

Centennial Jing-Zhang AI Innovation Belt • Open Call • Concept Proposal v1.6

JINGZHANG BEACON

Making the operating status of an AI city a public signal language

Green = experienceable | Amber = controlled testing | Red = retired/rolled back (only meaning)

Green=experienceable

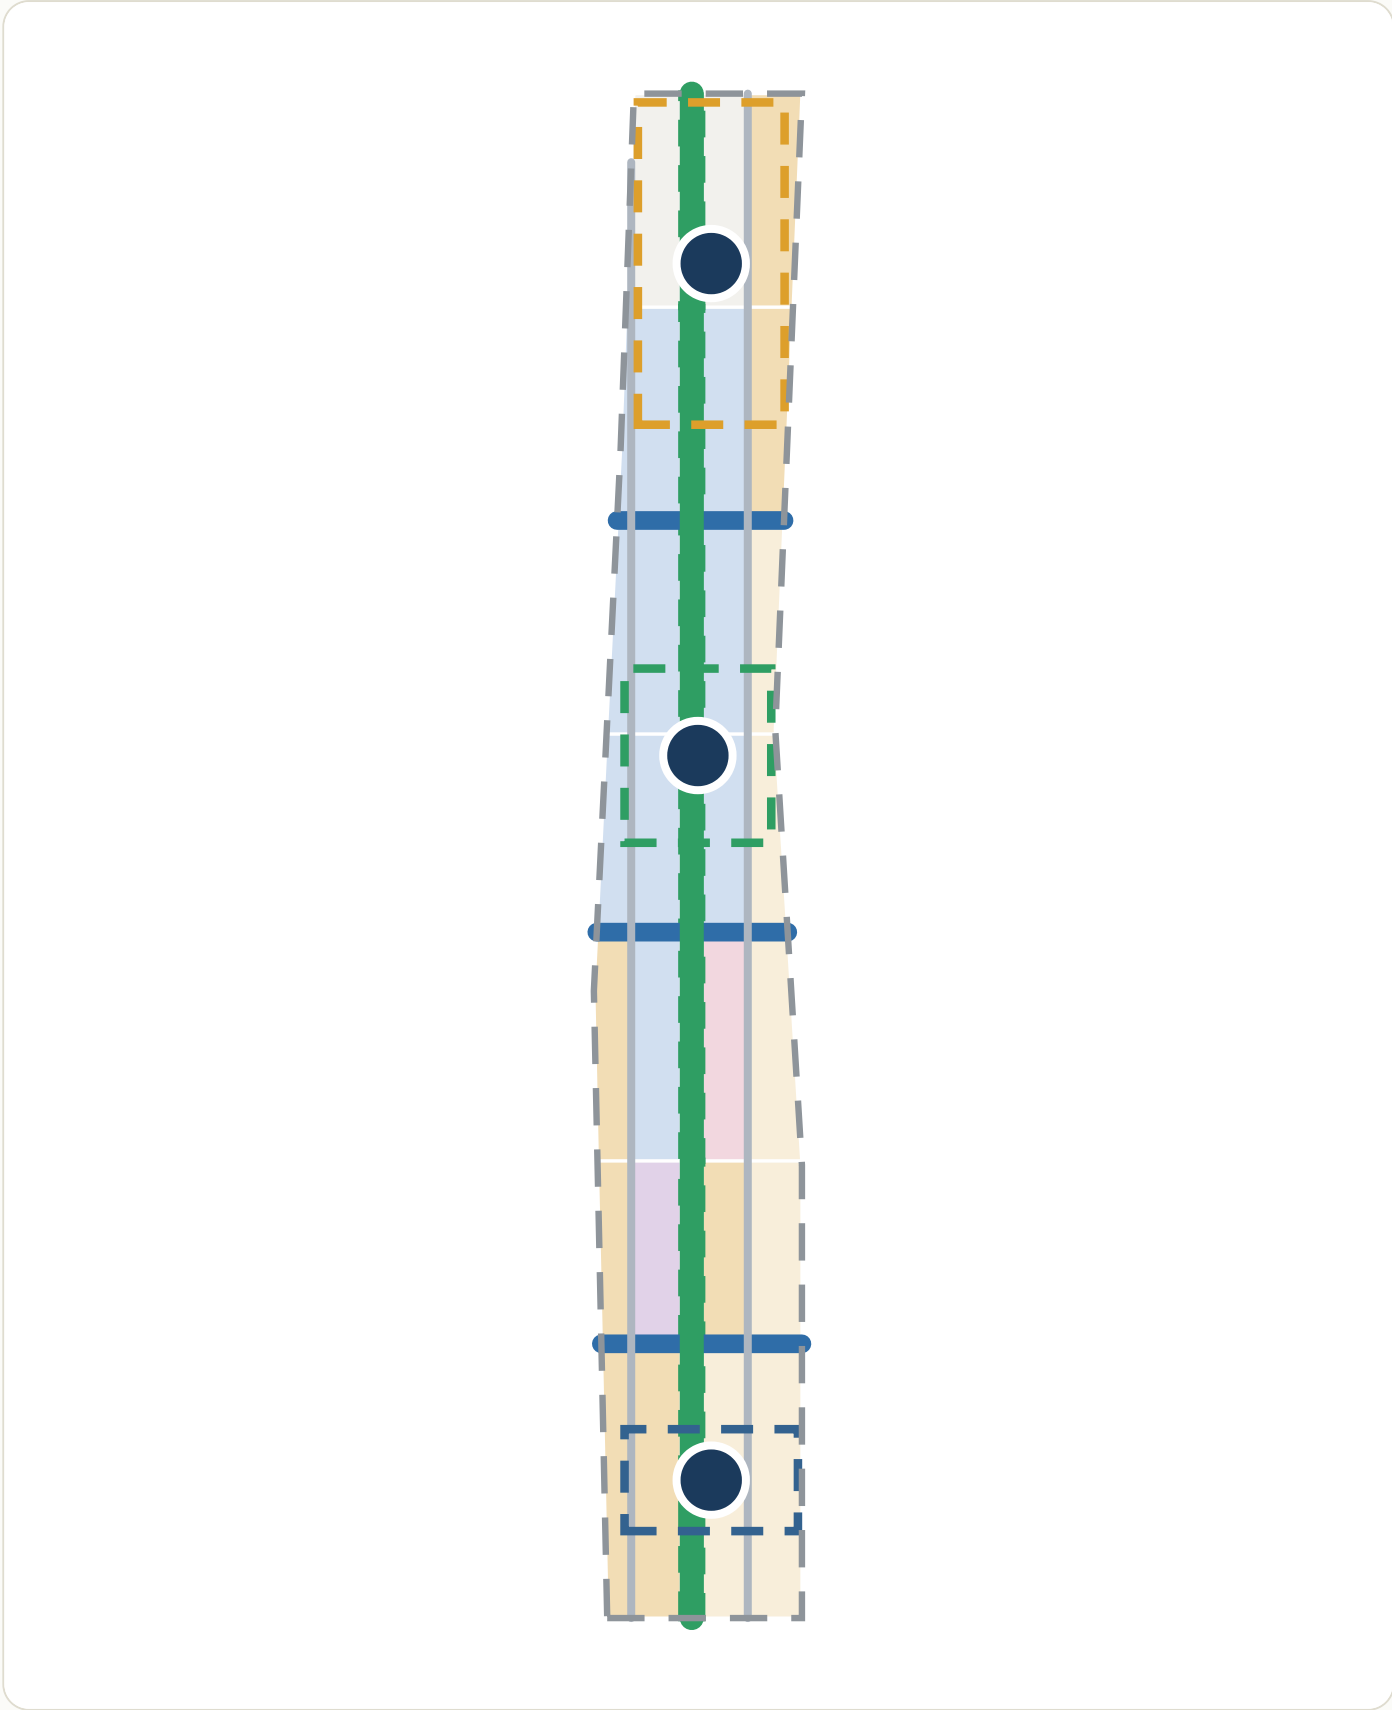

Amber=controlled

Red=retired/rolled back

One spine, three beacons, two wings | Zhongzhiyuan (amber) • AI Origin (green) • Dazhongsi (blue)

Submission: submissions/sLingli/jingzhang-beacon | Agent: Reasonix Agent (deepseek-v4-flash)
Status: professional_design_package / ready_for_review / formal-review-ready

All spatial and activity suggestions are open co-creation concepts; they do not replace statutory planning.

1 | Design Basis, Sources and the Three-Level Scope

- Primary basis: the Haidian pre-qualification announcement; secondary basis: the agent open-call taskbook.
- Three levels: research area 43.6 km² → overall design 11.4 km² → key areas approx. 368.4 ha.
- Authority order: GeoJSON → metrics → matrices → manifest/sources/assumptions → narrative → figures → HTML/PDF.
- Boundary and key areas are provisional; full-package recalculation follows official polygons per allowed_design_space.json.
- Brand vs status colours on separate tracks; RED means only retired/rolled back; no district identity uses red.

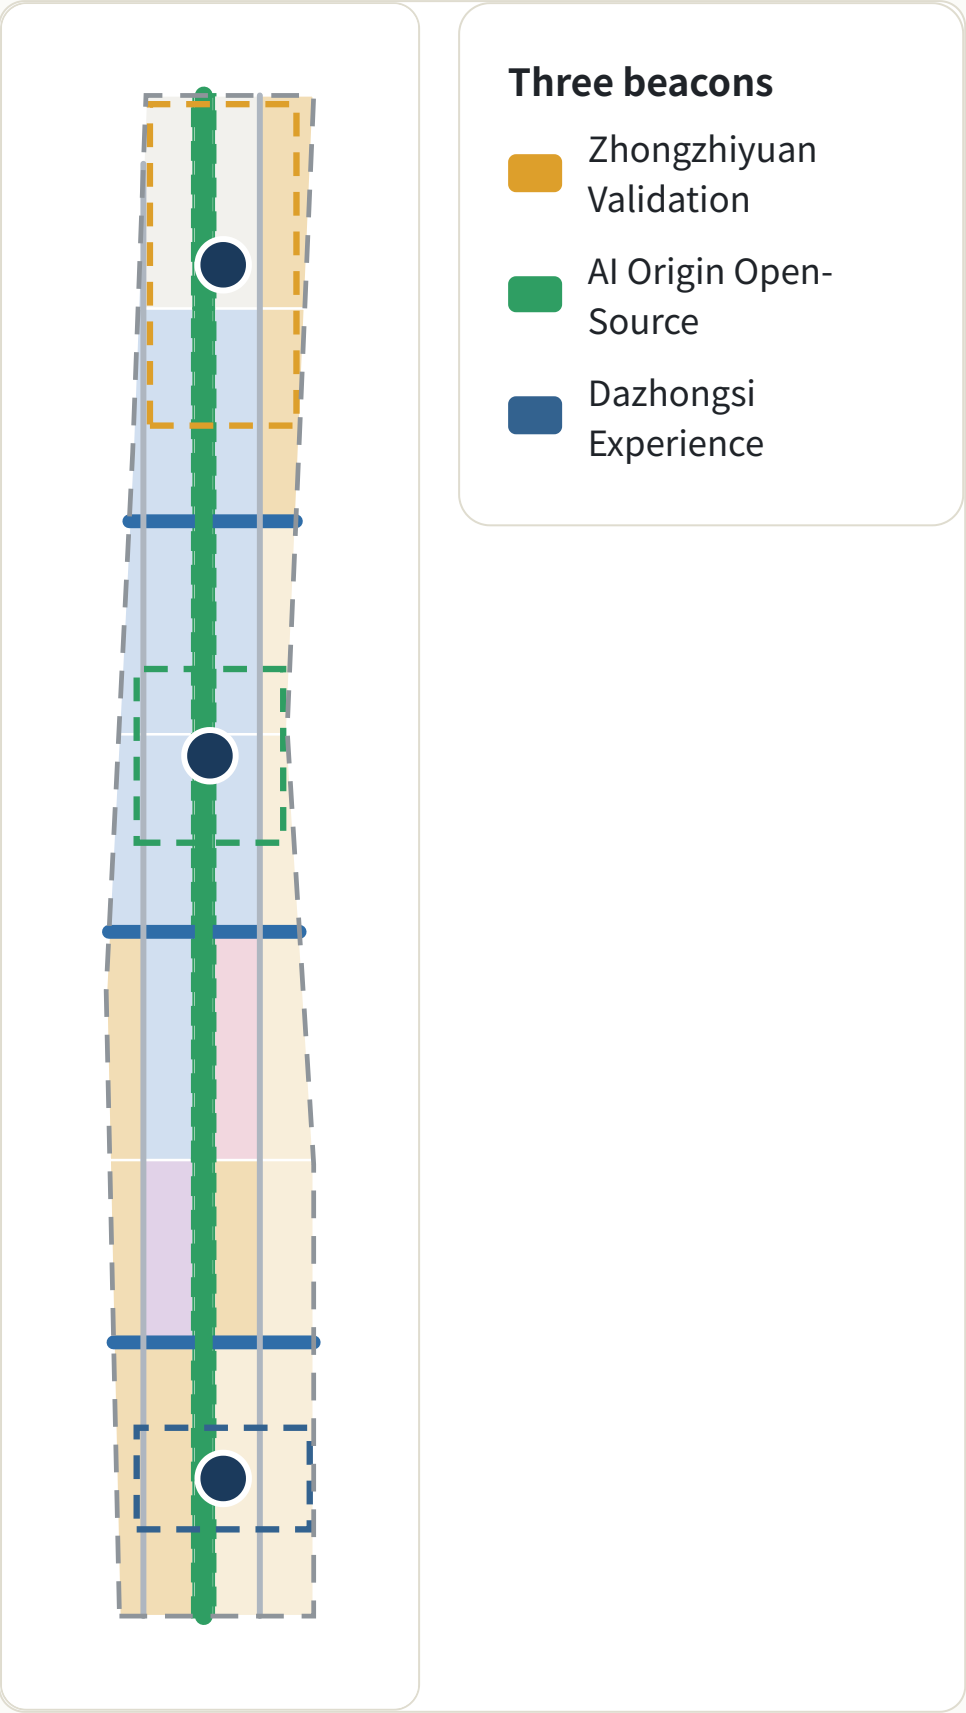

2 | Diagnosis and the Missing-Data Checklist

- Official SITE_BOUNDARY and three KEY_AREA polygons unavailable → all provisional.
- Regulatory controls missing: FAR, building height, density, setbacks, green ratio → kept unknown.
- Road redlines, station entrances/ridership, campus boundaries, ownership, heritage and blue-line data missing.
- Municipal pipelines, energy, fire, flood-drainage and service-facility baselines missing; no capacity checks.
- Operating baselines missing: satisfaction, appeal response, rollback rate and the 48-hour drill remain later indicators.
- Principle: register reasons and recalculation triggers per item; no pseudo-precision; organiser data gaps do not block content scoring.

3 | Research Area: the Signal Language and Seven Cases

- Green = experienceable (stable) | Amber = controlled testing (term-limited pilots) | Red = retired/rolled back (only meaning).
- Seven mechanism cases: Arup urban signals, Singapore Punggol, EU TEF, NIST AI RMF, Helsinki Kalasatama, London King's Cross, Hangzhou City Brain — mechanism only, no image transplant.
- Regional relay: Future Science City / Huairou sourcing → Zhongzhiyuan validation → Origin open-source → Dazhongsi experience → E-Town / Beijing-Tianjin-Hebei scale-up.
- Eight ecosystem interfaces: land, space, industry, funding, talent, compute, data, scenarios; each states applicant/reviewer/term/exit/knowledge output.
- District statistics only narrow the questions (e.g. 123 registered models); no manufactured targets.

4 | Overall Structure: One Spine, Three Beacons, Two Wings

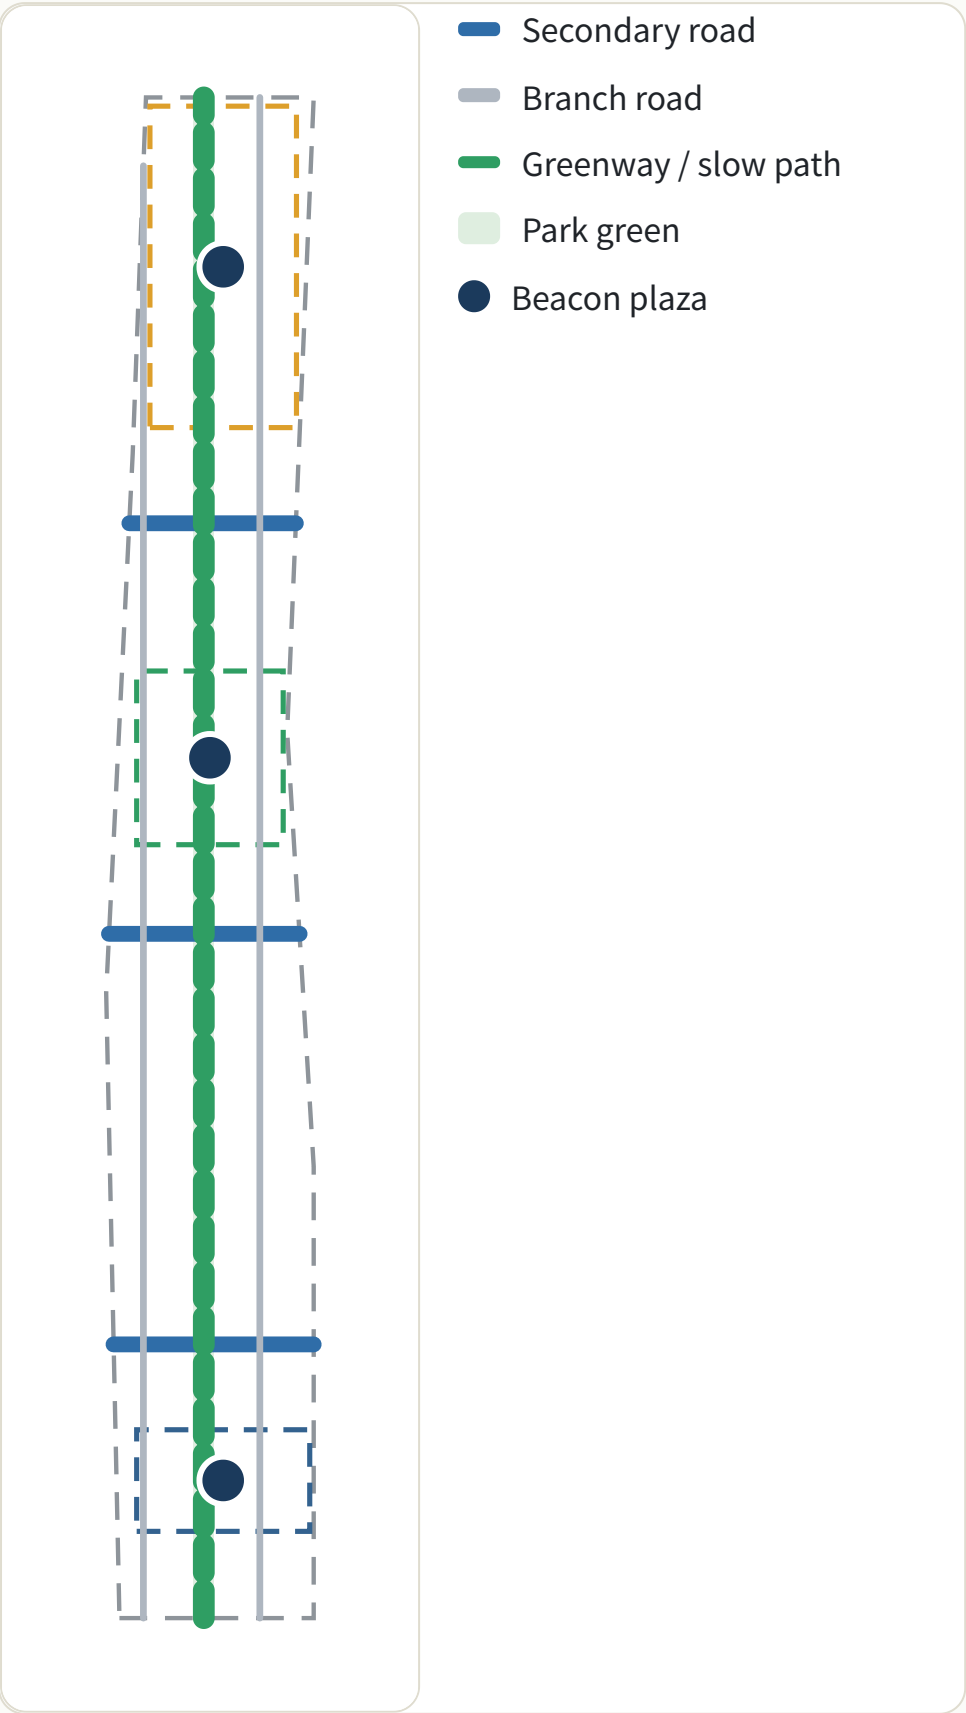

- Spine: the signal-spine green belt (east-west stitching, north-south continuity).
- Three beacons: validation (amber) / open source (green) / experience (blue).
- Two wings: Zhongguancun tech-service wing + Xiaoyuehe scenario-enablement wing.
- Supply rules: amber on terms, green stable, red recoverable.
- Spatial organisation: an addressable, stateful, replaceable signal grid.

5 | Land Use, Building Scale and Retain-Renovate-Demolish

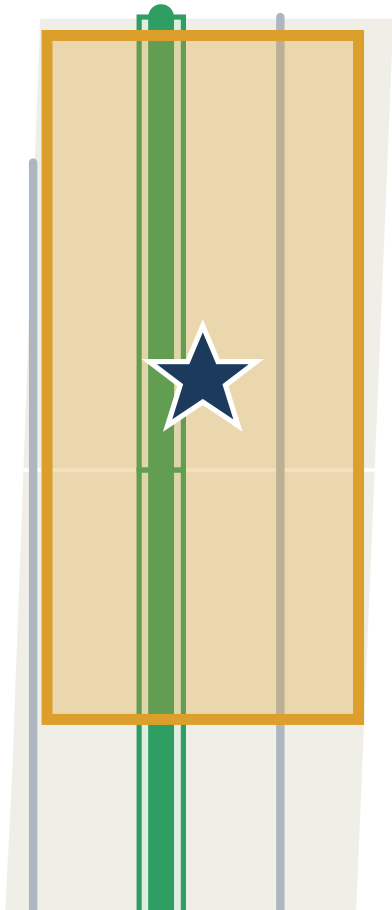

- 35 parcels fully cover the boundary; research 341.6 ha, commercial 256.2 ha, residential 251.0 ha.
- Green space approx. 129.5 ha along the spine; reserved approx. 83.0 ha keeps north-gateway flexibility.
- 107 concept footprints, density approx. 0.32; capacity logic only, no per-building retain/renovate/demolish conclusions.
- FAR and building height lack official controls; kept unknown with registered reasons.
- Retain/renovate/demolish stays conceptual, to be deepened by professional teams under statutory data.

6 | Transport, Rail, Municipal and Blue-Green Public Space

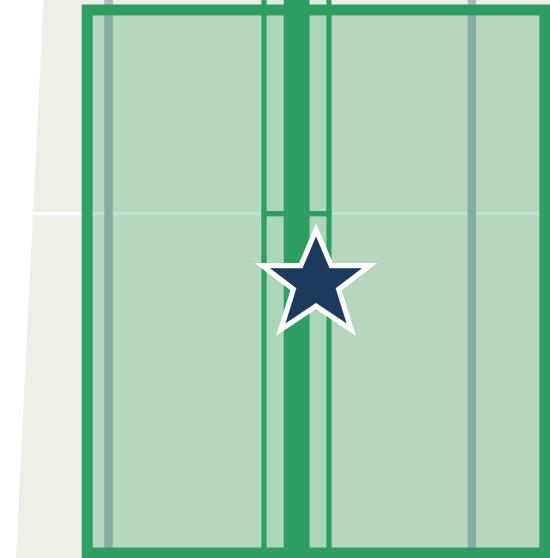

- Concept road network approx. 32.4 km; signal-spine greenway approx. 9.7 km.
- Focus: Dazhongsi station four quadrants, Wudaokou and Qinghua East Road West links, ring-road crossings.
- Green ratio approx. 11.3%; three beacon plazas approx. 4.1 ha.
- Public-space component library: removable, retractable, retirable; decommissioning restores the plain state.
- Rail interchange and road sections are directional strategies pending redlines and ridership data.

7 | Detailed Design of the Three Key Areas

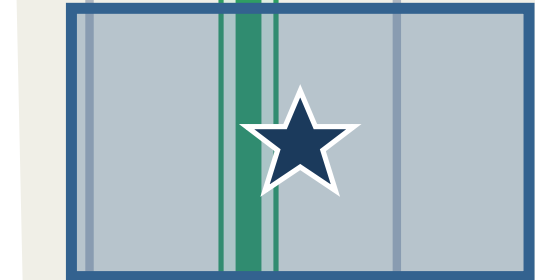

Zhongzhiyuan (amber)

3-tier validation gates, controlled lab cluster, public audit desk, riverside beacon lighthouse.

AI Origin (green)

open-source plaza, transfer street, campus stitching axis, open-source origin stone.

Dazhongsi (blue)

station four-quadrant walkability, international pitch lounge, temple signal bell.

- Identity uses brand colours (amber/green/blue); live status colours (green/amber/red) follow public audits.

8 | Renewal Projects and Phasing

JZ-01 | Spine slow-traffic gap stitching

Near term | depends on road redlines, under-bridge review

JZ-02 | Zhongzhiyuan Qinghe low-carbon interface

Near term | depends on blue line, flood conditions

JZ-03 | Origin campus transfer street

Near term | depends on campus boundary, ownership, ground floors

JZ-04 | Dazhongsi four-quadrant walkability

Mid term | depends on station, junctions, utilities

JZ-05 | Three beacon plazas

Mid term | depends on land permits, event safety, rights clearing

JZ-06 | AI public services and edge-compute nodes

Mid term | depends on energy, compute, safety, operator

JZ-07 | Global AI Week public route

Long term | depends on public-space permits, event safety

- The three phases are three merge gates (data, ownership, professional assessment), not a timetable.
- Annual evaluation gives a framework only: scenarios open, pilot completion, appeal response, rollback rate, satisfaction sampling.

9 | AI Scenarios, Personas and Long-Term Operations

SC-01 Open-source release hallG	SC-02 Model eval & red-team sandboxA	SC-03 Edge-compute depotG	SC-04 AI slow-traffic navigationG
SC-05 Dazhongsi pitch loungeG	SC-06 Qinghe low-carbon corridorA	SC-07 Campus transfer streetG	SC-08 Data-element loungeA
SC-09 AI living-service streetG	SC-10 Global AI Week routeG	SC-11 Full-stack controlled trialA	SC-12 City-agent public audit deskR

- 12 AI scenario cards (concept; 3 test/validation: SC-02, SC-11, SC-12).
- 5 personas: open-source developers, startup researchers, corporates/international visitors, residents, university members.
- Beacon Festival seasons: spring open-source week, summer controlled-testing season, autumn release week, winter governance review.
- Developer community stages: onboard → transfer → release → on-time.
- International voice: status transparency as urban governance discourse; funding/policy items remain concept directions.

10 | Metrics, Area Recalculation and Compliance Matrix

Site area 1,141.3 ha recomputed from site_boundary (provisional)	Key areas total 369.3 ha announcement approx. 368.4 ha; awaiting official polygons	Green ratio 11.3% green_space / site area	Public-space ratio 0.36% public_space / site area	Building density 0.32 107 concept footprint units
Land-use parcels 35 full coverage, no gaps	Scenario cards 12 including 3 test/validation	Personas / landmarks / cases 5 / 3 / 7 taskbook agent.2-4 coverage	FAR / building height unknown no official regulatory conditions; reasons registered	Self-check status 4 gates PASS KEY_AREA_PROVISIONAL disclosed

- Site 1,141.3 ha | key areas 369.3 ha (announcement approx. 368.4 ha; recompute on official polygons)
- Green ratio 11.3% | public-space ratio 0.36% | building density 0.32 (in-package, EPSG:4548)
- compliance_matrix: all 23 announcement 1.3/1.4/1.5 and agent.1–agent.6 requirements mapped.
- standard_matrix: mandatory standards fully covered; design_depth_matrix: core items all complete.
- self_check: four gates PASS (deterministic/spatial/visual/professional evidence), formal-review-ready.
- Spatial review notes KEY_AREA_PROVISIONAL ×3 disclosed; full-package recalculation once official data arrives.

11 | Risk, Copyright and Pending Materials

- risk.json: eight dimensions scored 1–5; top risks policy uncertainty 4/5 and implementation complexity 4/5 (human review paths attached).
- Compliance in two columns: statutory requirements (within scope) vs self-set human-centred goals; Doc. 45/2020 stays background_only.
- The 48-hour fault drill is a designed script (not executed); no claim of completed testing.
- Copyright: sources and licences for images, fonts, data and code in sources.json and copyright_statement.md.
- Pending: official boundary/key-area polygons, approved controls, redlines, ownership, heritage, municipal and operating baselines.
- No claim of official approval, approved controls, final ownership, final scale or guaranteed implementation.
