

JINGZHANG • PUBLIC AI INTERFACE • 2026

# 64K × JINGZHANG

From railway route-making to network openness—and a public-AI interface that remains optional, pausable and reversible.

FACTUAL ANCHOR • 1994-04-20

DESIGN METAPHOR • 8×8 / ROM • RAM • I/O

PROVISIONAL GEOMETRY • NOT A STATUTORY REDLINE

## 1909

RAILWAY • ROUTE-MAKING

## 1994

64K • NETWORK OPENNESS

## 2026

PUBLIC INTERFACE • OPTIONAL + REVERSIBLE

CONCEPT VISUAL • NOT A SITE PHOTOGRAPH

# Overview map

## One bus connects three stations and five segments

Rendered from package GeoJSON; not a statutory redline, survey or navigation map

### Scope + evidence state

**43.6 km<sup>2</sup>**

study scope | official announcement

**11.4 km<sup>2</sup>**

design scope | official announcement

**368.4 ha**

three key areas | official announcement

- Zhongzhiyuan | verify
- AI Origin | commons
- Dazhongsi | translate

Provisional rough geometry. Recalculate after formal polygons.

# Spatial base

## Concepts evolve; geometry does not drift

Technical foundation and conceptual expression are managed separately

### FROZEN

#### 9 GeoJSON layers

no redraw or coordinate change

### ITERABLE

#### 64K narrative + public interface

no statutory inference

### UNKNOWN

#### FAR / height / ownership / utilities

await formal evidence

# Three key areas

## ROM • RAM • I/O

ROM / RAM / I/O are design metaphors, not site history or engineering zones

01 / ROM

### ZHONGZHIYUAN

Verification kernel

rules • standards • evidence • safety tests

192.1 ha

official area | boundary remains provisional

02 / RAM

### AI ORIGIN COMMUNITY

Civic memory field

learning • care • feedback • daily service

104.3 ha

official area | boundary remains provisional

03 / I/O

### DAZHONGSI

City interface

first use • display • exchange • translation

72.0 ha

official area | boundary remains provisional

# Mobility + blue-green

## Secure the ordinary path before adding AI

Connections are conceptual; access continuity and service hours need field verification

### AI PATH

advice • explanation • navigation

safe cyan

### HUMAN / OFFLINE

paper • phone • fixed signs • staffed desk

signal orange

### BLUE-GREEN BASE

shade • rain • rest • heritage trace

vegetation green

Refusing AI cannot block the same task

# Metrics + evidence

## Separate known, provisional and unknown

Core values are preserved; provisional geometry is not presented as statutory evidence

**11,412,825.386 m<sup>2</sup>**

provisional-boundary recomputation

LOW CONFIDENCE | VALUE PRESERVED

**5.6513%**

concept green-space ratio

LOW CONFIDENCE | VALUE PRESERVED

**0.1995%**

concept public-space ratio

LOW CONFIDENCE | VALUE PRESERVED

### OFFICIAL ANNOUNCEMENT

43.6 km<sup>2</sup> / 11.4 km<sup>2</sup> / 368.4 ha

### PACKAGE EVIDENCE

GeoJSON / matrices / source registry

### CONCEPT DESIGN

scenarios • components • memory metaphor

### UNKNOWN

FAR • height • ownership • field performance

# Dual-origin bus

1909 route • 1994 network • 2026 public interface

1994 is the factual anchor; spatial overlap is a design translation

# One public task

## AI advice is not public release

An error must stop; refusal must preserve task completion

01

### SAME TASK

AI and ordinary paths complete one public task

02

### SHARED ENTRY

sign, desk and status are discoverable

03

### AI ADVICE

source, version and confidence boundary logged

04

### HUMAN RELEASE

named role signs or pauses

05

### SPATIAL SYNC

interface changes; ordinary service remains

06

### EXIT RECORD

correct, rollback, remove and audit

**RED LINE: algorithmic output cannot directly release a public route, health decision or site operation**

# S01 protocol evidence

## 24 synthetic rule tests, not field performance

Sole first-release slice: prove safe stopping before deployment

24/24 = rule conformance to the defined protocol; not completion rate, wait time or satisfaction

# Regional interfaces

## Proposed exchange, not invented agreements

Exchange object, interface and evidence gap appear together

Every edge is a proposed exchange interface; partners, cycle, funding, data and authority remain unconfirmed

# Three zones + two wings

## One reusable public-AI protocol

Different spaces, reusable protocol; responsibilities and thresholds are re-signed

Three zones are key areas; two wings are collaboration directions, not formal boundaries or confirmed operations

# Key-area anchors

## Three memory roles, three public duties

Every scenario resolves into a spatial component, accountable role and stop condition

### ROM / ZHONGZHIYUAN

S05 enterprise • S06 first use • S07 low-speed observation

Evidence Yard • reversible trial table • observation line

pause if version or capability boundary is unclear

### RAM / AI ORIGIN

S03 community • S04 learning • S08 health navigation • S10 feedback

Symbiotic Living Room • human desk • review post

no AI diagnosis, eligibility or high-risk decision

### I/O / DAZHONGSI

S01 accessible arrival • S02 culture • S09 smart consumption

First-Use Concourse • fixed signs • first-use interface

pause if route, hours or human entry are unverified

DESIGN METAPHOR / NOT SITE HISTORY / NOT AN ENGINEERING ZONE

# Delivery loop

## Source clearance → low-risk use → controlled validation

Stages are a conceptual delivery logic, not an official schedule, budget or procurement promise

**01**

### SOURCE CLEARANCE + BASELINE

grade official / provisional / concept; baseline ordinary service

**02**

### LOW-RISK PUBLIC USE

guidance, fixed signs, human fallback and feedback first

**03**

### CONTROLLED VALIDATION + REUSE

S01/S06/S07 use distinct thresholds and reversible exits

P0 SOURCE

P1 ORDINARY PATH

P2 CONTROLLED TEST

P3 PUBLIC REVIEW

No formal boundary, accessibility, privacy-safety or accountable-entity sign-off = no live use
