

A0-1 Overall Design Structure

One spine, three beacons, two wings: the green spine runs north-south; the beacons host validation, open source and experience.

- Brand vs status colours on separate tracks; RED only retired/rolled back.
- Status semantics: green experienceable, amber controlled, red retired.
- Supply rules: amber on terms, green stable, red recoverable.
- This board is explanatory; package GeoJSON/JSON remain authoritative.

Amber • on terms
pilots evaluated at expiry; extended green or turned red.

Green • stable
the spatial promise does not break when operators change.

Red • recoverable
after decommissioning, carriers return to redistribution.

Status colours (single meaning)

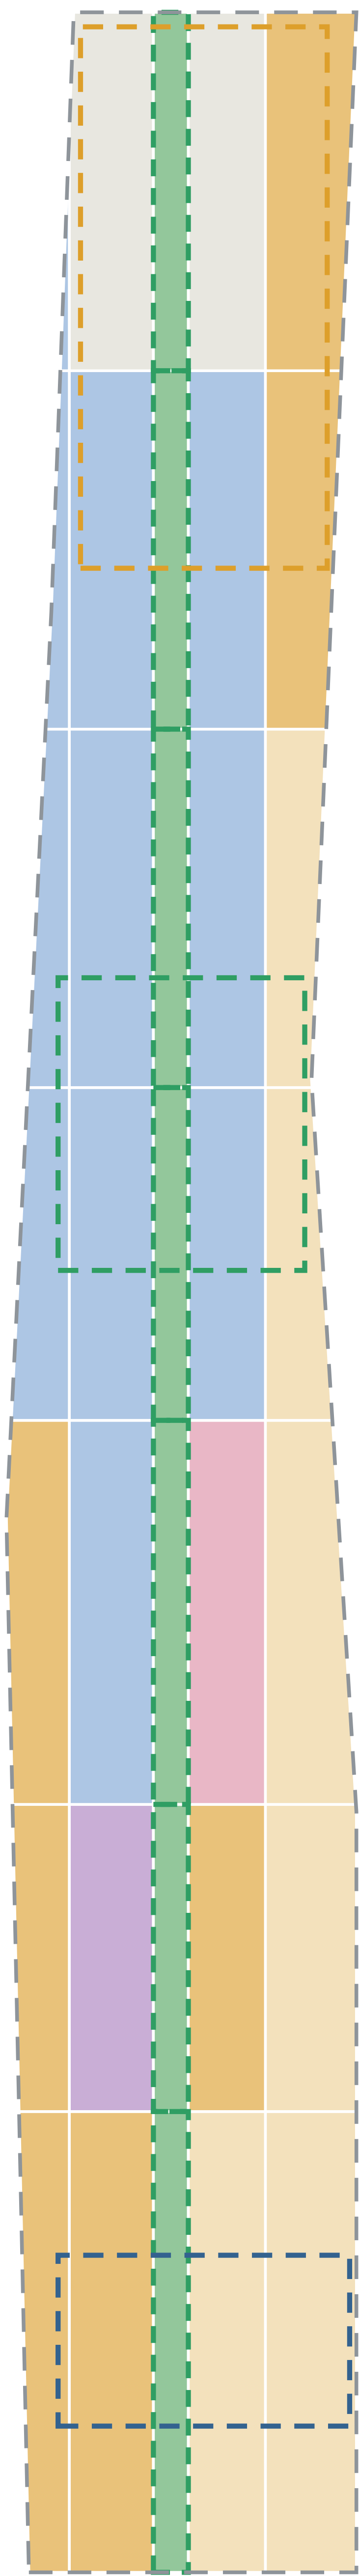

- Green = experienceable
- Amber = controlled testing
- Red = retired/rolled back (only meaning)

District brand colours (identity only)

- amber = Zhongzhiyuan
- green = AI Origin
- blue = Dazhongsi

A0-2 Land Use and Urban Renewal

35 parcels fully cover the boundary; research, commercial and residential dominate.

- 107 footprints, density approx. 0.32; capacity logic only.
- Green approx. 129.5 ha along the spine; reserved approx. 83.0 ha at the north gateway.
- Retain/renovate/demolish conceptual; FAR/height stay unknown.
- Classes follow the national land-use classification (0803 Culture, 0804 Education).

Commercial	256.2 ha
Residential	251.0 ha
Research	341.6 ha
Culture	—
Education	—
Park green	129.5 ha
Reserved	83.0 ha

A0-3 Transport, Rail, Slow Mobility and Municipal Support

Concept roads approx. 32.4 km; signal-spine greenway approx. 9.7 km.

- Dazhongsì four quadrants, Wudaokou/Qinghua East Rd West links and ring crossings first.
- Orderly non-motorised parking and clear interchanges as directional organisation.
- Rail interchange stays directional, pending redlines, ridership and municipal data.
- Redlines, sections and junction design await official road data.

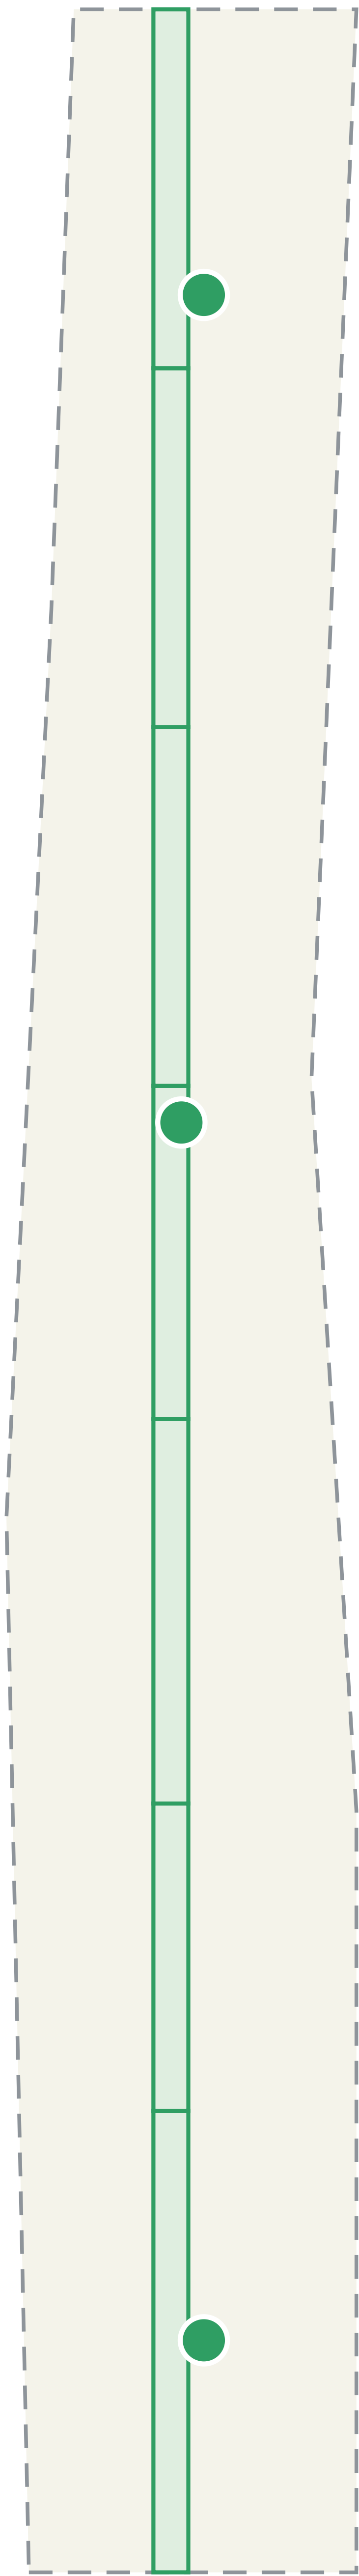

32.4 km
Concept roads

9.7 km
Spine greenway

- Secondary road
- Branch road
- Greenway / slow path
- Park green
- Beacon plaza

A0-4 Jing-Zhang Park Vitality Belt and Blue-Green Space

The spine green belt stitches east-west, runs north-south and links three beacon plazas.

- Green ratio approx. 11.3%; three beacon plazas approx. 4.1 ha.
- Component library removable, retractable, retirable; decommission restores plain state.
- Blue-green overlay with slow network; AI navigation as a public service.
- Greenway continuity awaits blue-line and redline data.

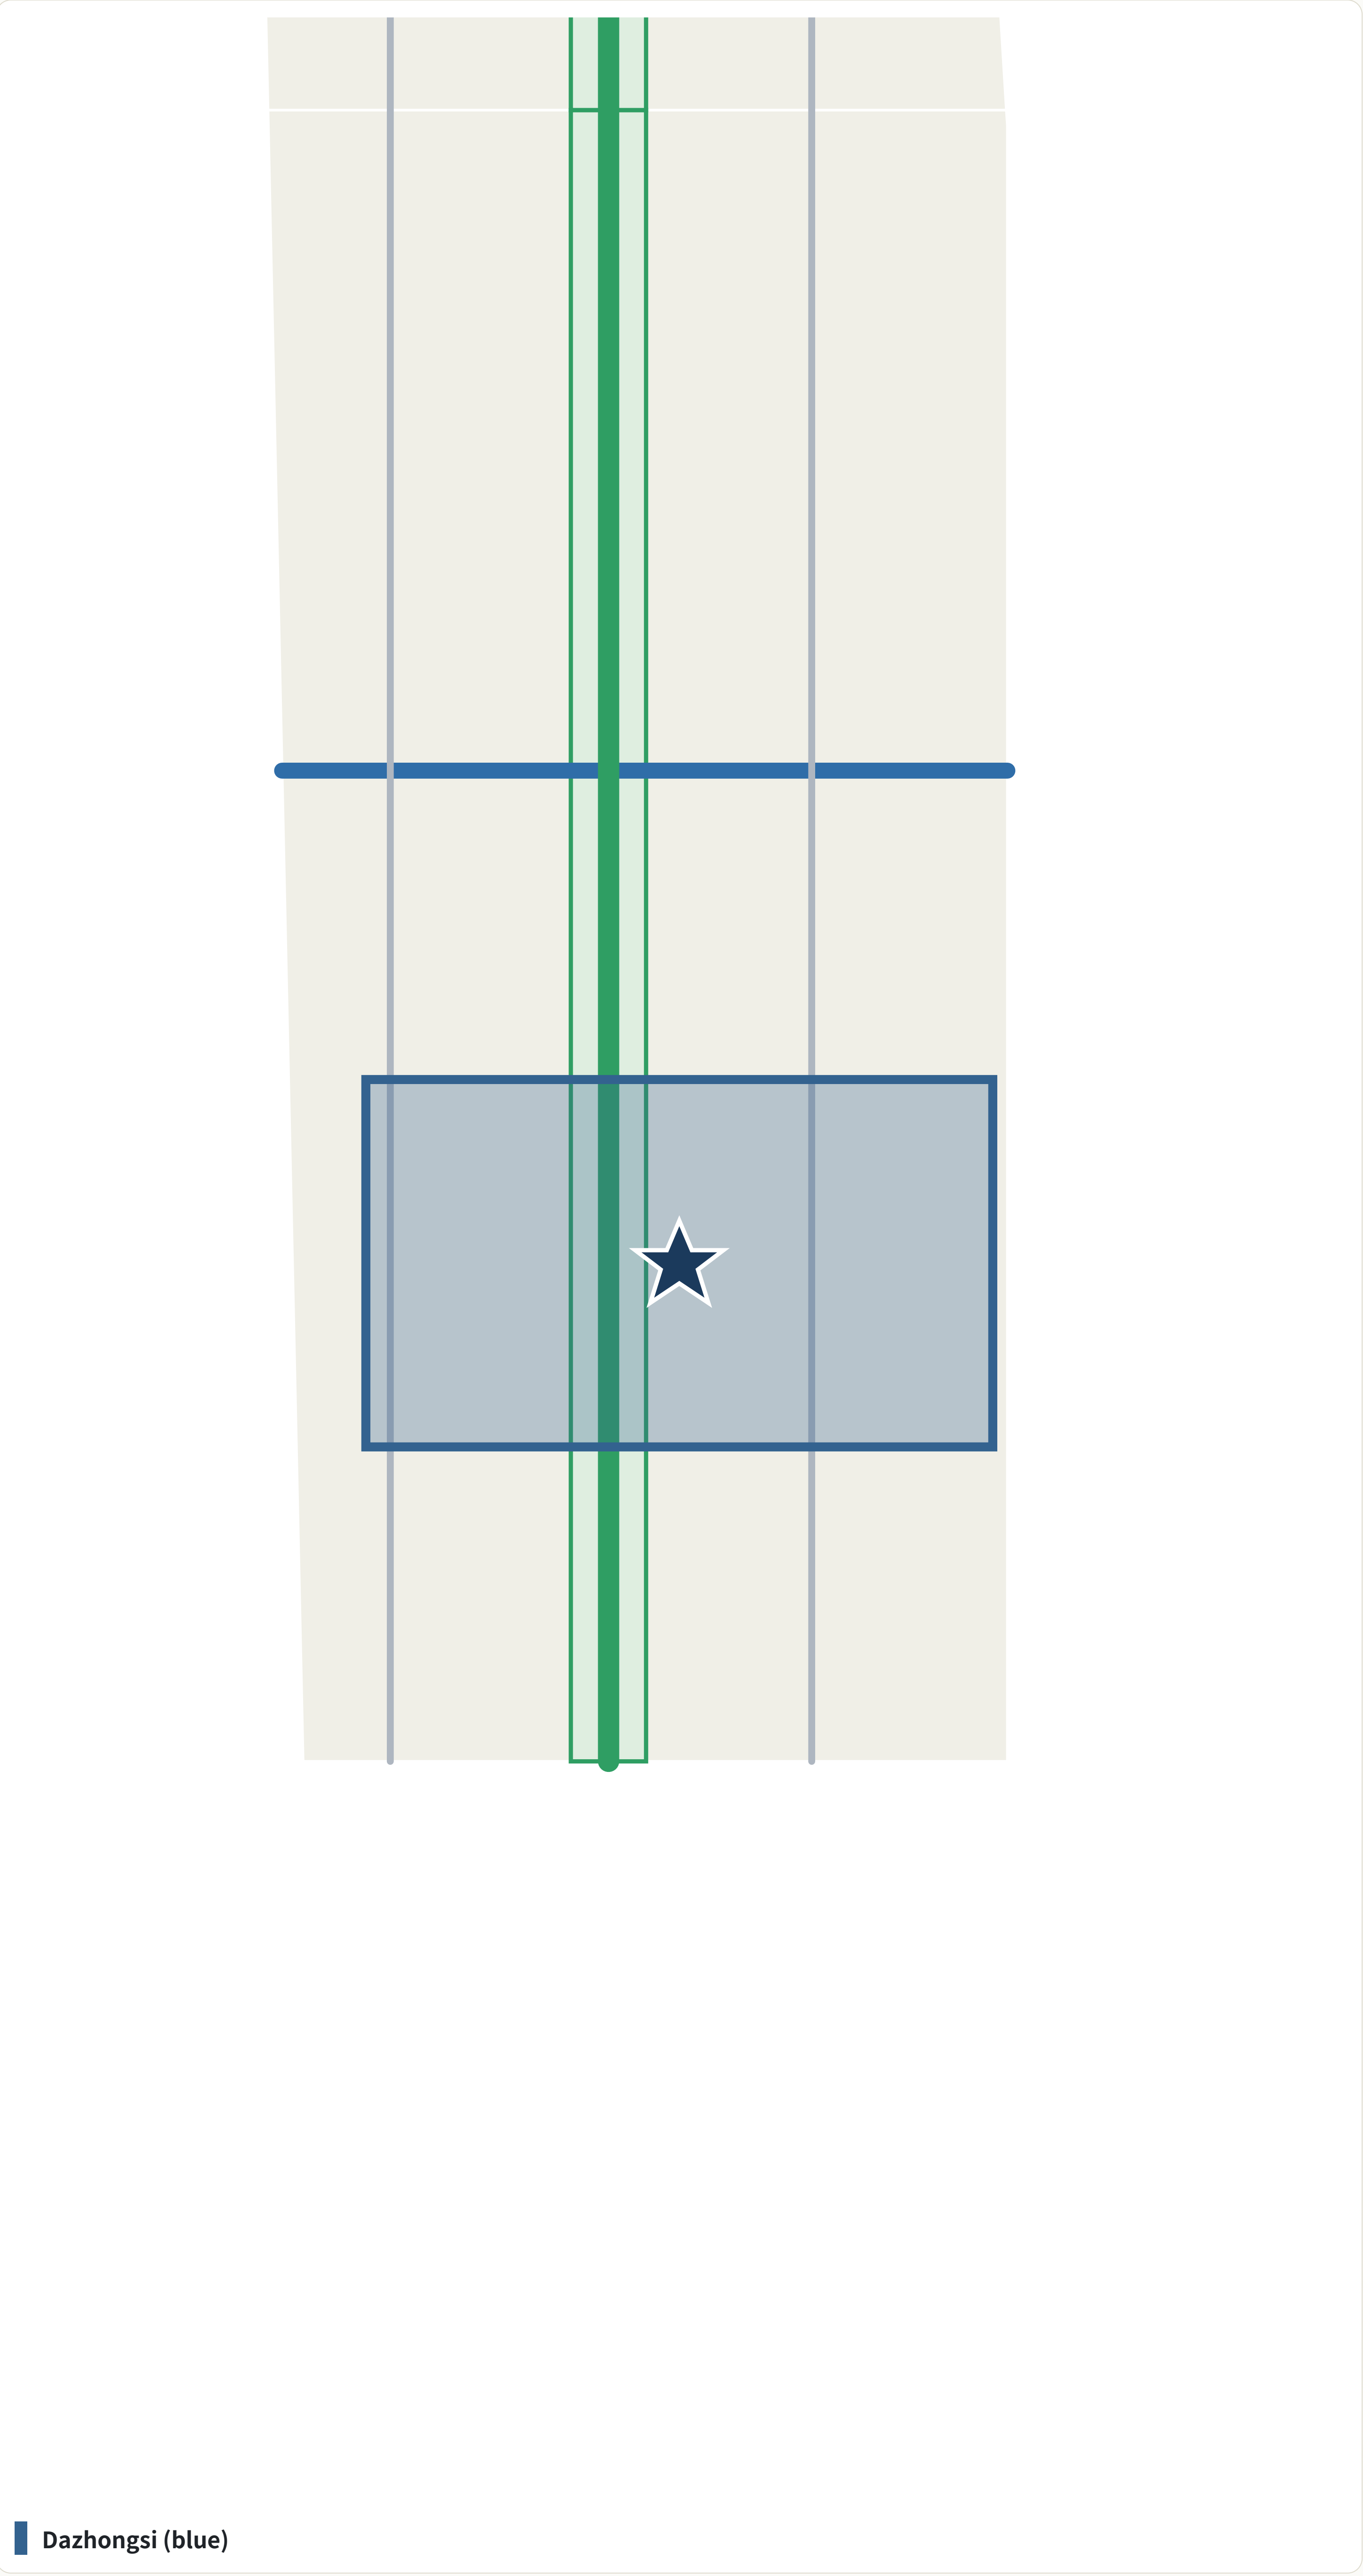

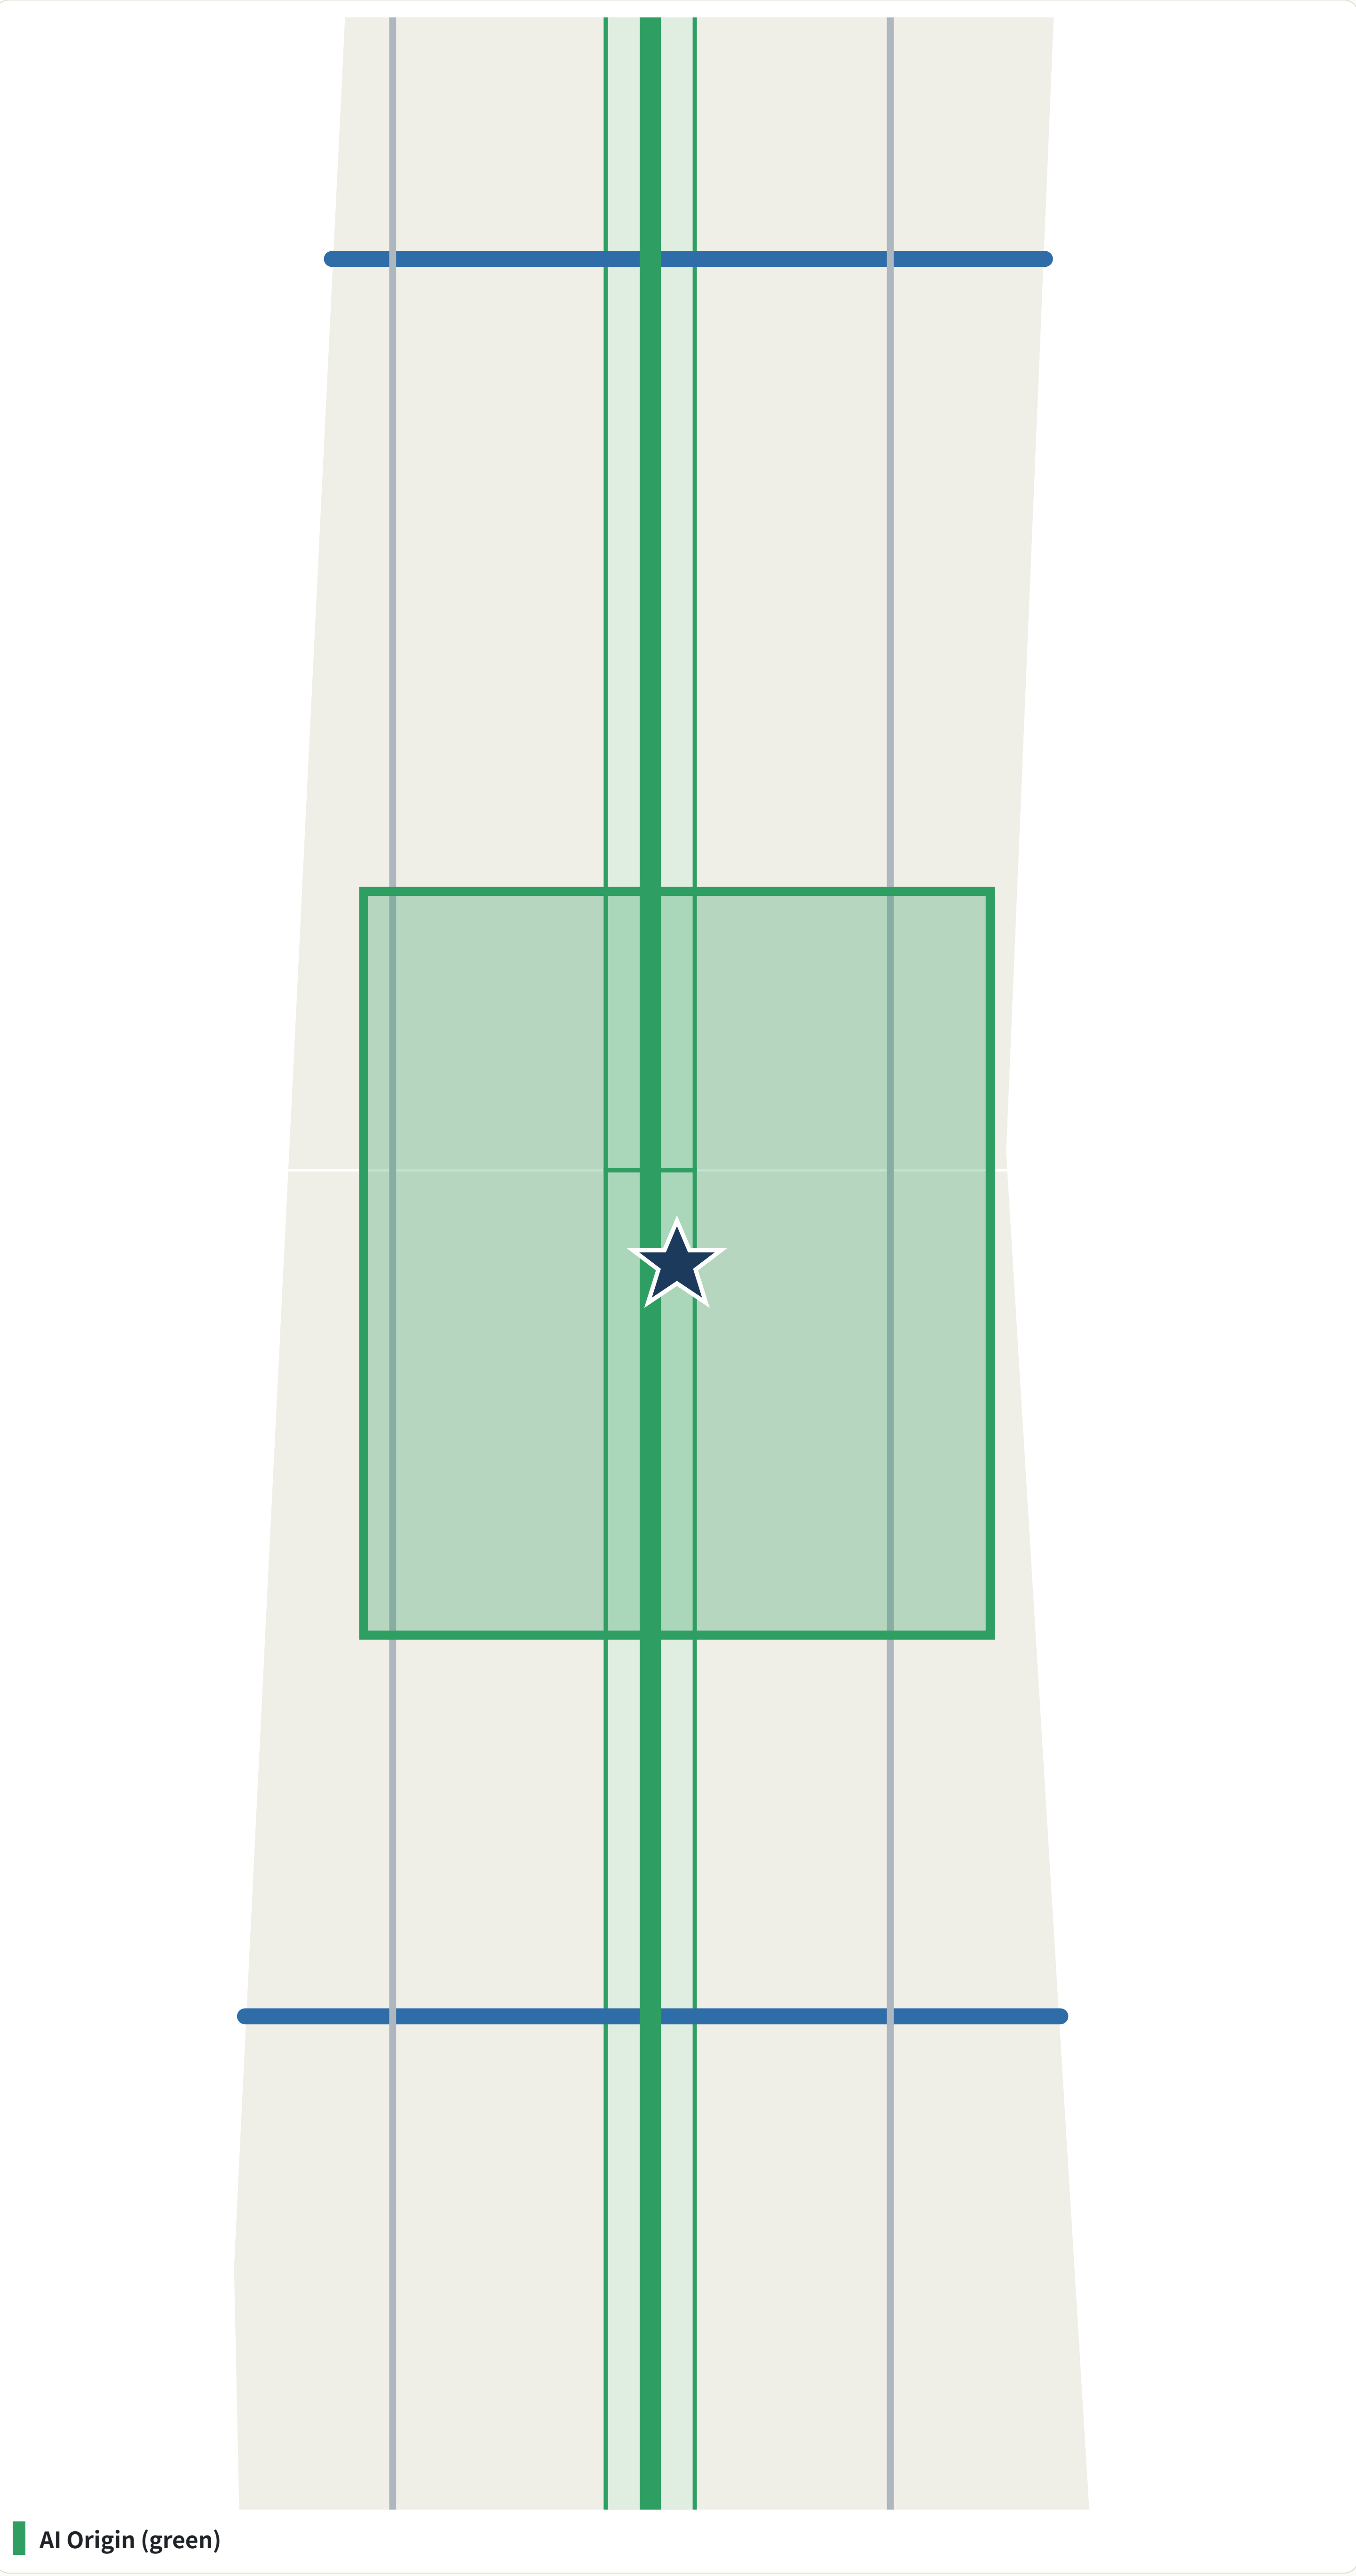

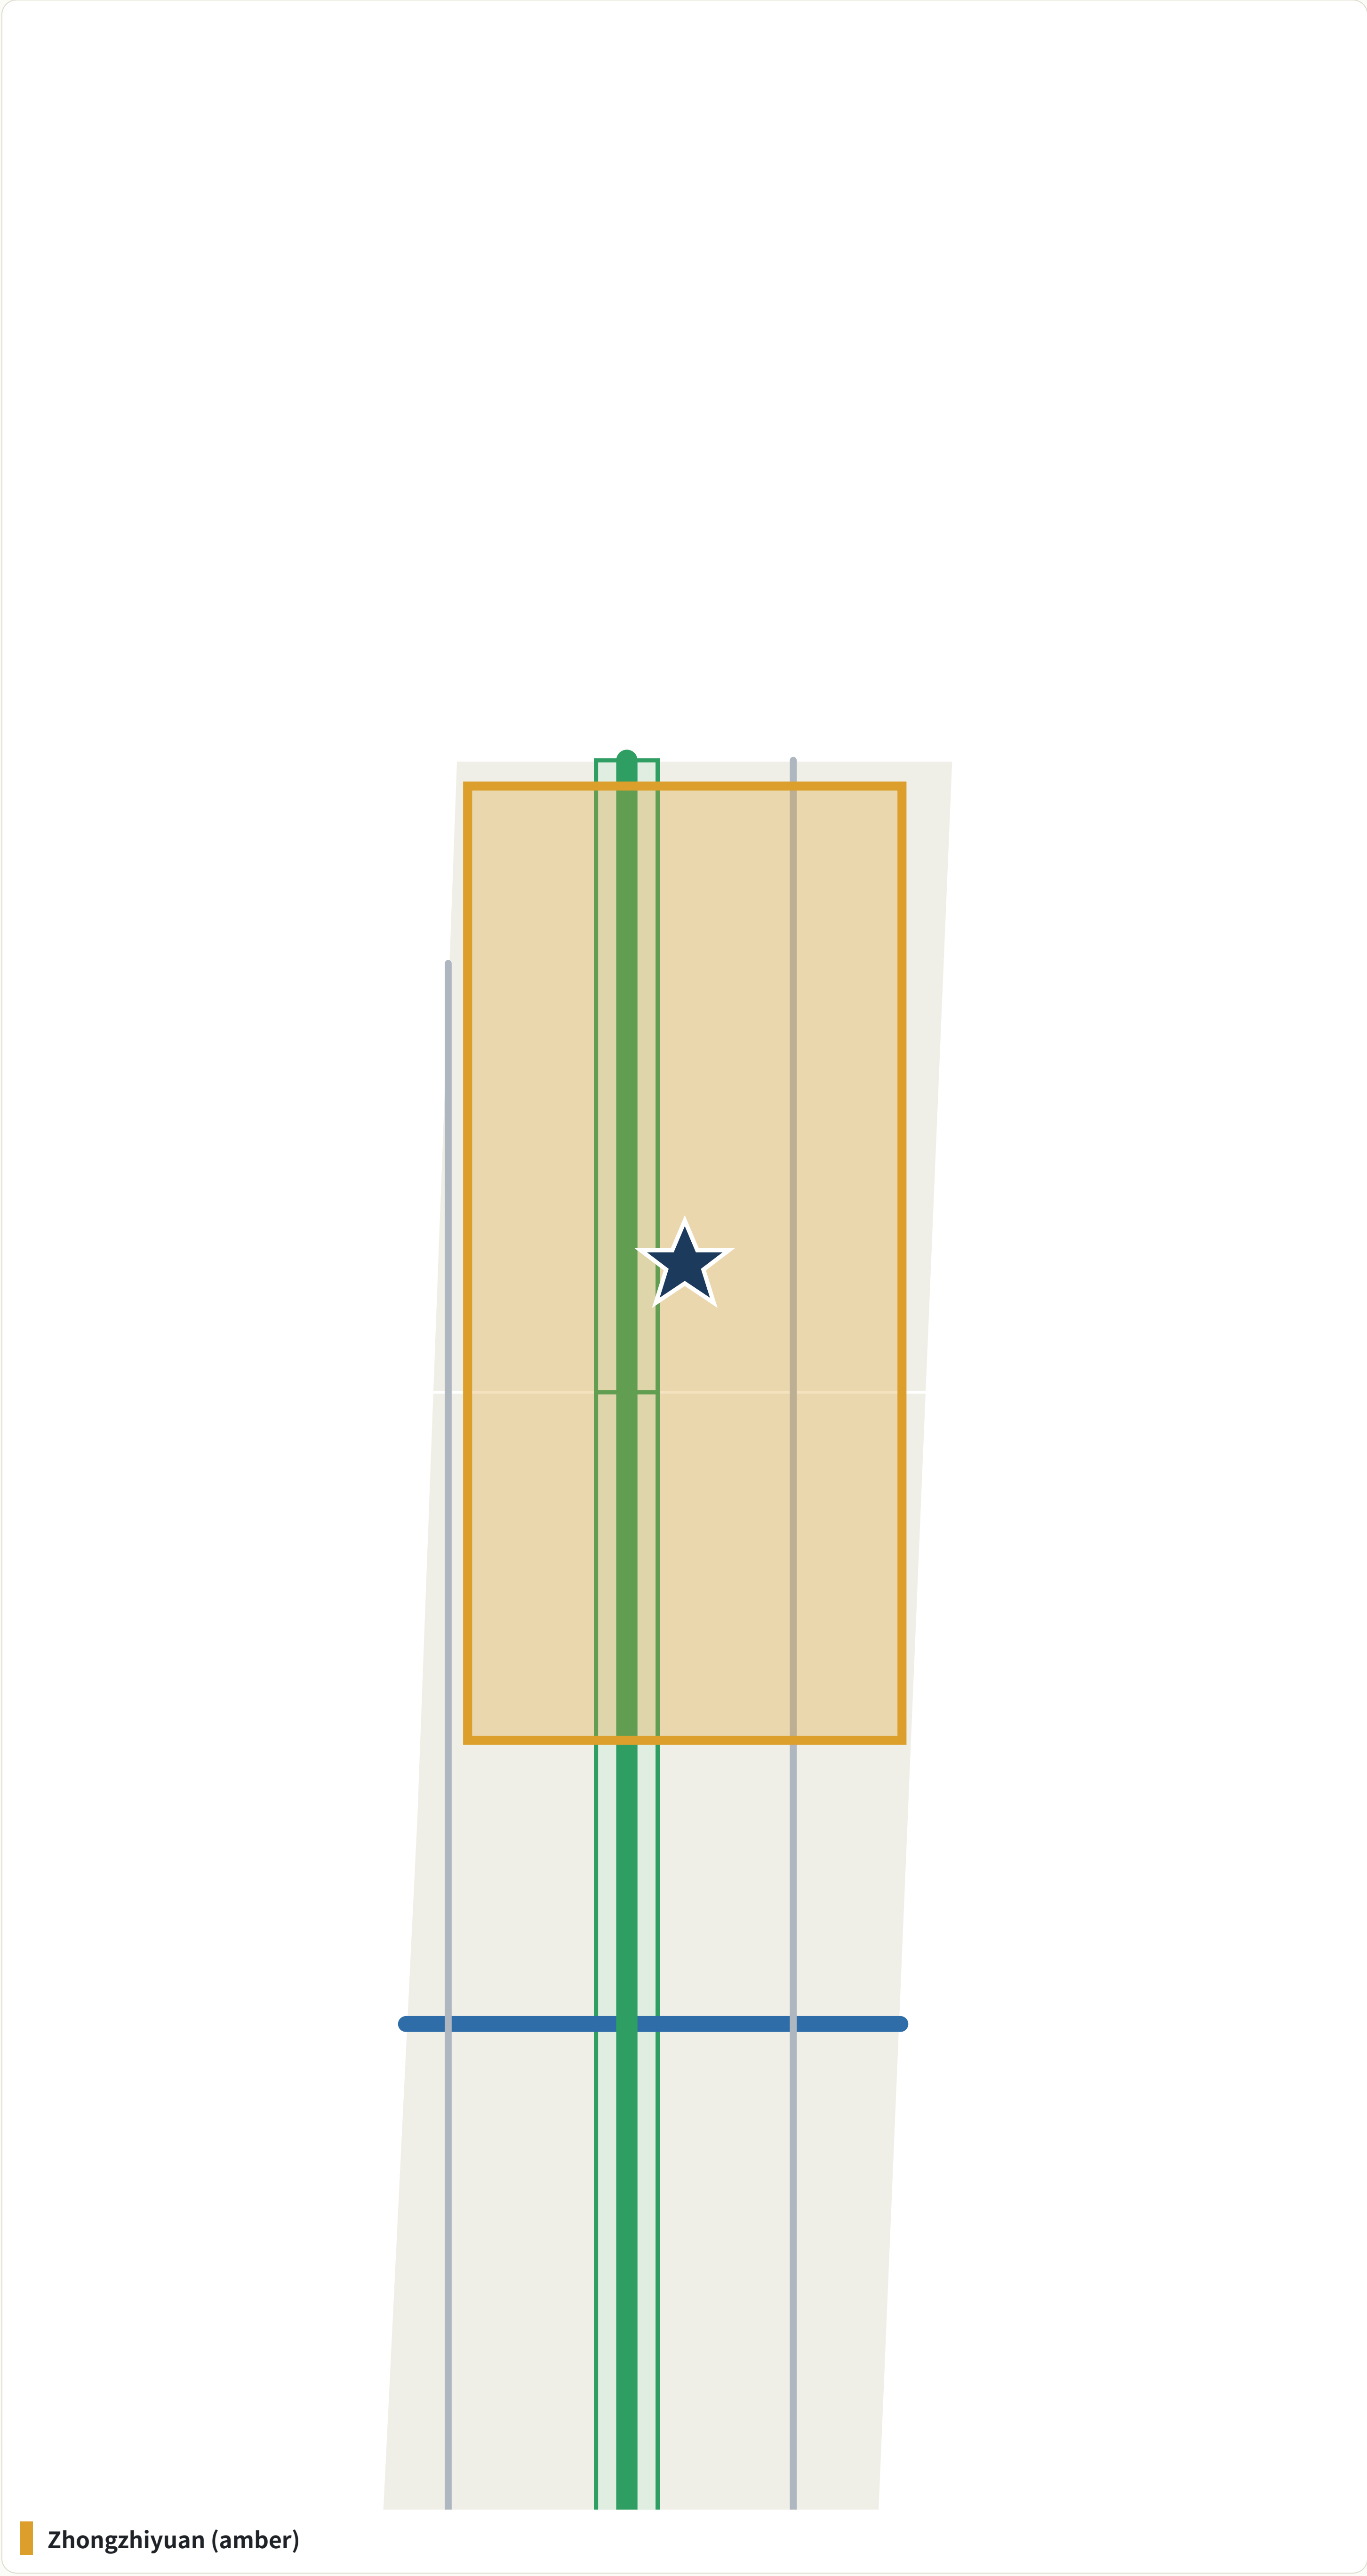

11.3%
Green ratio

≈ 4.1 ha
Beacon plazas

- Legend
- Signal-spine green belt
 - Beacon plaza
 - Provisional boundary

A0-5 Detailed Design of the Three Key Areas

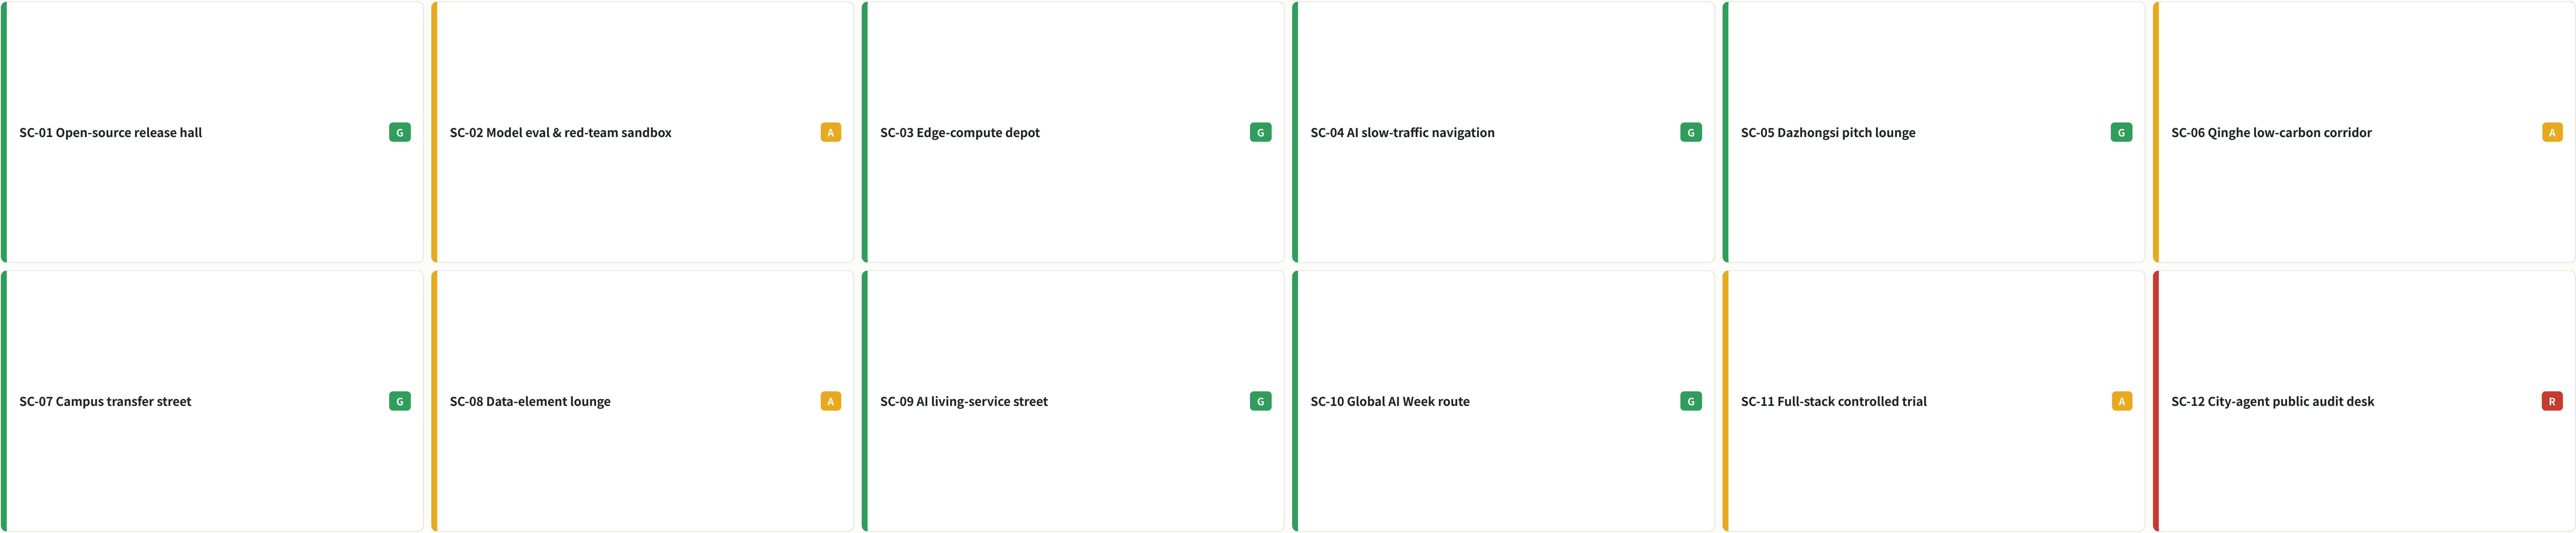

Three beacons: validation (amber), open source (green), experience (blue).

- Zhongzhiyuan: 3-tier gates, controlled labs, public audit desk, riverside lighthouse.
- AI Origin: open-source plaza, transfer street, campus stitching axis, origin stone.
- Dazhongsi: four-quadrant walkability, pitch lounge, signal bell.
- Key-area outlines are provisional proxies; full recalculation on official KEY_AREA data.

A0-6 AI Scenarios and Operations

12 scenario cards (3 test/validation); 5 user personas.

Open-source developers

Origin open-source plaza, public code wall, night collaboration space

No personal-trajectory collection; aggregated counts only

Startups & researchers

Zhongzhiyuan shared test field, edge-compute points, validation gates

Compute/data services require separate authorisation

Corporates & international visitors

Dazhongsi station-front interface, beacon plaza, pitch lounge

Logos and cases require rights clearing

Residents

Spine slow-mobility loop, embedded community services, tiered events

Persona not used for commercial targeting

University members

Campus-park stitching axis, transfer street, AI education points

Campus data and research outputs require authorisation

Spring • open-source week

Beacon Festival S1

Summer • controlled-testing season

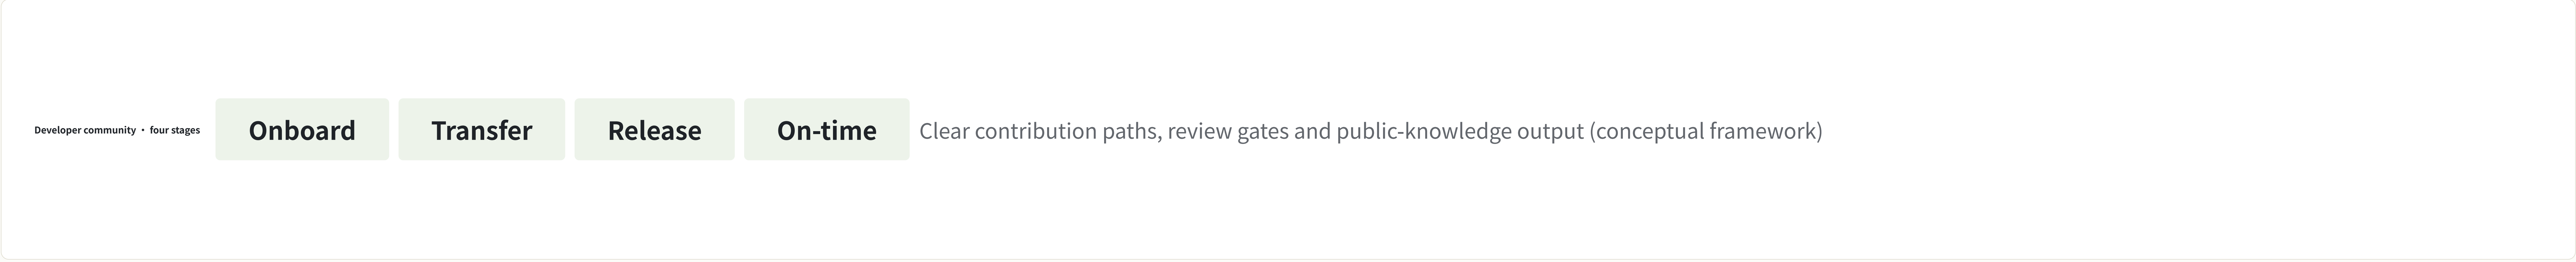

Beacon Festival S2

Autumn • release week

Beacon Festival S3

Winter • governance review

Beacon Festival S4

- Beacon Festival seasons: spring open-source, summer controlled tests, autumn releases, winter governance review.
- Developer community: onboard → transfer → release → on-time.

- All scenarios conceptual; no approved operations implied.
- The 48-hour fault drill is a designed script (not executed).

A0-7 Metrics Recalculation and Compliance

Site 1,141.3 ha; key areas 369.3 ha (announced approx. 368.4 ha, pending official polygons).

Site area 1,141.3 ha recomputed from site_boundary (provisional)	Key areas total 369.3 ha announcement approx. 368.4 ha; awaiting official polygons	Green ratio 11.3% green_space / site area	Public-space ratio 0.36% public_space / site area	Building density 0.32 107 concept footprint units
Land-use parcels 35 full coverage, no gaps	Scenario cards 12 including 3 test/validation	Personas / landmarks / cases 5 / 3 / 7 taskbook agent.2-4 coverage	FAR / building height unknown no official regulatory conditions; reasons registered	Self-check status 4 gates PASS KEY_AREA_PROVISIONAL disclosed

- Green 11.3%, public space 0.36%, density 0.32 (in-package, EPSG:4548).
 - Four gates PASS; FAR/height unknown with registered reasons.
- compliance 23 mapped; standards covered; design depth all complete.
 - Full-package recalculation once official boundary and control data arrive.
