

NO GENERIC SOLUTION FOR JING-ZHANG

Three Site-Specific Spatial Rules for the AI Era

CORE PROPOSITION

Jing-Zhang does not need one all-purpose centre repeated three times. It needs a method that detects equivalent spatial consequences and changes spatial and project choices through site evidence.

DIFFERENT NAMES CAN SHARE ONE CONSEQUENCE

ONE CORRIDOR DOES NOT REQUIRE ONE FORM

AI GENERATION DOES NOT REPLACE PROFESSIONAL JUDGEMENT

30-SECOND SUMMARY

AI can generate many proposals quickly, but it can also reproduce the same centre, consolidated superblock and landmark complex across very different places. This proposal does not treat frequency as planning consensus. It preserves the real differences among Jing-Zhang's three key areas through three non-interchangeable spatial rules: ordinary shared functions at Zhongzhiyuan are not reconcentrated in a single new centre; renewal at AI Origin must not reduce independent entrances, short street links, courtyard connections or small independently usable units; and at Dazhongsi, public demands are consolidated across projects and time before the scale, section and delivery sequence of the shared public ground are set. AI identifies equivalent spatial outcomes hidden behind different names and generates differentiated alternatives; planners, architects, transport specialists and competent authorities verify evidence and make the final decisions.

EIGHT-PAGE READING PATH | EACH PAGE ADDS ONE NEW JUDGEMENT

02 PROBLEM

Detect equivalent consequences behind different names

03 STRUCTURE

Establish the shared connection and three design extents

04 ZHONGZHIYUAN

Decide whether ordinary shared functions should recentre

05 AI ORIGIN

Test whether renewal damages fine-grain urban fabric

06 DAZHONGSI

Use time-based demand to shape the public ground

07 USE

Test usability with six groups and twelve scenarios

08 IDENTITY + OPERATION

Build the belt identity, public objects and annual participation system

From batch generation back to real spatial consequences

SIX NAMES, FOUR RECURRING SPATIAL CONSEQUENCES

WHAT REPEATS IS THE SPATIAL CONSEQUENCE

- 01 ORDINARY SHARED FUNCTIONS RECENTRE
- 02 ENTRIES, SHORT LINKS AND COURTS ARE CONSOLIDATED
- 03 COMMERCIAL LANDMARK PRECEDES PUBLIC SPACE
- 04 PROJECTS CLAIM THE SAME PUBLIC IMPROVEMENT

AI-ASSISTED SPATIAL APPRAISAL

HOW THE PUBLIC REPOSITORY ENTERS THE PLANNING ARGUMENT

BOUNDARY OF AI SUPPORT

Consolidate public information, detect equivalent consequences and generate distinct options; do not replace regulatory, engineering or delivery decisions.

PROFESSIONAL PLANNING RESPONSIBILITY

Verify site conditions, spatial objects, public value and delivery relationships; explain the selected option and rejected alternatives.

One public connection, three non-interchangeable modes of renewal

PLANNING JUDGEMENT

The Jing-Zhang heritage park, rail and bus access, cross streets, continuous walking, blue-green space and basic public services form a shared connection. This connection does not require the three areas to adopt the same centre or landmark; the three spatial rules respectively govern the distribution of shared functions, retention of fine-grain streets and courtyards, and joint delivery of the public ground.

THREE DIFFERENT PLANNING QUESTIONS

ZHONGZHIYUAN

03

Can existing or planned premises carry ordinary shared functions?

Verify occupancy, adaptability and specialised physical requirements first.

AI ORIGIN

02

Will renewal reduce entrances, short links, courtyards or small usable units?

Verify structure, fire safety, use, entrances and courtyard relations first.

DAZHONGSI

01

How should multi-project, time-based demand jointly shape the public ground?

Verify time-based demand, works responsibility and acceptance extent first.

01

Jing-Zhang heritage public connection

02

Rail and bus access

03

Cross-city streets

04

Continuous walking and cycling

05

Blue-green space

06

Three key areas

Distribute ordinary shared functions across several premises; allow specialised new space only where physical requirements justify it

SPATIAL RULE

Meeting, exchange, everyday services and general incubation must not be reconcentrated in a single comprehensive centre; they should first be distributed among existing, under-construction or adaptable premises. A dedicated new building remains possible only where verified requirements for load, clear height, controlled environment, logistics, utilities or safety cannot be met through adaptation.

SPATIAL ELEMENTS

01 Existing or under-construction premises

02 Open ground floor

03 Distributed shared node

04 Open courtyard

05 Walking and transit connection

06 Specialised R&D and validation space (pending verification)

SPATIAL SECTION

VERIFY BEFORE DETAIL DESIGN

Verify occupancy, adaptability, time-sharing capacity and specialised physical requirements.

Renewal must not reduce independent entrances, short links, courtyards or small independently usable units

SPATIAL RULE

Renewal must not reduce independent entrances, short street links, courtyard connections or small independently usable units. Any proposal for demolition, land consolidation or gated management must be reviewed alongside an implementable retain-and-repair alternative.

SPATIAL ELEMENTS

- 01 Retained building
- 02 Independent entrance
- 03 Short street link
- 04 Shared courtyard
- 05 Open ground floor
- 06 Small independently usable unit / adaptive-reuse candidate (pink)

VERIFY BEFORE DETAIL DESIGN

Verify structure, fire safety, site protection, entrances, use and retain-and-repair feasibility.

Commuting, events, deliveries, night-time use and construction jointly set scale, section and sequence

THREE DEMAND LAYERS

- 01 Four-direction walking and accessibility
- 02 Cycle organisation
- 03 Station forecourt space
- 04 Public-service interface
- 05 Delivery and construction periods
- 06 Separate works package and acceptance extent

TIME-BASED DEMAND MATRIX | 0 NONE, 1 LOW, 2 MEDIUM, 3 HIGH; CONCEPTUAL, NOT MEASURED; SURVEY CALIBRATION PENDING

	AM PEAK	DAYTIME	PM PEAK	NIGHT EVENT	WORKS WINDOW
COMMUTE + TRANSFER	3	2	3	1	
WALKING + ACCESS	3	2	3	2	1
CYCLING	3	2	3	2	1
EVENT + NIGHT USE		1	1	3	
DELIVERY + MAINTENANCE		1		2	3
CONSTRUCTION					3

SCALE: DERIVED FROM OVERLAPPING PEAKS AND TIME-SHARING CAPACITY

SECTION: ACCOMMODATES MOVEMENT, STAY, CYCLING AND SERVICE

SEQUENCE: PUBLIC WORKS KEEP THEIR OWN PACKAGE, PROGRAMME AND ACCEPTANCE

AI forms options, professionals decide space, and public-service conditions determine whether work proceeds

AI-ASSISTED SPATIAL JUDGEMENT AND EXIT ARRANGEMENTS

EVIDENCE → AI SUPPORT → PROFESSIONAL DECISION → SPATIAL ACTION → STOP + RESTORE

Zhongzhiyuan		AI Origin		Dazhongsi	
Whether ordinary shared functions require new dedicated space		Whether consolidation-led renewal would damage the fine-grain street-and-courtyard network		How multiple projects jointly form and deliver the public ground	
EVIDENCE	Capacity, opening hours, adaptability and specialised physical requirements across existing, under-construction and adaptable premises.	EVIDENCE	Building-level safety, fire, ownership, use, entrances, short links, courtyard connections, small units and adaptability.	EVIDENCE	Cross-project and time-based evidence on commuting, events, deliveries, accessibility, cycling, public services, construction and responsibility.
AI SUPPORT	Align premises and requirements, distinguishing shareable, adaptable, specialised and evidence-missing items.	AI SUPPORT	Compare consolidation and retain-and-repair options by spatial consequence, flagging missing evidence and affected links.	AI SUPPORT	Consolidate demand, identifying overlap, conflict, time-sharing opportunities and duplicated public-improvement claims.
HUMAN DECISION	Planning, architecture, utilities and operations specialists verify conditions and decide sharing, adaptation or whether specialised new space remains justified.	HUMAN DECISION	Planning, architecture, fire, ownership and operations parties verify building-level conditions and decide retain-and-repair or limited reconstruction.	HUMAN DECISION	Transport, utilities, public-space, project-management and operations parties jointly set scale, section, sequence and responsibility.
SPATIAL ACTION	Distribute ordinary functions across multiple premises; new floor space serves only verified non-substitutable specialised conditions.	SPATIAL ACTION	Do not reduce independent entrances, short links, courtyard connections or small units unless repair is shown to be infeasible.	SPATIAL ACTION	Give each public improvement one ID with a separate works package, responsibility allocation and acceptance record that commercial opening cannot replace.
STOP + RESTORE	If evidence is incomplete or non-substitutability is unproven, do not initiate new space for ordinary shared functions; existing shared and staffed services continue.	STOP + RESTORE	If key evidence is missing, accessibility worsens or public movement is closed, pause consolidation, return to retain-and-repair review and retain existing access.	STOP + RESTORE	If continuous movement, accessibility, responsibility or independent acceptance is unresolved, commercial projects cannot claim the improvement early; basic routes and services remain open.

PUBLIC-USE AND PUBLIC-SERVICE GUARANTEES | IF ANY FAILS, THE INTELLIGENT LAYER STOPS AND EVERYDAY SERVICE CONTINUES

PG-01 • Basic service is not displaced	PG-02 • Physical accessibility first	PG-03 • Retain staffed and non-digital routes	PG-04 • Refusal does not reduce service	PG-05 • Restore everyday use after failure
Basic movement, public services and non-commercial rest are not displaced by display, testing, deliveries or commercial activity.	Continuous physical accessibility comes first; intelligent explanation cannot replace barrier removal or safety review.	Essential information, help and service retain staffed, paper or fixed-sign routes without requiring a phone or account.	People may refuse testing; refusal, complaint or non-use of AI cannot reduce basic service.	On failure, stop the intelligent layer, remove reversible facilities and record restoration of everyday use.

THREE FIRST-ROUND REVIEW TASKS | A VALID RESULT MAY BE NO BUILD, NO CONSOLIDATION OR NO DUPLICATE PROJECT CREDIT

Zhongzhiyuan	AI Origin	Dazhongsi
Complete one cross-premises capacity-to-specialised-need comparison; if non-substitutability is unproven, close the review with a sharing or adaptation option.	Select one entrance-short-link-courtyard sequence for parallel consolidation and retain-and-repair review; if unresolved, do not reduce existing links.	Select one cross-project public improvement and record one ID, service extent, responsibility and independent acceptance; unclear responsibility prevents duplicate project credit.

SIX USER GROUPS P01 Planning and project review officer • P02 Existing-premises and public-space operator • P03 Researcher, startup team and enterprise user • P04 Industry-validation and safety specialist • P05 Resident, commuter and everyday service user • P06 First-time visitor and international exchange participant	TWELVE SCENARIOS planning 3 • industry validation 3 • operations 3 • adaptive reuse 1 • public service 1 • culture 1
---	--

One belt identity, three place-specific public objects, and an accountable annual participation and conversion pathway

BELT BRAND ≠ PROPOSAL TITLE

CENTENNIAL JING-ZHANG AI INNOVATION BELT

NO GENERIC SOLUTION FOR JING-ZHANG

VISUAL DIRECTION: ONE CONTINUOUS LINE + THREE DISTINCT NODE SIGNS

3 POSITIONINGS—5 FUNCTIONS—3 AREAS + 2 WINGS

- 01

Centennial Jing-Zhang cultural belt

Global AI-governance discourse + new AI-enabled scenarios
- 02

Urban AI living-experience belt

New AI-enabled scenarios + intelligent and lively AI city
- 03

AI convergence and innovation belt

Full-stack AI innovation + world-class AI ecosystem + global AI-governance discourse

ADVISORY INTERFACES | NO EXISTING PARTNERSHIP

- 01

THREE PUBLIC IDENTITY OBJECTS | ACCESSIBLE, USABLE, MAINTAINABLE

01 Zhongzhiyuan Shared Foyer

- SPACE

Open ground floors, entrance forecourts and courtyards across existing, under-construction or adaptable premises.
- USE

Public arrival, short meetings, shared-service information, walking referrals and non-commercial stay.
- FORM

Use repeatable small-scale portal, service-desk and information-column elements for distributed identity rather than a new landmark complex.

Accessibility, maintenance and copyright boundaries are specified in the report and component table.

02 AI Origin Mended Streets and Courtyards

- SPACE

Public links among retained-building entrances, short streets, porches, courtyards, corner infill and small independently usable units.
- USE

Everyday passage, neighbourhood exchange, small displays, startup services and bookable shared activities.
- FORM

Use entrance markers, ground inlays and small lighting elements to reveal retained links, rather than replacing the network with one monumental object.

Accessibility, maintenance and copyright boundaries are specified in the report and component table.

03 Dazhongsi Public First Stop

- SPACE

Rail and bus arrival, four-direction walking junctions, accessible routes, station forecourt stay and public-service interfaces.
- USE

Interchange waiting, orientation, public services, short stays, safe night arrival and non-commercial rest.
- FORM

Combine direction columns, public time information, seating and services; no new station name or large media facade.

Accessibility, maintenance and copyright boundaries are specified in the report and component table.

OPEN CONTRIBUTION RECORD + PUBLIC-SPACE COMPONENT LIBRARY

Record verified public contributions, open material, professional review and later improvement at the three public identity objects and in the offline page, without allocating public prominence by sponsorship value.

- 01

Continuous accessible-arrival component
- 02

Opening-hours and service-information component
- 03

Reversible scenario-interface component
- 04

Public-stay and contribution-display component

ANNUAL PROGRAMME | JING-ZHANG OPEN FIELD (CONCEPT)

- 01

Spring | Open challenge release

—

02

Summer | Developer and scenario co-testing

—

03

Autumn | Public experience and professional review

—

04

Winter | International exchange and annual review

OPEN CHALLENGE → CONTROLLED VALIDATION → PUBLIC EXPERIENCE → ANNUAL REVIEW → REVIEWED FOLLOW-UP FOR TALENT / DEVELOPERS / ENTERPRISES / INTERNATIONAL COLLABORATION

All items are event and operation concepts. They do not claim an existing event brand, operator, partner, budget, investment policy, government commitment or implementation approval.
