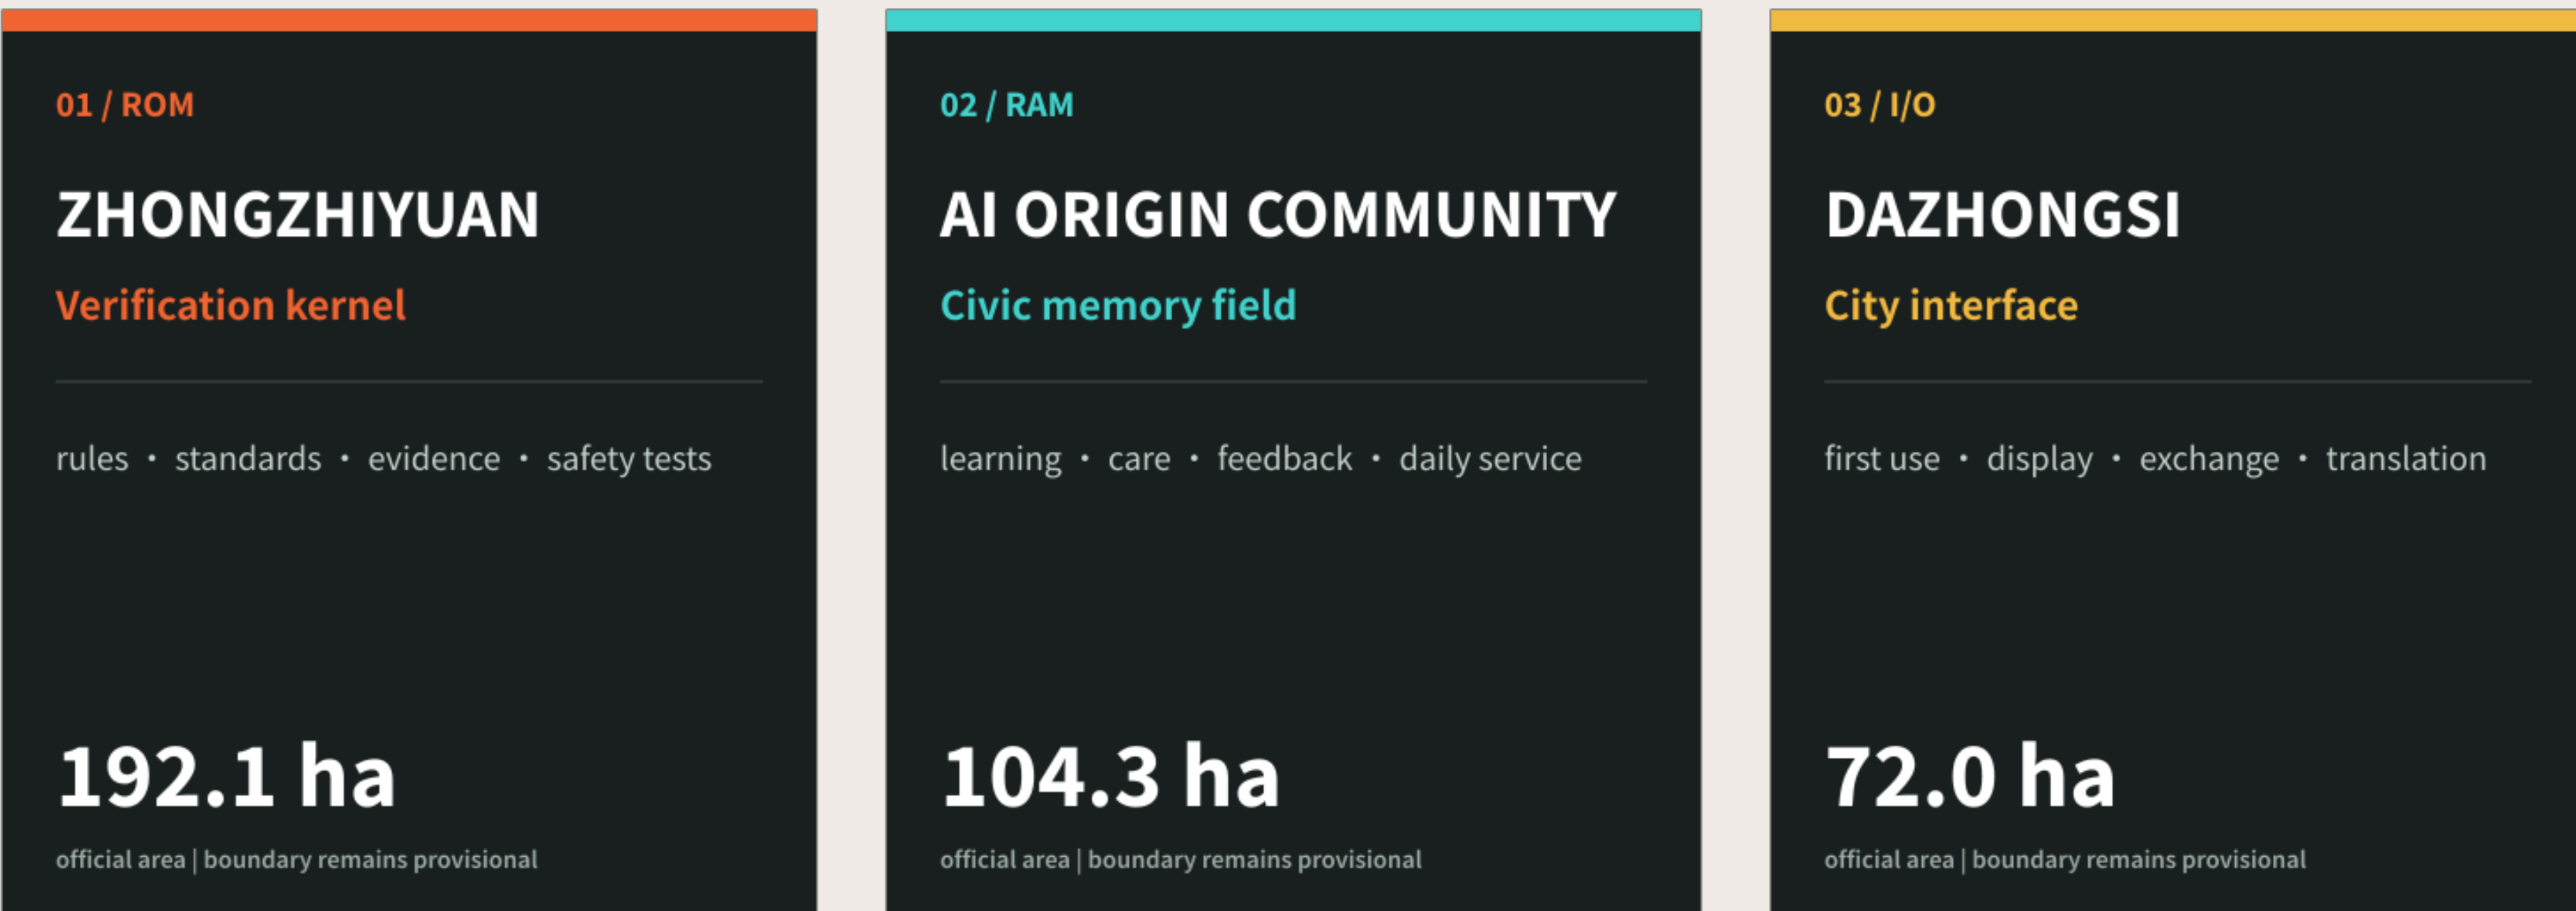

1994 is the factual anchor; spatial overlap is a design translation

Three key areas

ROM • RAM • I/O

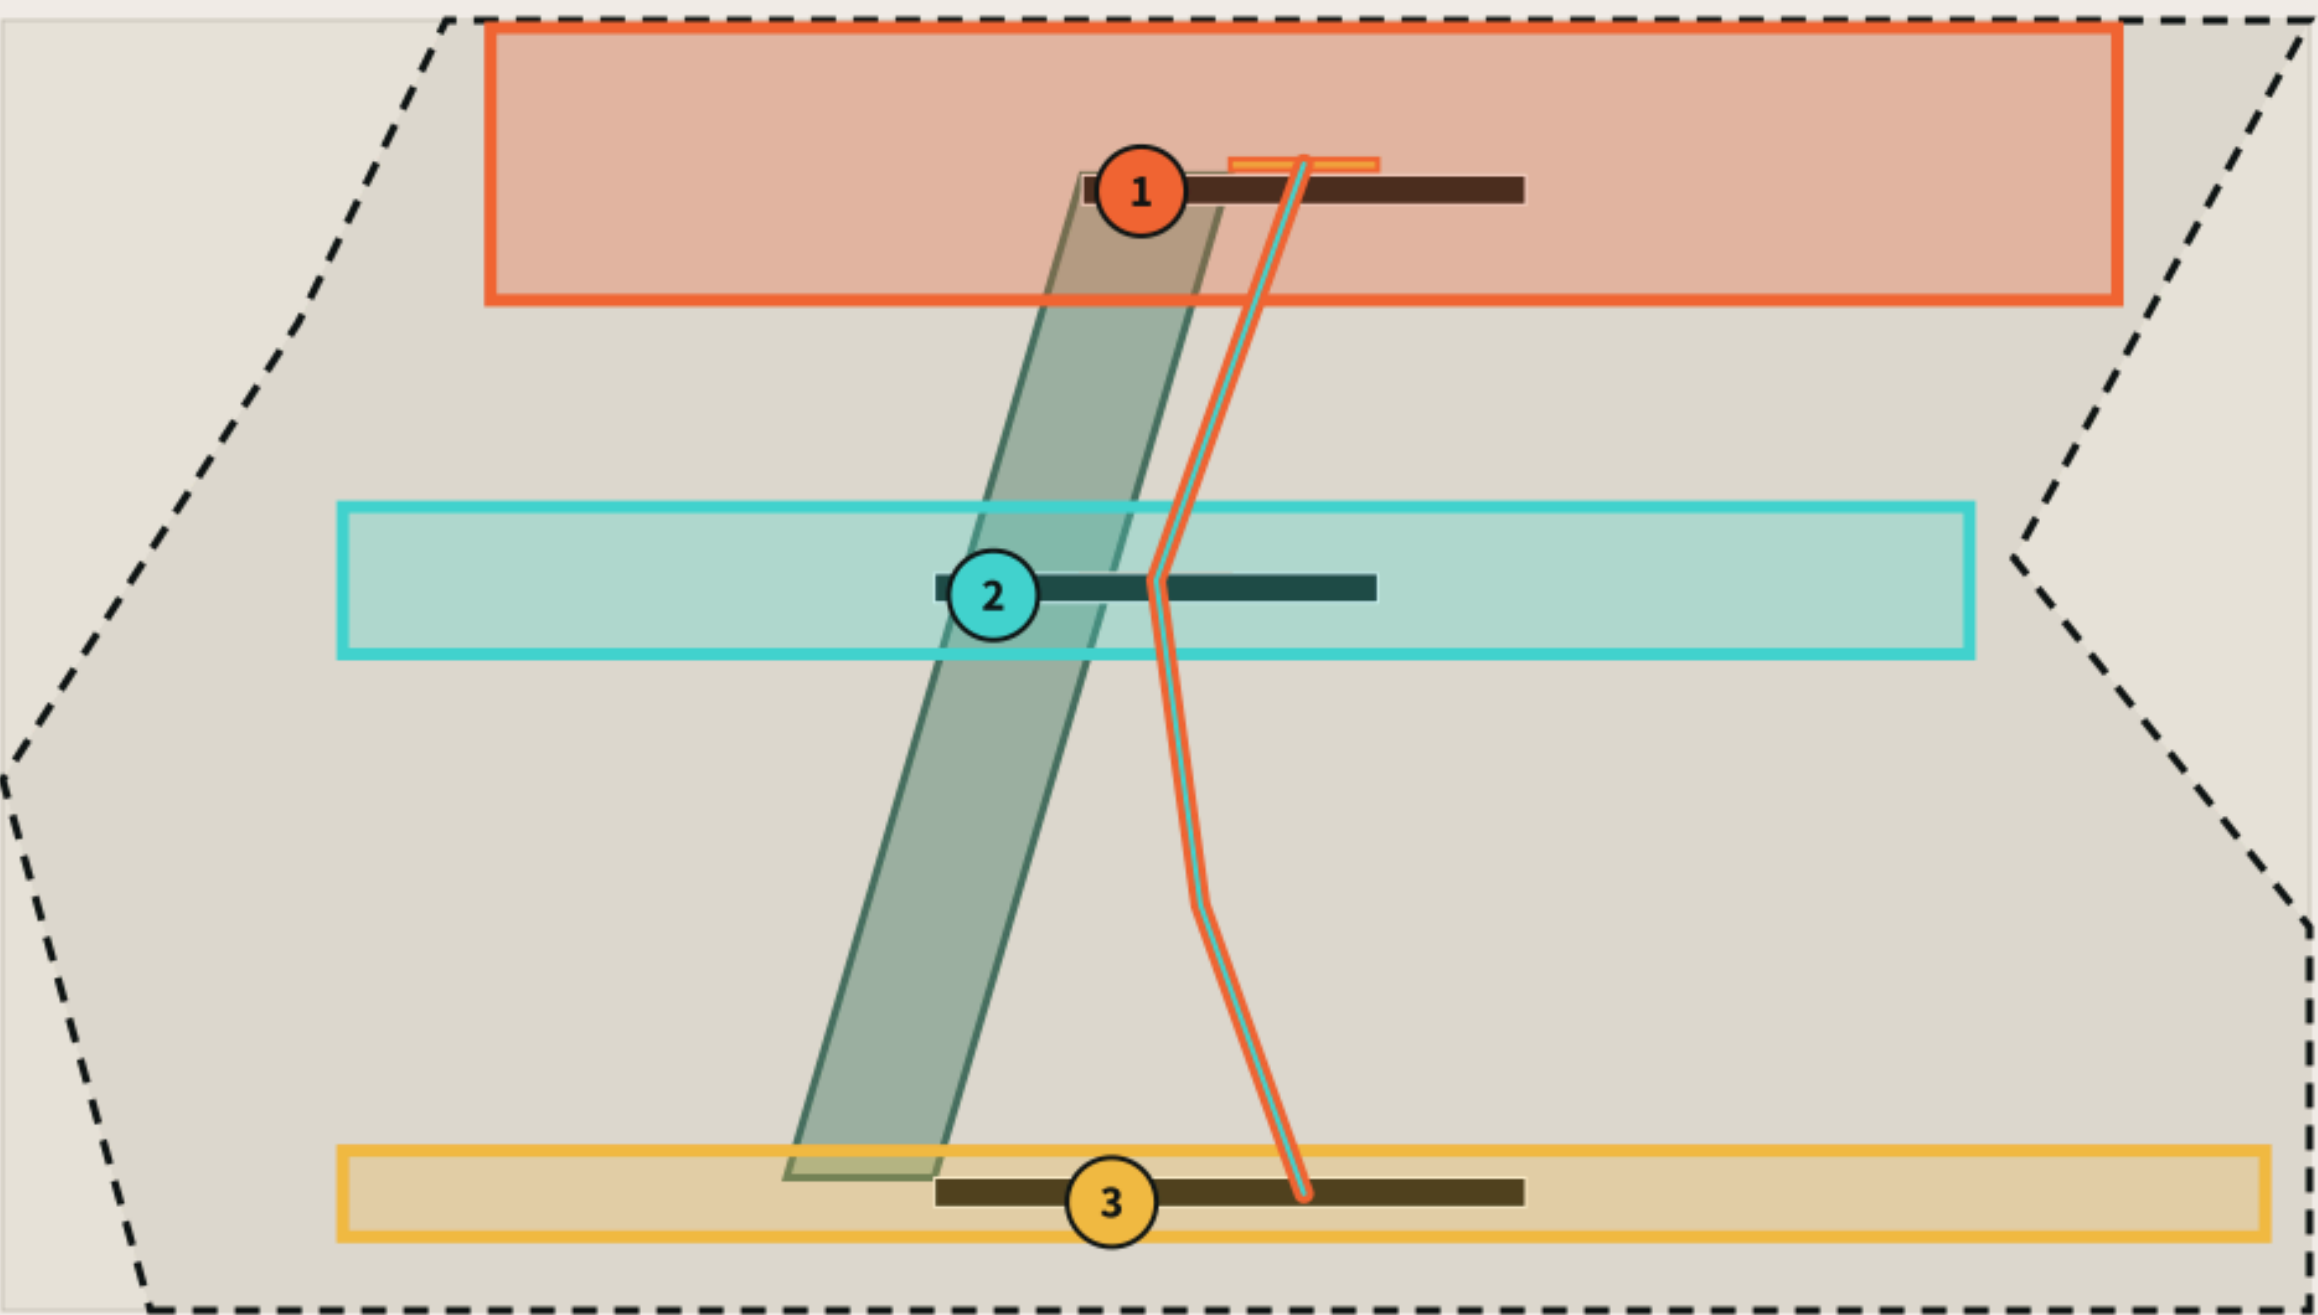

ROM / RAM / I/O are design metaphors, not site history or engineering zones

Mobility + blue-green

Secure the ordinary path before adding AI

Connections are conceptual; access continuity and service hours need field verification

- AI PATH**
advice • explanation • navigation
safe cyan
- HUMAN / OFFLINE**
paper • phone • fixed signs • staffed desk
signal orange
- BLUE-GREEN BASE**
shade • rain • rest • heritage trace
vegetation green

Refusing AI cannot block the same task

Key-area anchors

Three memory roles, three public duties

Every scenario resolves into a spatial component, accountable role and stop condition

ROM / ZHONGZHIYUAN
S05 enterprise • S06 first use • S07 low-speed observation
Evidence Yard • reversible trial table • observation line
pause if version or capability boundary is unclear

RAM / AI ORIGIN
S03 community • S04 learning • S08 health navigation • S10 feedback
Symbiotic Living Room • human desk • review post
no AI diagnosis, eligibility or high-risk decision

I/O / DAZHONGSI
S01 accessible arrival • S02 culture • S09 smart consumption
First-Use Concourse • fixed signs • first-use interface
pause if route, hours or human entry are unverified

DESIGN METAPHOR / NOT SITE HISTORY / NOT AN ENGINEERING ZONE

One public task

AI advice is not public release

An error must stop; refusal must preserve task completion

01 SAME TASK
AI and ordinary paths complete one public task

02 SHARED ENTRY
sign, desk and status are discoverable

03 AI ADVICE
source, version and confidence boundary logged

04 HUMAN RELEASE
named role signs or pauses

05 SPATIAL SYNC
interface changes; ordinary service remains

06 EXIT RECORD
correct, rollback, remove and audit

RED LINE: algorithmic output cannot directly release a public route, health decision or site operation

S01 protocol evidence

24 synthetic rule tests, not field performance

Sole first-release slice: prove safe stopping before deployment

24
synthetic rule cases

4
dual-path release

20
AI paused; ordinary path open

0
field-performance claims

24/24 = rule conformance to the defined protocol; not completion rate, wait time or satisfaction

Metrics + evidence

Separate known, provisional and unknown

Core values are preserved; provisional geometry is not presented as statutory evidence

11,412,825.386 m²

provisional-boundary recomputation

LOW CONFIDENCE | VALUE PRESERVED

5.6513%

concept green-space ratio

LOW CONFIDENCE | VALUE PRESERVED

0.1995%

concept public-space ratio

LOW CONFIDENCE | VALUE PRESERVED

- A

OFFICIAL ANNOUNCEMENT

43.6 km² / 11.4 km² / 368.4 ha
- B

PACKAGE EVIDENCE

GeoJSON / matrices / source registry
- C

CONCEPT DESIGN

scenarios • components • memory metaphor
- ?

UNKNOWN

FAR • height • ownership • field performance

Regional interfaces

Proposed exchange, not invented agreements

Exchange object, interface and evidence gap appear together

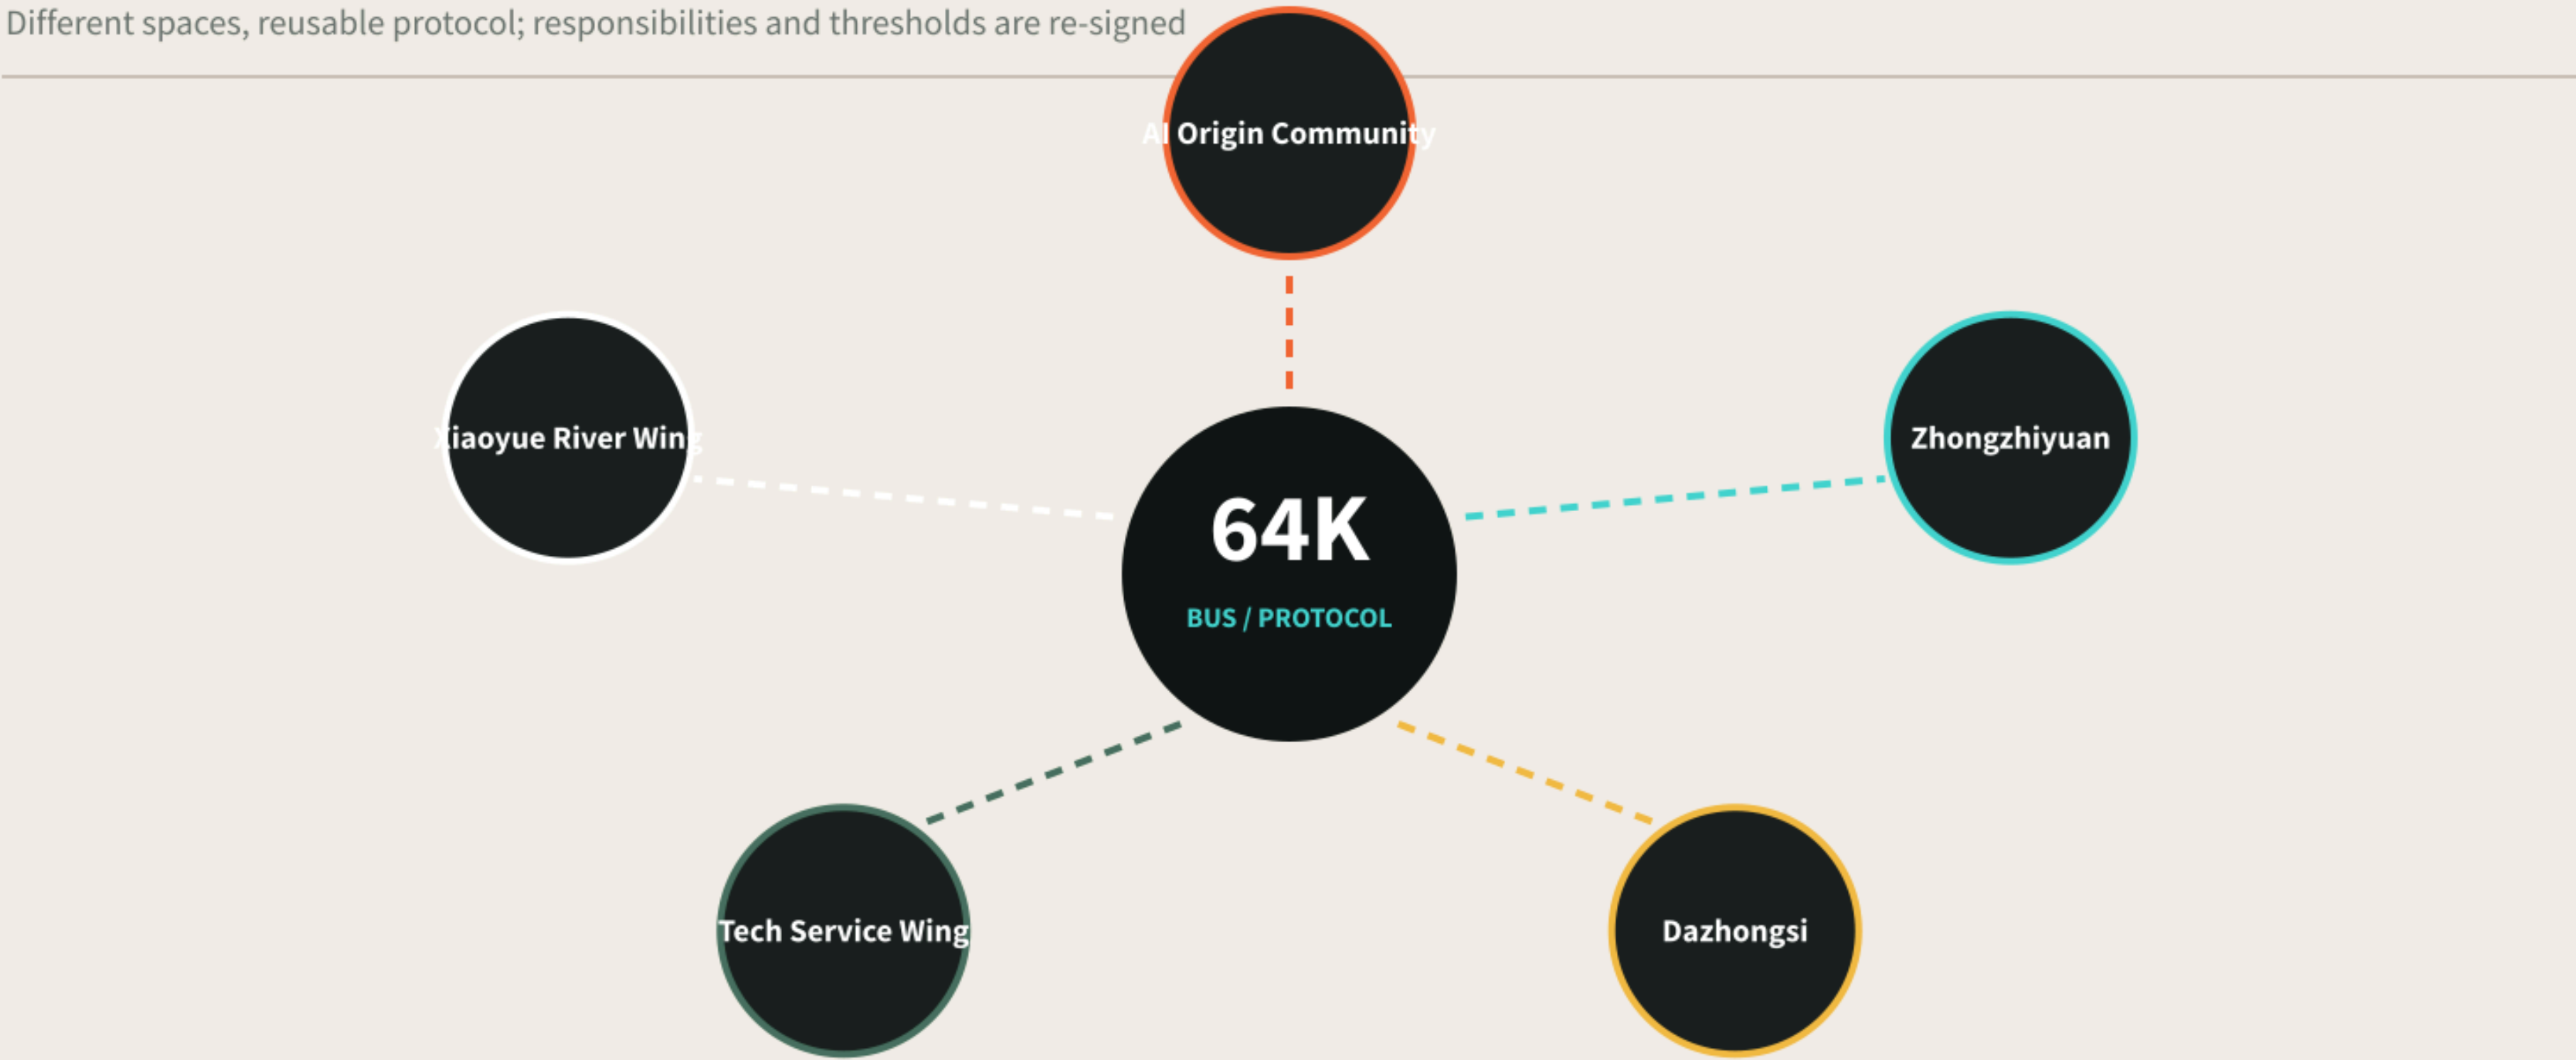

Every edge is a proposed exchange interface; partners, cycle, funding, data and authority remain unconfirmed

Three zones + two wings

One reusable public-AI protocol

Different spaces, reusable protocol; responsibilities and thresholds are re-signed

Three zones are key areas; two wings are collaboration directions, not formal boundaries or confirmed operations

Delivery loop

Source clearance → low-risk use → controlled validation

Stages are a conceptual delivery logic, not an official schedule, budget or procurement promise

01

SOURCE CLEARANCE + BASELINE

grade official / provisional / concept; baseline ordinary service

02

LOW-RISK PUBLIC USE

guidance, fixed signs, human fallback and feedback first

03

CONTROLLED VALIDATION + REUSE

S01/S06/S07 use distinct thresholds and reversible exits

No formal boundary, accessibility, privacy-safety or accountable-entity sign-off = no live use
